## Chapter 1 Introduction

### 1.1 Introduction

Congratulations on your purchase of this outstanding product: M2M Cellular Gateway. For M2M (Machine-to-Machine) applications, AMIT M2M Cellular Gateway is absolutely the right choice. With built-in world-class 3G/4G module (\*<sup>1</sup>), you just need to insert SIM card from local mobile carrier to get to Internet. The redundant SIM design provides a more reliable WAN connection for critical applications. By VPN tunneling technology, remote sites easily become a part of Intranet, and all data are transmitted in a secure (256-bit AES encryption) link

Main Features:

- **Compact design:** Built-in LTE and configurable Ethernet WAN/LAN can provide Ethernet machine easy connection to internet/intranet by LTE or high reliable fail-over wired/LTE connection.
- **High Speed:** Built-in Giga LAN and 3G/4G can provide high bandwidth application requirement.
- **Dual SIM:** Embedded 3G/4G with configurable dual-SIM achieve location free multi-ISP fail-over requirement.
- **Versatile Cellular:** Preferred service selection can simplify uplink setting; toolkit function of data usage can control budget; configurable SMS command is useful and efficient for remote administration.
- **Complete Network:** Built-in NAT/Port Forward/Routing/IPv6 are compatible to existing IP network.
- **Highly Security:** Various VPN protocol & scenario can setup secure intranet; built-in Firewall & IPS prevent malicious attacks; ACL & Authentication by MAC /User enhances secure access.
- **Flexible Administration:** Web UI is used for basic setting; programmable CLI and Command Script is used for advanced configuration; system can be managed by NMS based on SNMP or TR-069.
- **Smart Event Handling:** Mechanism to manage action for pre-defined events by administrator. Events can be triggered or notified based on System/Interface status change, SMS, SNMP trap, or e-mail.
- **Expandable Design:** Reserved USB together with SDK can expand design easily for special application demand.

Before you install and use this product, please read this manual in detail for fully exploiting the functions of this product.

---

<sup>1</sup> IDG500-0P501 for 3G(HSPA+), IDG500-01501 for LTE cat.1, IDG500-0T501 for LTE cat.4, and IDG500-06501 for LTE cat. 6.

# M2M Cellular Gateway

## 1.2 Contents List

### 1.2.1 Package Contents

#### #Standard Package

Items	Description	Contents	Quantity
1	IDG500-0x501 M2M Cellular Gateway		1pcs
2	Cellular Antenna		2pcs
3	Power Adapter (DC 5V/2A) (* <sup>2</sup> )		1pcs
4	Male DC Jack to Screw Terminal Block Adaptor		1pcs
5	RJ45 Cable		1pcs
6	DIN-Rail Bracket		1set(2pcs)
7	Rubber Feet		4pcs
8	CD (Manual)		1pcs

<sup>2</sup> The maximum power consumption of IDG500-0x501 is 7.0W.

# M2M Cellular Gateway

## 1.3 Hardware Configuration

### ➤ Left View

### ➤ Right View

#### ※Reset Button

The RESET button provides user with a quick and easy way to resort the default setting. Press the RESET button continuously for 6 seconds, and then release it. The device will restore to factory default settings.

#### ※GPS Antenna

**The GNSS function is not available for some specific SKU. Even for the SKU with GNSS enabled, the GPS Antenna is an optional accessory, and not included in the standard package.** If you intend to use the provided GNSS function, please purchase additional passive-type GPS antenna and install it to the corresponding SMA connector in advance.

# M2M Cellular Gateway

## 1.4 LED Indication

Indication	LED Color	Description
WAN Uplink Status	Red , Green, or Blue	<p>When the LED color is:</p> <ul style="list-style-type: none"> <li>• <b>Blue:</b> Cellular Module is connected in LTE Mode</li> <li>• <b>Red:</b> Cellular Module is connected in HSPA/3G/GSM Mode</li> <li>• <b>Green:</b> Ethernet WAN Uplink is connected to uplink network</li> </ul> <p>Behavior of Blue LED (4G LTE connection):</p> <ul style="list-style-type: none"> <li>• <b>Dark:</b> SIM doesn't detect</li> <li>• <b>Flash (Fast):</b> Weak Signal, RSRP &lt; -104 dbm</li> <li>• <b>Flash (Slow, per 1.5~2 second):</b> Middle Signal, RSRP = -104 ~ -93 dbm</li> <li>• <b>Steady On:</b> Strong Signal, RSRP =&lt;- 92 dbm</li> </ul> <p>Behavior of Red LED (3G/2G connection):</p> <ul style="list-style-type: none"> <li>• <b>Dark:</b> SIM doesn't detect</li> <li>• <b>Flash (Fast):</b> Weak Signal, RSCP &lt; -102 dbm</li> <li>• <b>Flash (Slow, per 1.5~2 second):</b> Middle Signal, RSCP = -102 ~ -91 dbm</li> <li>• <b>Steady On:</b> Strong Signal, RSCP =&lt;- 90 dbm</li> </ul> <p>Behavior of Green LED (Ethernet WAN connection):</p> <ul style="list-style-type: none"> <li>• <b>Dark:</b> Not use Ethernet WAN uplink or doesn't connect Internet via Ethernet</li> <li>• <b>Green On:</b> Ethernet connection is established.</li> <li>• <b>Green in Flash:</b> data packet transferred via Ethernet.</li> </ul>
System Status	Red, or Blue	<p><b>Blue in flash (per second):</b> Device works normally.</p> <p><b>Red in very fast flash:</b> Device is in Recovery Mode or abnormal.</p> <p><b>Note:</b> If you encountered the abnormal situation, even power OFF / ON the device, there might be something wrong during the device boot up session and it was damaged. You need to call for RMA service to recover it.</p>
RJ45	Green	<p><b>Off:</b> Host disconnected.</p> <p><b>Green On:</b> Ethernet connection established.</p> <p><b>Green in Flash:</b> Data packet transferred via Ethernet.</p>

## 1.5 Installation & Maintenance Notice

### 1.5.1 SYSTEM REQUIREMENTS

<b>Network Requirements</b>	<ul style="list-style-type: none"><li>• An Gigabit Ethernet RJ45 cable or DSL modem</li><li>• 3G/4G cellular service subscription</li><li>• 10/100/1000 Ethernet adapter on PC</li></ul>
<b>Web-based Configuration Utility Requirements</b>	<p><b>Computer with the following:</b></p> <ul style="list-style-type: none"><li>• Windows®, Macintosh, or Linux-based operating system</li><li>• An installed Ethernet adapter</li></ul> <p><b>Browser Requirements:</b></p> <ul style="list-style-type: none"><li>• Internet Explorer 6.0 or higher</li><li>• Chrome 2.0 or higher</li><li>• Firefox 3.0 or higher</li><li>• Safari 3.0 or higher</li></ul>

### 1.5.2 WARNING

#### *Attention*

- Only use the power adapter that comes with the package. Using a different voltage rating power adaptor is dangerous and may damage the product.
- Do not open or repair the case yourself. If the product is too hot, turn off the power immediately and have it repaired at a qualified service center.
- Place the product on a stable surface and avoid using this product and all accessories outdoors.

## 1.5.3 HOT SURFACE CAUTION

**CAUTION:** The surface temperature for the metallic enclosure can be very high! Especially after operating for a long time, installed at a closed cabinet without air conditioning support, or in a high ambient temperature space.

**DO NOT touch the hot surface with your fingers while servicing!!**

# M2M Cellular Gateway

## 1.5.4 Product Information for CE RED Requirements

The following product information is required to be presented in product User Manual for latest CE RED requirements.<sup>3</sup>

### (1) Frequency Band & Maximum Power

#### 1.a Frequency Band for Cellular Connection (for ME3630 E1C version)<sup>4</sup>

Band number	Operating Frequency	Max output power
LTE FDD BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	23 ±2.7 dBm
LTE FDD BAND 3	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	
LTE FDD BAND 7	Uplink: 2500-2570 MHz Downlink: 2620-2690 MHz	
LTE FDD BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	
LTE FDD BAND 20	Uplink: 832-862 MHz Downlink: 791-821 MHz	
WCDMA BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	24 +1/-3 dBm
WCDMA BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	
E-GSM	Uplink: 880-915 MHz Downlink: 925-960 MHz	33 ±2 dBm
DCS	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	30 ±2 dBm

#### 1.b Frequency Band for Cellular Connection (for EC25-E version)

Band number	Operating Frequency	Max output power
LTE FDD BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	23.1 dBm
LTE FDD BAND 3	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	23.0 dBm
LTE FDD BAND 7	Uplink: 2500-2570 MHz Downlink: 2620-2690 MHz	22.8 dBm
LTE FDD BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	23.2 dBm
LTE FDD BAND 20	Uplink: 832-862 MHz	23.5 dBm

<sup>3</sup> The information presented in this section is ONLY valid for the EU/EFTA regional version. For those non-CE/EFTA versions, please refer to the corresponding product specification.

<sup>4</sup> There can be different cellular module integrated in the device for EU/EFTA regional version. Refer to the cellular module identifier printed on the device label for the purchased device.

# M2M Cellular Gateway

	Downlink: 791-821 MHz	
LTE FDD BAND 38	Uplink: 2570-2620 MHz Downlink: 2570-2620 MHz	21.7 dBm
LTE FDD BAND 40	Uplink: 2300-2400 MHz Downlink: 2300-2400 MHz	21.5 dBm
WCDMA BAND 1	Uplink: 1920-1980 MHz Downlink: 2110-2170 MHz	23.3 dBm
WCDMA BAND 8	Uplink: 880-915 MHz Downlink: 925-960 MHz	
E-GSM	Uplink: 880-915 MHz Downlink: 925-960 MHz	32.9 dBm
DCS	Uplink: 1710-1785 MHz Downlink: 1805-1880 MHz	29.9 dBm

## 1.c Frequency Band for Cellular Connection (for UC20-G version)

Band number	Operating Frequency	Max output power
WCDMA BAND 1	Uplink: 1922.4-1977.6 MHz Downlink: 2112.4-2167.6 MHz	22.47 dBm
WCDMA BAND 8	Uplink: 882.4-912.6 MHz Downlink: 927.4-957.6 MHz	22.48 dBm
E-GSM	Uplink: 880.2-914.8 MHz Downlink: 925.2-959.8 MHz	32.1 dBm
DCS	Uplink: 1710.2-1784.8 MHz Downlink: 1805.2-1879.8 MHz	28.9 dBm

## (2) DoC Information

You can get the DoC information of this product from the following URL:

<http://www.amit.com.tw/products-doc/>

## (3) RF Exposure Statements

The antenna of the product, under normal use condition, is at least 20 cm away from the body of user.

# M2M Cellular Gateway

## 1.6 Hardware Installation

This chapter describes how to install and configure the hardware

### 1.6.1 Mount the Unit

The IDG500 series products can be placed on a desktop, or mounted on the wall.

### 1.6.2 Insert the SIM Card

**WARNING: BEFORE INSERTING OR CHANGING THE SIM CARD, PLEASE MAKE SURE THE GATEWAY IS POWERED OFF.**

The SIM card slots are located at the right side of IDG500 series housing in order to protect the SIM card. You need to unscrew and remove the outer SIM card cover before installing or removing the SIM card. Please follow the instructions to insert or eject a SIM card. After SIM card is well placed, screw back the outer SIM card cover.

#### Step 1:

Loosen the screws as below and remove the SIM cover.

#### Step 2:

Push the SIM card into the slot A (SIM-A) or slot B (SIM-B).

#### Step 3:

Push the inserted SIM card again to eject it from the SIM slot.

# M2M Cellular Gateway

## 1.6.3 Install the External Antenna

As illustrated in Section 1.3, there are several SMA antenna Jacks for you to install the required antennas for the RF signal transmission and receiving. You may have to purchase required RF cables and antennas separately for a specific project or installation site to get excellent RF performance.

Since there is limited spacing for allocating all SMA antenna Jacks around the enclosure, the separation among SMA Jacks (or direct-attached antennas) could be not the optimized arrangement. It is very likely to get degraded RF performance at specific circumstances. It depends heavily on the environment.

However, there are well-known rules of thumb for solving the antenna separation issue.

**1: The horizontal distance between antennas should be greater than 1/4 of its wavelength, and there will be best separation at 1/2 of its wavelength.**

**2. If multiple frequency antennas are near each other, then use spacing distance of the lower frequency antenna, or even better try to satisfy the rule for both frequencies.**

**Wavelength Table for Major RF Category**

RF Category	Frequency	Wavelength	1/2 Wave Length (Best Separation)	1/4 Wave Length (Good Separation)
WiFi 802.11	5.8GHz	5.2cm	2.6cm	1.3cm
WiFi 802.11	2.4GHz	12.5cm	6.2cm	3.1cm
Cellular LTE	2600MHz	11.5cm	5.8cm	2.9cm
Cellular LTE	2100MHz	14.3cm	7.1cm	3.7cm
Cellular LTE	900MHz	33.3cm	16.6cm	8.3cm
Cellular LTE	700MHz	42.8cm	21.4cm	10.7cm
GPS	1.57GHz	19.0cm	9.5cm	4.7cm

For example, if you have a 900MHz LTE antenna and a WiFi 2.4GHz antenna, you would want them to be separated by at least 8.3cm to get good antenna separation.

**So, it is recommended to use some external RF cables to extend and separate the adjacent antennas and get better antenna separation and RF performance, if required.**

# M2M Cellular Gateway

---

## 1.6.4 Connecting Power

There are a DC5V/2A power adapter<sup>5</sup> and a 2-pin terminal block to DC Plug converter in the package for you to easily connect DC power to this gateway.

**WARNING: This commercial-grade power adapter is mainly for ease of powering up the purchased device while initial configuration. It's not for operating at wide temperature range environment. PLEASE PREPARE OR PURCHASE OTHER INDUSTRIAL-GRADE POWER SUPPLY FOR POWERING UP THE DEVICE.**

## 1.6.5 Connecting to the Network or a Host

The IDG500-0x501 series products provide two RJ45 port to connect 10/100/1000Mbps Ethernet. It can auto detect the transmission speed on the network and configure itself automatically. Connect one Ethernet cable to the RJ45 port (LAN) of the device and plug another end of the Ethernet cable into your computer's network port. In this way, you can use the RJ45 Ethernet cable to connect the device to the host PC's Ethernet port for configuring the device.

---

<sup>5</sup> The maximum power consumption of IDG500-0x501 is 7.0W.

# M2M Cellular Gateway

---

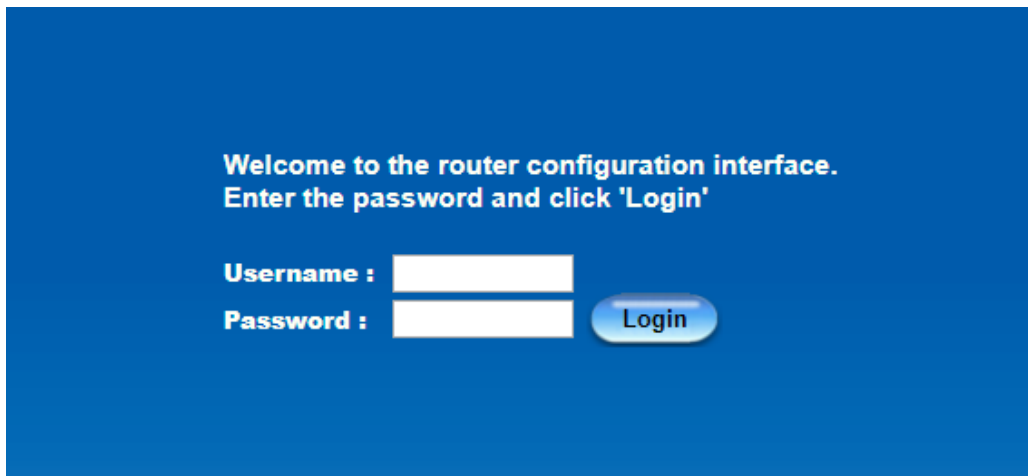

## 1.6.6 Setup by Configuring WEB UI

You can browse web UI to configure the device.

Type in the IP Address (<http://192.168.123.254>)<sup>6</sup>

When you see the login page, enter the user name and password and then click **'Login'** button. The default setting for both username and password is **'admin'**<sup>7</sup>.

---

<sup>6</sup> The default LAN IP address of this gateway is 192.168.123.254. If you change it, you need to login by using the new IP address.

<sup>7</sup> For security consideration, you are strongly recommended to change the login username and password from default values. Refer to Section 6.1.2 for how to change the setting.

## Chapter 2 Basic Network

### 2.1 WAN & Uplink

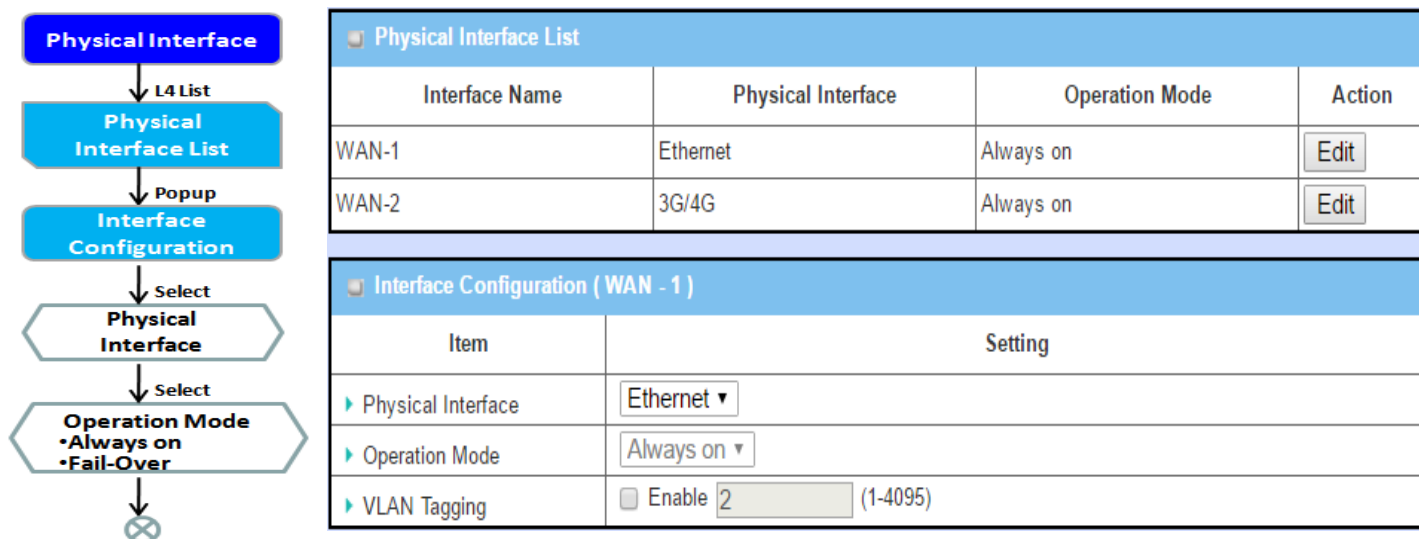

Interface Name	Physical Interface	Operation Mode	Line Speed	Action
WAN-1	Ethernet	Always on	1000 (Mbps) / 1000 (Mbps)	<a href="#">Edit</a>
WAN-2	3G/4G	Always on	150 (Mbps) / 150 (Mbps)	<a href="#">Edit</a>
WAN-3	-	Disable	0 (Mbps) / 0 (Mbps)	<a href="#">Edit</a>
WAN-4	-	Disable	0 (Mbps) / 0 (Mbps)	<a href="#">Edit</a>

The gateway provides multiple WAN interfaces to let all client hosts in Intranet of the gateway access the Internet via ISP. But ISPs in the world apply various connection protocols to let gateways or user's devices dial in ISPs and then link to the Internet via different kinds of transmit media.

So, the WAN Connection lets you specify the WAN Physical Interface, WAN Internet Setup and WAN Load Balance for Intranet to access Internet. For each WAN interface, you must specify its physical interface first and then its Internet setup to connect to ISP. Besides, since the gateway has multiple WAN interfaces, you can assign physical interface to participate in the Load Balance function.

# M2M Cellular Gateway

## 2.1.1 Physical Interface

M2M gateways are usually equipped with various WAN interfaces to support different WAN connection scenario for requirement. You can configure the WAN interface one by one to get proper internet connection setup. **Refer to the product specification for the available WAN interfaces in the product you purchased.**

The first step to configure one WAN interface is to specify which kind of connection media to be used for the WAN connection, as shown in "Physical Interface" page.

In "Physical Interface" page, there are two configuration windows, "Physical Interface List" and "Interface Configuration". "Physical Interface List" window shows all the available physical interfaces. After clicking on the "Edit" button for the interface in "Physical Interface List" window the "Interface Configuration" window will appear to let you configure a WAN interface.

### **Physical Interface:**

- **Ethernet WAN:** The gateway has one or more RJ45 WAN ports that can be configured to be WAN connections. You can directly connect to external DSL modem or setup behind a firewall device.
- **3G/4G WAN:** The gateway has one built-in 3G/4G cellular as WAN connection. For each cellular WAN, there are 1 or 2 SIM cards to be inserted for special failover function.

# M2M Cellular Gateway

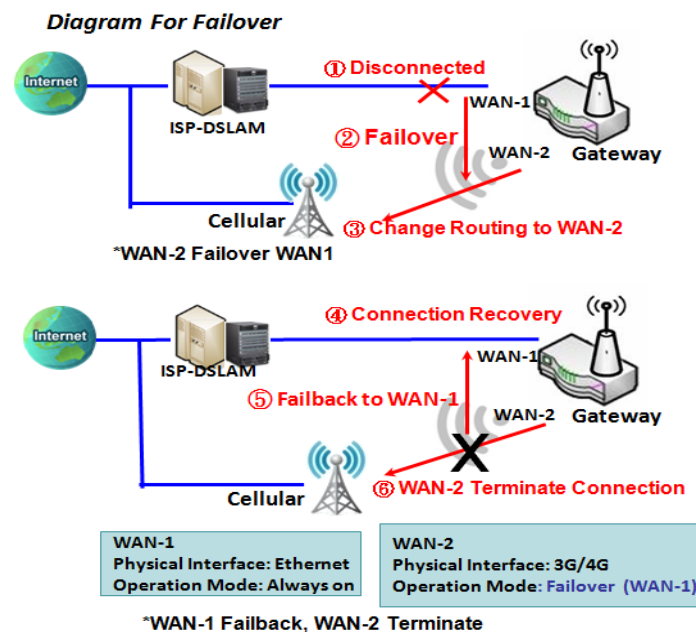

- Please **MUST POWER OFF** the gateway before you insert or remove SIM card.
- The SIM card can be damaged if you insert or remove SIM card while the gateway is in operation.

## Operation Mode:

There are three option items “Always on”, “Failover”, and “Disable” for the operation mode setting.

**Always on:** Set this WAN interface to be active all the time. When two or more WAN are established at "Always on" mode, outgoing data will through these WAN connections base on load balance policies.

## Failover:

A failover interface is a backup connection to the primary. That means only when its primary WAN connection is broken, the backup connection will be started up to substitute the primary connection. As shown in the diagram, WAN-2 is backup WAN for WAN-1. WAN-1 serves as the primary connection with operation mode "Always on". WAN-2 won't be activated until WAN-1 disconnected. When WAN-1 connection is recovered back with a connection, it will take over data traffic again. At that time, WAN-2 connection will be terminated.

# M2M Cellular Gateway

## Seamless Failover:

In addition, there is a "Seamless" option for Failover operation mode. When seamless option is activated by checking on the "Seamless" box in configuration window, both the primary connection and the failover connection are started up after system rebooting. But only the primary connection executes the data transfer, while the failover one just keeps alive of connection line. As soon as the primary connection is broken, the system will switch, meaning failover, the routing path to the failover connection to save the dial up time of failover connection since it has been alive.

When the "Seamless" enable checkbox is activated, it can allow the Failover interface to be connected continuously from system booting up. Failover WAN interface just keeps connecting without data traffic.

The purpose is to shorten the switch time during failover process. So, when primary connection is disconnected, failover interface will take over the data transfer mission instantly by only changing routing path to the failover interface. The dialing-up time of failover connection is saved since it has been connected beforehand.

## VLAN Tagging

Sometimes, your ISP required a VLAN tag to be inserted into the WAN packets from Gateway for specific services. Please enable VLAN tagging and specify tag in the WAN physical interface. Please be noted that only Ethernet and ADSL physical interfaces support the feature. For the device with 3G/4G WAN only, it is disabled.

# M2M Cellular Gateway

## Physical Interface Setting

Go to **Basic Network > WAN > Physical Interface** tab.

The Physical Interface allows user to setup the physical WAN interface and to adjust WAN's behavior.

Note: Numbers of available WAN Interfaces can be different for the purchased gateway.

Physical Interface List			
Interface Name	Physical Interface	Operation Mode	Action
WAN-1	Ethernet	Always on	<input type="button" value="Edit"/>
WAN-2	3G/4G	Always on	<input type="button" value="Edit"/>

When **Edit** button is applied, an **Interface Configuration** screen will appear. WAN-1 interface is used in this example.

### Interface Configuration:

Interface Configuration ( WAN - 1 )	
Item	Setting
▶ Physical Interface	<input type="text" value="Ethernet"/>
▶ Operation Mode	<input type="text" value="Always on"/>
▶ VLAN Tagging	<input type="checkbox"/> Enable <input type="text" value="2"/> (1-4095)

Interface Configuration		
Item	Value setting	Description
<b>Physical Interface</b>	1. A Must fill setting 2. WAN-1 is the primary interface and is factory set to Always on.	Select one expected interface from the available interface dropdown list. Depending on the gateway model, <b>Disable</b> and <b>Failover</b> options will be available only to multiple WAN gateways. WAN-2 ~ WAN-4 interfaces are only available to multiple WAN gateway.
<b>Operation Mode</b>	A Must fill setting	Define the operation mode of the interface. Select <b>Always on</b> to make this WAN always active. Select <b>Disable</b> to disable this WAN interface. Select <b>Failover</b> to make this WAN a Failover WAN when the primary or the

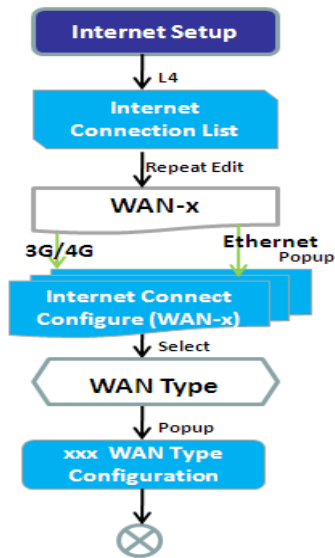

# M2M Cellular Gateway

---

		<p>secondary WAN link failed. Then select the primary or the existed secondary WAN interface to switch Failover from.</p> <p>(Note: for WAN-1, only <b>Always on</b> option is available.)</p>

## 2.1.2 Internet Setup

Internet Connection List				
Interface Name	Physical Interface	Operation Mode	WAN Type	Action
WAN-1	Ethernet	Always on	Dynamic IP	<input type="button" value="Edit"/>
WAN-2	3G/4G	Always on	3G/4G	<input type="button" value="Edit"/>

Internet Connection Configuration ( WAN - 1 )	
Item	Setting
▶ WAN Type	Dynamic IP ▾

Dynamic IP WAN Type Configuration	
Item	Setting
▶ Host Name	<input type="text"/> (Optional)
▶ ISP Registered MAC Address	<input type="text"/> <input type="button" value="Clone"/> (Optional)
▶ Connection Control	Auto-reconnect ▾
▶ MTU	0 <input type="text"/> (0 is Auto)
▶ NAT	<input checked="" type="checkbox"/> Enable

After specifying the physical interface for each WAN connection, administrator must configure their connection profile to meet the dial in process of ISP, so that all client hosts in the Intranet of the gateway can access the Internet.

In "Internet Setup" page, there are some configuration windows: "Internet Connection List", "Internet Connection Configuration", "WAN Type Configuration" and related configuration windows for each WAN type. For the Internet setup of each WAN interface, you must specify its WAN type of physical interface first and then its related parameter configuration for that WAN type.

After clicking on the "Edit" button of a physical interface in "Internet Setup List" window, the "Internet Connection Configuration" window will appear to let you specify which kind of WAN type that you will use for that physical interface to make an Internet connection. Based on your chosen WAN type, you can configure necessary parameters in each corresponding configuration window.

### WAN Type for Ethernet Interface:

Ethernet is the most common WAN and uplink interface for M2M gateways. Usually it is connected with xDSL or cable modem for you to setup the WAN connection. There are various WAN types to connect with ISP.

- **Static IP:** Select this option if ISP provides a fixed IP to you when you subscribe the service. Usually is more expensive but very important for cooperate requirement.
- **Dynamic IP:** The assigned IP address for the WAN by a DHCP server is different every time. It is cheaper and usually for consumer use.
- **PPP over Ethernet:** As known as PPPoE. This WAN type is widely used for ADSL connection. IP is usually different for every dial up.
- **PPTP:** This WAN type is popular in some countries, like Russia.
- **L2TP :** This WAN type is popular in some countries, like Israel.

### Configure Ethernet WAN Setting

When **Edit** button is applied, **Internet Connection Configuration** screen will appear. WAN-1 interface is used in this example.

## WAN Type = Dynamic IP

Internet Connection Configuration ( WAN - 1 )	
Item	Setting
▶ WAN Type	Dynamic IP ▼

When you select it, "Dynamic IP WAN Type Configuration" will appear. Items and setting is explained below

Dynamic IP WAN Type Configuration	
Item	Setting
▶ Host Name	<input type="text"/> (Optional)
▶ ISP Registered MAC Address	<input type="text"/> <input type="button" value="Clone"/> (Optional)

Dynamic IP WAN Type Configuration		
Item	Value setting	Description
Host Name	An optional setting	Enter the host name provided by your Service Provider.
ISP Registered MAC Address	An optional setting	Enter the MAC address that you have registered with your service provider. Or Click the <b>Clone</b> button to clone your PC's MAC to this field. Usually this is the PC's MAC address assigned to allow you to connect to Internet.

## WAN Type= Static IP

Internet Connection Configuration ( WAN - 1 )	
Item	Setting
▶ WAN Type	Static IP ▼

When you select it, "Static IP WAN Type Configuration" will appear. Items and setting is explained below

Static IP WAN Type Configuration	
Item	Setting
▶ WAN IP Address	<input type="text"/>
▶ WAN Subnet Mask	255.255.255.0 (/24) ▼
▶ WAN Gateway	<input type="text"/>
▶ Primary DNS	<input type="text"/>
▶ Secondary DNS	<input type="text"/> (Optional)

# M2M Cellular Gateway

Static IP WAN Type Configuration		
Item	Value setting	Description
<b>WAN IP Address</b>	A Must filled setting	Enter the WAN IP address given by your Service Provider
<b>WAN Subnet Mask</b>	A Must filled setting	Enter the WAN subnet mask given by your Service Provider
<b>WAN Gateway</b>	A Must filled setting	Enter the WAN gateway IP address given by your Service Provider
<b>Primary DNS</b>	A Must filled setting	Enter the primary WAN DNS IP address given by your Service Provider
<b>Secondary DNS</b>	An optional setting	Enter the secondary WAN DNS IP address given by your Service Provider

## WAN Type= PPPoE

Internet Connection Configuration ( WAN - 1 )	
Item	Setting
▶ WAN Type	PPPoE ▼

When you select it, "PPPoE WAN Type Configuration" will appear. Items and setting is explained below

PPPoE WAN Type Configuration	
Item	Setting

## Ethernet Connection Common Configuration

▶ Connection Control	Auto-reconnect ▾
▶ MTU Setup	<input type="checkbox"/> Enable
▶ NAT	<input checked="" type="checkbox"/> Enable
▶ IGMP	Disable ▾
▶ WAN IP Alias	<input type="checkbox"/> Enable 10.0.0.1

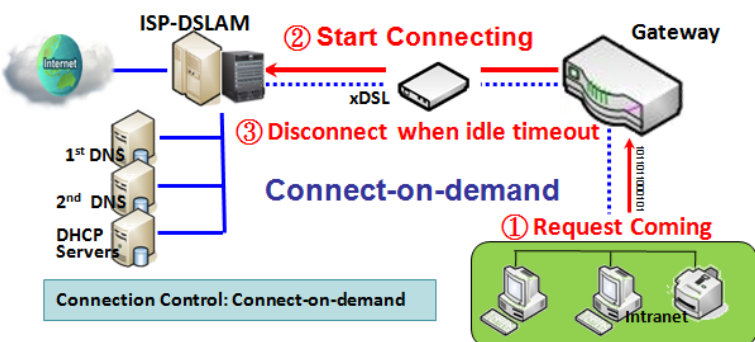

Network Monitoring Configuration	
Item	Setting
▶ Network Monitoring Configuration	<input checked="" type="checkbox"/> Enable
▶ Checking Method	DNS Query ▾
▶ Loading Check	<input checked="" type="checkbox"/> Enable
▶ Query Interval	5 (seconds)
▶ Latency Threshold	3000 (ms)
▶ Fail Threshold	5 (Times)
▶ Target1	DNS1 ▾
▶ Target2	None ▾

There are some important parameters to be setup no matter which Ethernet WAN type is selected. You should follow up the rule to configure.

### Connection Control.

**Auto-reconnect:** This gateway will establish Internet connection automatically once it has been booted up, and try to reconnect once the connection is down. It's recommended to choose this scheme if for mission critical applications to ensure full-time Internet connection.

**Connect-on-demand:** This gateway won't start to establish Internet connection until local data is going to be sent to WAN side. After normal data transferring between LAN and WAN sides, this gateway will disconnect WAN connection if idle time reaches value of Maximum Idle Time.

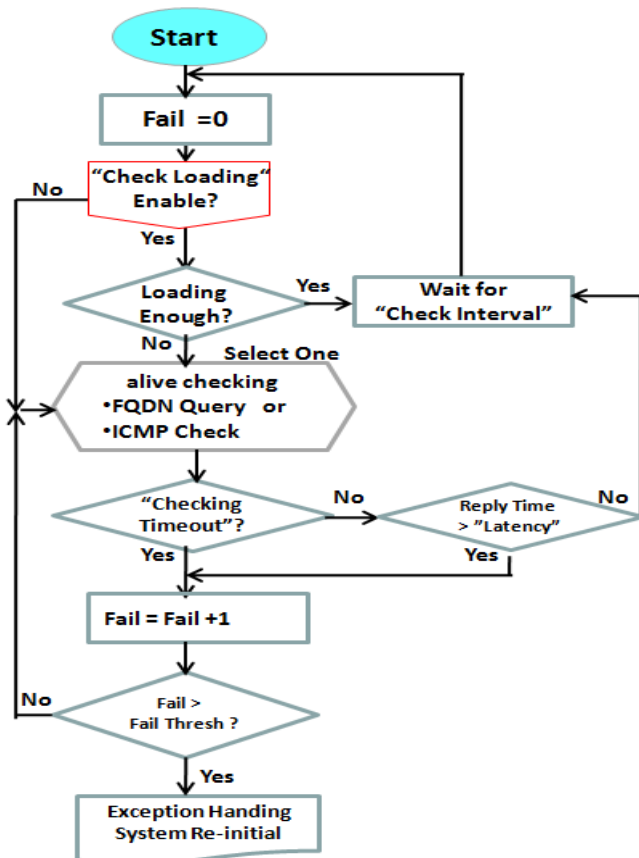

# M2M Cellular Gateway

**Manually:** This gateway won't start to establish WAN connection until you press "Connect" button on web UI. After normal data transferring between LAN and WAN sides, this gateway will disconnect WAN connection if idle time reaches value of Maximum Idle Time.

Please be noted, if the WAN interface serves as the primary one for another WAN interface in Failover role, the Connection Control parameter will not be available to you to configure as the system must set it to "Auto-reconnect (Always on)".

## Network Monitoring

It is necessary to monitor connection status continuous. To do it, "ICMP Check" and "FQDN Query" are used to check. When there is traffic of connection, checking packet will waste bandwidth. Response time of replied packets may also increase. To avoid "Network Monitoring" work abnormally, enabling "Checking Loading" option will stop connection check when there is traffic. It will wait for another "Check Interval" and then check loading again.

When you do "Network Monitoring", if reply time longer than "Latency" or even no response longer than "Checking Timeout", "Fail" count will be increased. If it is continuous and "Fail" count is more than "Fail Threshold", gateway will do exception handling process and re-initial this connection again. Otherwise, network monitoring process will be start again.

# M2M Cellular Gateway

## Set up “Ethernet Common Configuration”

Ethernet WAN Common Configuration		
Item	Value setting	Description
Connection Control	A Must filled setting	<p>There are three connection modes.</p> <ul style="list-style-type: none"> <li>● <b>Auto-reconnect</b> enables the router to always keep the Internet connection on.</li> <li>● <b>Connect-on-demand</b> enables the router to automatically re-establish Internet connection as soon as user attempts to access the Internet. Internet connection will be disconnected when it has been inactive for a specified idle time.</li> <li>● <b>Connect Manually</b> allows user to connect to Internet manually. Internet connection will be inactive after it has been inactive for specified idle time.</li> </ul>
Maximum Idle Time	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. By default <b>600</b> seconds is filled-in</li> </ol>	<p>Specify the maximum Idle time setting to disconnect the internet connection when the connection idle timed out.</p> <p><b>Value Range:</b> 300 ~ 86400.</p> <p><b>Note:</b> This field is available only when <b>Connect-on-demand</b> or <b>Connect Manually</b> is selected as the connection control scheme.</p>
MTU Setup	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. <b>Uncheck</b> by default</li> </ol>	<p>Check the Enable box to enable the MTU (Maximum Transmission Unit) limit, and specify the <b>MTU</b> for the 3G/4G connection.</p> <p><b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission.</p> <p><b>Value Range:</b> 1200 ~ 1500.</p>
MTU Setup	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. <b>Auto</b> (value zero) is set by default</li> <li>3. Manual set range 1200~1500</li> </ol>	<p><b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission.</p> <p>When set to <b>Auto</b> (value '0'), the router selects the best MTU for best Internet connection performance.</p>
NAT	<ol style="list-style-type: none"> <li>1. An optional setting</li> <li>2. NAT is enabled by default</li> </ol>	<p>Enable NAT to apply NAT on the WAN connection. Uncheck the box to disable NAT function.</p>
Network Monitoring	<ol style="list-style-type: none"> <li>1. An optional setting</li> <li>2. Enabled by default</li> </ol>	<p>When the Network Monitoring feature is enabled, the gateway will use DNS Query or ICMP to periodically check Internet connection –connected or disconnected.</p> <ul style="list-style-type: none"> <li>● Choose either <b>DNS Query</b> or <b>ICMP Checking</b> to detect WAN link. With <b>DNS Query</b>, the system checks the connection by sending DNS Query packets to the destination specified in Target 1 and Target 2. With <b>ICMP Checking</b>, the system will check connection by sending ICMP request packets to the destination specified in Target 1 and Target 2.</li> <li>● <b>Loading Check</b> Enable Loading Check allows the router to ignore unreturned DNS Queries or ICMP requests when WAN bandwidth is fully occupied. This is to prevent false link-down status.</li> <li>● <b>Check Interval</b> defines the transmitting interval between two DNS Query or ICMP checking packets.</li> <li>● <b>Check Timeout</b> defines the timeout of each DNS query/ICMP.</li> <li>● <b>Latency Threshold</b> defines the tolerance threshold of responding time.</li> <li>● <b>Fail Threshold</b> specifies the detected disconnection before the router recognize the WAN link down status. Enter a number of detecting</li> </ul>

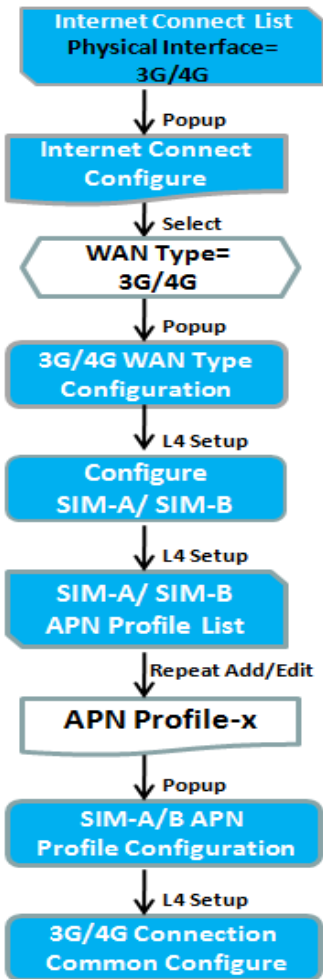

# M2M Cellular Gateway

		<p>disconnection times to be the threshold before disconnection is acknowledged.</p> <ul style="list-style-type: none"> <li>● <b>Target1 (DNS1 set by default)</b> specifies the first target of sending DNS query/ICMP request. <ul style="list-style-type: none"> <li>■ <b>DNS1:</b> set the primary DNS to be the target.</li> <li>■ <b>DNS2:</b> set the secondary DNS to be the target.</li> <li>■ <b>Gateway:</b> set the Current gateway to be the target.</li> <li>■ <b>Other Host:</b> enter an IP address to be the target.</li> </ul> </li> <li>● <b>Target2 (None set by default)</b> specifies the second target of sending DNS query/ICMP request. <ul style="list-style-type: none"> <li>■ <b>None:</b> to disable <b>Target2</b>.</li> <li>■ <b>DNS1:</b> set the primary DNS to be the target.</li> <li>■ <b>DNS2:</b> set the secondary DNS to be the target.</li> <li>■ <b>Gateway:</b> set the Current gateway to be the target.</li> <li>■ <b>Other Host:</b> enter an IP address to be the target.</li> </ul> </li> </ul>
<b>IGMP</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. Disable is set by default</li> </ol>	<p>Enable IGMP (Internet Group Management Protocol) would enable the router to listen to IGMP packets to discover which interfaces are connected to which device. The router uses the interface information generated by IGMP to reduce bandwidth consumption in a multi-access network environment to avoid flooding the entire network.</p>
<b>WAN IP Alias</b>	<ol style="list-style-type: none"> <li>1. An optional setting</li> <li>2. <b>Uncheck</b> by default</li> </ol>	<p>Enable <b>WAN IP Alias</b> then enter the IP address provided by your service provider.  <b>WAN IP Alias</b> is used by the device router and is treated as a second set of WAN IP to provide dual WAN IP address to your LAN network.</p>
<b>Save</b>	<i>N/A</i>	Click <b>Save</b> to save the settings.
<b>Undo</b>	<i>N/A</i>	Click <b>Undo</b> to cancel the settings.

### Preferred SIM Card – Dual SIM Fail Over

For 3G/4G embedded device, one embedded cellular module can create only one WAN interface. This device has featured by using dual SIM cards for one module with special fail-over mechanism. It is called Dual SIM Failover. This feature is useful for ISP switch over when location is changed. Within “Dual SIM Failover”, there are various usage scenarios, including "SIM-A First", "SIM-B First“ with “Failback” enabled or not, and “SIM-A Only and “SIM-B Only”.

# M2M Cellular Gateway

**SIM-A/SIM-B only:** When “SIM-A Only” or “SIM-B Only” is used, the specified SIM slot card is the only one to be used for negotiation parameters between gateway device and cellular ISP.

## SIM-A / SIM-B first without enable Failback

By default, “SIM-A First” scenario is used to connect to cellular ISP for data transfer. In the case of “SIM-A First” or “SIM-B First” scenario, the gateway will try to connect to the Internet by using SIM-A or SIM-B card first. And when the connection is broken, the gateway will switch to use the other SIM card for an alternate automatically and **will not switch back** to use original SIM card except current SIM connection is also broken. That is, SIM-A and SIM-B are used iteratively, but either one will keep being used for data transfer when current connection is still alive.

## SIM-A / SIM-B first with Failback enable

With Failback option enabled, “SIM-A First” scenario is used to connect when the connection is broken, gateway system will switch to use SIM-B. And when SIM-A connection is recovered, it will switch back to use original SIM-A card

# M2M Cellular Gateway

## Configure 3G/4G WAN Setting

When **Edit** button is applied, **Internet Connection Configuration**, and **3G/4G WAN Configuration** screens will appear.

Internet Connection Configuration ( WAN - 1 )	
Item	Setting
▶ WAN Type	3G/4G ▼

3G/4G WAN Type Configuration	
Item	Setting
▶ Preferred SIM Card	SIM-A First ▼ Failback : <input type="checkbox"/> Enable
▶ Auto Flight Mode	<input type="checkbox"/> Enable

3G/4G Connection Configuration		
Item	Value setting	Description
<b>WAN Type</b>	1. A Must filled setting 2. <b>3G/4G</b> is set by default.	From the dropdown box, select Internet connection method for 3G/4G WAN Connection. Only <b>3G/4G</b> is available.
<b>Preferred SIM Card</b>	1. A Must filled setting 2. By default <b>SIM-A First</b> is selected 3. <b>Failback</b> is unchecked by default	<p>Choose which SIM card you want to use for the connection.</p> <p>When <b>SIM-A First</b> or <b>SIM-B First</b> is selected, it means the connection is built first by using SIM A/SIM B. And if the connection is failed, it will change to the other SIM card and try to dial again, until the connection is up.</p> <p>When <b>SIM-A only</b> or <b>SIM-B only</b> is selected, it will try to dial up only using the SIM card you selected.</p> <p>When <b>Failback</b> is checked, it means if the connection is dialed-up not using the main SIM you selected, it will failback to the main SIM and try to establish the connection periodically.</p> <p><b>Note_1:</b> For the product with single SIM design, only <b>SIM-A Only</b> option is available.</p> <p><b>Note_2:</b> <b>Failback</b> is available only when <b>SIM-A First</b> or <b>SIM-B First</b> is selected.</p>
<b>Auto Flight Mode</b>	The box is unchecked by default	<p>Check the <b>Enable</b> box to activate the function.</p> <p>By default, if you disabled the <b>Auto Flight Mode</b>, the cellular module will always occupy a physical channel with cellular tower. It can get data connection instantly, and receive managing SMS all the time on required.</p> <p>If you enabled the <b>Auto Flight Mode</b>, the gateway will pop up a message <i>"Flight mode will cause cellular function to be malfunctioned when the data session is offline."</i>, and it will make the cellular module into flight mode and disconnected with cellular tower physically. In, addition, whenever the cellular module is going to be used for data connection to backup the failed primary connection, the cellular module will be active to connect with cellular tower and get the data connection for use, It takes few more seconds.</p> <p><b>Note:</b> Keep it unchecked unless your cellular ISP asked the connected gateway to enable the Auto Flight Mode.</p>

# M2M Cellular Gateway

## Configure SIM-A / SIM-B Card

Here you can set configurations for the cellular connection according to your situation or requirement.

Connection with SIM-A Card	
Item	Setting
▶ Network Type	Auto ▼
▶ Dial-Up Profile	Manual-configuration ▼
▶ APN	<input type="text"/>
▶ IP Type	IPv4 ▼
▶ PIN Code	<input type="text"/> (Optional)
▶ Dial Number	<input type="text"/> (Optional)
▶ Account	<input type="text"/> (Optional)
▶ Password	<input type="text"/> (Optional)
▶ Authentication	Auto ▼
▶ IP Mode	Dynamic IP ▼
▶ Primary DNS	<input type="text"/> (Optional)
▶ Secondary DNS	<input type="text"/> (Optional)
▶ Roaming	<input type="checkbox"/> Enable

Note\_1: Configurations of SIM-B Card follows the same rule of Configurations of SIM-A Card, here we list SIM-A as the example.

Note\_2: Both **Connection with SIM-A Card** and **Connection with SIM-B Card** will pop up only when the **SIM-A First** or **SIM-B First** is selected, otherwise it only pops out one of them.

Connection with SIM-A/-B Card		
Item	Value setting	Description
<b>Network Type</b>	1. A Must filled setting 2. By default <b>Auto</b> is selected	Select <b>Auto</b> to register a network automatically, regardless of the network type. Select <b>2G Only</b> to register the 2G network only. Select <b>2G Prefer</b> to register the 2G network first if it is available. Select <b>3G only</b> to register the 3G network only. Select <b>3G Prefer</b> to register the 3G network first if it is available. Select <b>LTE only</b> to register the LTE network only.  <b>Note:</b> Options may be different due to the specification of the module.
<b>Dial-Up Profile</b>	1. A Must filled setting 2. By default <b>Manual-configuration</b> is selected	Specify the type of dial-up profile for your 3G/4G network. It can be <b>Manual-configuration</b> , <b>APN Profile List</b> , or <b>Auto-detection</b> .

# M2M Cellular Gateway

		<p>Select <b>Manual-configuration</b> to set <b>APN</b> (Access Point Name), <b>Dial Number</b>, <b>Account</b>, and <b>Password</b> to what your carrier provides.</p> <p>Select <b>APN Profile List</b> to set more than one profile to dial up in turn, until the connection is established. It will pop up a new filed, please go to <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup &gt; SIM-A APN Profile List</b> for details.</p> <p>Select <b>Auto-detection</b> to automatically bring out all configurations needed while dialing-up, by comparing the IMSI of the SIM card to the record listed in the manufacturer's database.</p> <p><b>Note_1:</b> You are highly recommended to select the <b>Manual</b> or <b>APN Profile List</b> to specify the network for your subscription. Your ISP always provides such network settings for the subscribers.</p> <p><b>Note_2:</b> If you select <b>Auto-detection</b>, it is likely to connect to improper network, or failed to find a valid APN for your ISP.</p>
<b>APN</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. String format : any text</li> </ol>	<p>Enter the <b>APN</b> you want to use to establish the connection.</p> <p>This is a must-filled setting if you selected <b>Manual-configuration</b> as dial-up profile scheme.</p>
<b>IP Type</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>IPv4</b> is selected</li> </ol>	<p>Specify the IP type of the network service provided by your 3G/4G network. It can be <b>IPv4</b>, <b>IPv6</b>, or <b>IPv4/6</b>.</p>
<b>PIN code</b>	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. String format : interger</li> </ol>	<p>Enter the PIN (Personal Identification Number) code if it needs to unlock your SIM card.</p>
<b>Dial Number, Account, Password</b>	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. String format : any text</li> </ol>	<p>Enter the optional <b>Dial Number</b>, <b>Account</b>, and <b>Password</b> settings if your ISP provided such settings to you.</p> <p>Note: These settings are only displayed when Manual-configuration is selected.</p>
<b>Authentication</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>Auto</b> is selected</li> </ol>	<p>Select <b>PAP</b> (Password Authentication Protocol) and use such protocol to be authenticated with the carrier's server.</p> <p>Select <b>CHAP</b> (Challenge Handshake Authentication Protocol) and use such protocol to be authenticated with the carrier's server.</p> <p>When <b>Auto</b> is selected, it means it will authenticate with the server either <b>PAP</b> or <b>CHAP</b>.</p>
<b>IP Mode</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>Dynamic IP</b> is selected</li> </ol>	<p>When <b>Dynamic IP</b> is selected, it means it will get all IP configurations from the carrier's server and set to the device directly.</p> <p>If you have specific application provided by the carrier, and want to set IP configurations on your own, you can switch to <b>Static IP</b> mode and fill in all parameters that required, such as IP address, subnet mask and gateway.</p> <p><b>Note:</b> <b>IP Subnet Mask</b> is a must filled setting, and make sure you have the right configuration. Otherwise, the connection may get issues.</p>
<b>Primary DNS</b>	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. String format : IP address (IPv4 type)</li> </ol>	<p>Enter the IP address to change the primary DNS (Domain Name Server) setting. If it is not filled-in, the server address is given by the carrier while dialing-up.</p>
<b>Secondary DNS</b>	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. String format : IP address (IPv4 type)</li> </ol>	<p>Enter the IP address to change the secondary DNS (Domain Name Server) setting. If it is not filled-in, the server address is given by the carrier while dialing-up.</p>
<b>Roaming</b>	<p>The box is unchecked by default</p>	<p>Check the box to establish the connection even the registration status is roaming, not in home network.</p> <p><b>Note:</b> It may cost additional charges if the connection is under roaming.</p>

## Create/Edit SIM-A / SIM-B APN Profile List

You can add a new APN profile for the connection, or modify the content of the APN profile you added. It is available only when you select **Dial-Up Profile** as **APN Profile List**.

SIM-A APN Profile List <input type="button" value="Add"/> <input type="button" value="Delete"/>									
ID	Profile Name	APN	IP Type	Account	Password	Authentication	Priority	Enable	Actions

List all the APN profile you created, easily for you to check and modify. It is available only when you select **Dial-Up Profile** as **APN Profile List**.

When **Add** button is applied, an **APN Profile Configuration** screen will appear.

SIM-A APN Profile Configuration	
Item	Setting
▶ Profile Name	<input type="text" value="Profile-1"/>
▶ APN	<input type="text"/>
▶ IP Type	IPv4 ▼
▶ Account	<input type="text"/> (Optional)
▶ Password	<input type="text"/> (Optional)
▶ Authentication	Auto ▼
▶ Priority	<input type="text"/>
▶ Profile	<input checked="" type="checkbox"/> Enable

SIM-A/-B APN Profile Configuration		
Item	Value setting	Description
<b>Profile Name</b>	1. By default <b>Profile-x</b> is listed 2. String format : any text	Enter the profile name you want to describe for this profile.
<b>APN</b>	String format : any text	Enter the <b>APN</b> you want to use to establish the connection.
<b>IP Type</b>	1. A Must filled setting 2. By default <b>IPv4</b> is selected	Specify the IP type of the network service provided by your 3G/4G network. It can be <b>IPv4</b> , <b>IPv6</b> , or <b>IPv4/6</b> .
<b>Account</b>	String format : any text	Enter the <b>Account</b> you want to use for the authentication. <b>Value Range: 0 ~ 53 characters.</b>
<b>Password</b>	String format : any text	Enter the <b>Password</b> you want to use for the authentication.
<b>Authentication</b>	1. A Must filled setting 2. By default <b>Auto</b> is selected	Select the Authentication method for the 3G/4G connection. It can be <b>Auto</b> , <b>PAP</b> , <b>CHAP</b> , or <b>None</b> .
<b>Priority</b>	1. A Must filled setting 2. String format : integer	Enter the value for the dialing-up order. The valid value is from 1 to 16. It will start to dial up with the profile that assigned with the smallest number.

# M2M Cellular Gateway

		<b>Value Range: 1 ~ 16.</b>
<b>Profile</b>	The box is checked by default	Check the box to enable this profile. Uncheck the box to disable this profile in dialing-up action.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.
<b>Back</b>	N/A	When the <b>Back</b> button is clicked, the screen will return to the previous page.

## Setup 3G/4G Connection Common Configuration

Here you can change common configurations for 3G/4G WAN.

3G/4G Connection Common Configuration	
Item	Setting
▶ Connection Control	Auto-reconnect ▼
▶ Time Schedule	(0) Always ▼
▶ MTU Setup	<input type="checkbox"/> Enable
▶ IP Passthrough (Cellular Bridge)	<input type="checkbox"/> Enable Fixed MAC : <input type="text"/>
▶ NAT	<input checked="" type="checkbox"/> Enable
▶ IGMP	Disable ▼
▶ WAN IP Alias	<input type="checkbox"/> Enable <input type="text" value="10.0.0.1"/>

3G/4G Connection Common Configuration		
Item	Value setting	Description
<b>Connection Control</b>	By default <b>Auto-reconnect</b> is selected	<p>When <b>Auto-reconnect</b> is selected, it means it will try to keep the Internet connection on all the time whenever the physical link is connected.</p> <p>When <b>Connect-on-demand</b> is selected, it means the Internet connection will be established only when detecting data traffic.</p> <p>When <b>Connect Manually</b> is selected, it means you need to click the <b>Connect</b> button to dial up the connection manually. Please go to <b>Status &gt; Basic Network &gt; WAN &amp; Uplink</b> tab for details.</p> <p><b>Note:</b> If the WAN interface serves as the primary one for another WAN interface in Failover role( and vice versa), the Connection Control parameter will not be available on both WANs as the system must set it to "Auto-reconnect"</p>
<b>Maximum Idle Time</b>	<ol style="list-style-type: none"> <li>An Optional setting</li> <li>By default <b>600</b> seconds is filled-in</li> </ol>	<p>Specify the maximum Idle time setting to disconnect the internet connection when the connection idle timed out.</p> <p><b>Value Range: 300 ~ 86400.</b></p> <p><b>Note:</b> This field is available only when <b>Connect-on-demand</b> or <b>Connect Manually</b> is selected as the connection control scheme.</p>

# M2M Cellular Gateway

<b>Time Schedule</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>(0) Always</b> is selected</li> </ol>	When <b>(0) Always</b> is selected, it means this WAN is under operation all the time. Once you have set other schedule rules, there will be other options to select. Please go to <b>Object Definition &gt; Scheduling</b> for details.
<b>MTU Setup</b>	<ol style="list-style-type: none"> <li>1. An Optional setting</li> <li>2. <b>Uncheck</b> by default</li> </ol>	<p>Check the Enable box to enable the MTU (Maximum Transmission Unit) limit, and specify the <b>MTU</b> for the 3G/4G connection.</p> <p><b>MTU</b> refers to Maximum Transmission Unit. It specifies the largest packet size permitted for Internet transmission.</p> <p><b>Value Range: 1200 ~ 1500.</b></p>
<b>IP Pass-through (Cellular Bridge)</b>	<ol style="list-style-type: none"> <li>1. The box is unchecked by default</li> <li>2. String format for <b>Fixed MAC</b>: MAC address, e.g. 00:50:18:aa:bb:cc</li> </ol>	<p>When <b>Enable</b> box is checked, it means the device will directly assign the WAN IP to the first connected local LAN client.</p> <p>However, when an optional <b>Fixed MAC</b> is filled-in a non-zero value, it means only the client with this MAC address can get the WAN IP address.</p> <p><b>Note:</b> When the <b>IP Pass-through</b> is on, <b>NAT</b> and <b>WAN IP Alias</b> will be unavailable until the function is disabled again.</p>
<b>NAT</b>	<b>Check</b> by default	Uncheck the box to disable <b>NAT</b> (Network Address Translation) function.
<b>IGMP</b>	By default <b>Disable</b> is selected	<p>Select <b>Auto</b> to enable <b>IGMP</b> function.</p> <p>Check the <b>Enable</b> box to enable <b>IGMP Proxy</b>.</p>
<b>WAN IP Alias</b>	<ol style="list-style-type: none"> <li>1. Unchecked by default</li> <li>2. String format: IP address (IPv4 type)</li> </ol>	Check the box to enable <b>WAN IP Alias</b> , and fill in the IP address you want to assign.

Network Monitoring Configuration

		ICMP checking packets.
<b>Loading Check</b>	<ol style="list-style-type: none"> <li>1. An optional setting</li> <li>2. Box is checked by default</li> </ol>	<p>Check the <b>Enable</b> box to activate the loading check function. Enable Loading Check allows the gateway to ignore unreturned DNS queries or ICMP requests when WAN bandwidth is fully occupied. This is to prevent false link-down status.</p> <p><b>Latency Threshold</b> defines the tolerance threshold of responding time. <b>Fail Threshold</b> specifies the detected disconnection before the router recognize the WAN link down status. Enter a number of detecting disconnection times to be the threshold before disconnection is acknowledged.</p>
<b>Target 1</b>	<ol style="list-style-type: none"> <li>1. An Optional filled setting</li> <li>2. <b>DNS1</b> is selected by default</li> </ol>	<p><b>Target1</b> specifies the first target of sending DNS query/ICMP request.  <b>DNS1:</b> set the primary DNS to be the target.  <b>DNS2:</b> set the secondary DNS to be the target.  <b>Gateway:</b> set the Current gateway to be the target.  <b>Other Host:</b> enter an IP address to be the target.</p>
<b>Target 2</b>	<ol style="list-style-type: none"> <li>1. An Optional filled setting</li> <li>2. <b>None</b> is selected by default</li> </ol>	<p><b>Target1</b> specifies the second target of sending DNS query/ICMP request.  <b>None:</b> no second target is required.  <b>DNS1:</b> set the primary DNS to be the target.  <b>DNS2:</b> set the secondary DNS to be the target.  <b>Gateway:</b> set the Current gateway to be the target.  <b>Other Host:</b> enter an IP address to be the target.</p>
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings.

# M2M Cellular Gateway

## 2.2 LAN & VLAN

This section provides the configuration of LAN and VLAN. VLAN is an optional feature, and it depends on the product specification of the purchased gateway.

### 2.2.1 Ethernet LAN

The Local Area Network (LAN) can be used to share data or files among computers attached to a network. Following diagram illustrates the network that wired and interconnects computers.

Please follow the following instructions to do IPv4 Ethernet LAN Setup.

Configuration	
Item	Setting
▶ IP Mode	Static IP
▶ LAN IP Address	<input type="text" value="192.168.123.254"/>
▶ Subnet Mask	<input type="text" value="255.255.255.0 (/24)"/>

Configuration		
Item	Value setting	Description
<b>IP Mode</b>	N/A	It shows the LAN IP mode for the gateway according the related configuration. <b>Static IP:</b> If there is at least one WAN interface activated, the LAN IP mode is fixed in Static IP mode. <b>Dynamic IP:</b> If all the available WAN interfaces are disabled, the LAN IP mode can be Dynamic IP mode.
<b>LAN IP Address</b>	1. A Must filled setting 2. 192.168.123.254 is set by default	Enter the local IP address of this device. The network device(s) on your network must use the LAN IP address of this device as their Default Gateway. You can change it if necessary. <b>Note:</b> It's also the IP address of web UI. If you change it, you need to type new IP address in the browser to see web UI.
<b>Subnet Mask</b>	1. A Must filled setting 2. 255.255.255.0 (/24) is set	Select the subnet mask for this gateway from the dropdown list. Subnet mask defines how many clients are allowed in one network or subnet.

# M2M Cellular Gateway

	by default	The default subnet mask is 255.255.255.0 (/24), and it means maximum 254 IP addresses are allowed in this subnet. However, one of them is occupied by LAN IP address of this gateway, so there are maximum 253 clients allowed in LAN network. <b>Value Range:</b> 255.0.0.0 (/8) ~ 255.255.255.252 (/30).
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration
<b>Undo</b>	N/A	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

## Create / Edit Additional IP

This gateway provides the LAN IP alias function for some special management consideration. You can add additional LAN IP for this gateway, and access to this gateway with the additional IP.

Additional IP <input type="button" value="Add"/> <input type="button" value="Delete"/>						
ID	Name	Interface	IP Address	Subnet Mask	Enable	Action

When **Add** button is applied, **Additional IP Configuration** screen will appear.

Additional IP Configuration	
Item	Setting
▶ Name	<input type="text"/>
▶ Interface	lo ▼
▶ IP Address	<input type="text"/>
▶ Subnet Mask	255.255.255.0 (/24) ▼
▶ Enable	<input type="checkbox"/>
<input type="button" value="Save"/>	

Configuration		
Item	Value setting	Description
<b>Name</b>	.1 An Optional Setting	Enter the name for the alias IP address.
<b>Interface</b>	1. A Must filled setting 2. lo is set by default	Specify the Interface type. It can be lo or br0.
<b>IP Address</b>	1. An Optional setting 2. 192.168.123.254 is set by default	Enter the addition IP address for this device.
<b>Subnet Mask</b>	1. A Must filled setting 2. 255.255.255.0 (/24) is set by default	Select the subnet mask for this gateway from the dropdown list. Subnet mask defines how many clients are allowed in one network or subnet. The default subnet mask is 255.255.255.0 (/24), and it means maximum 254 IP addresses are allowed in this subnet. However, one of them is occupied by LAN IP address of this gateway, so there are maximum 253 clients allowed in LAN

		network. <b><i>Value Range:</i></b> 255.0.0.0 (/8) ~ 255.255.255.255 (/32).
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration

# M2M Cellular Gateway

## 2.2.2 VLAN

VLAN (Virtual LAN) is a logical network under a certain switch or router device to group client hosts with a specific VLAN ID. This gateway supports both Port-based VLAN and Tag-based VLAN. These functions allow you to divide local network into different “virtual LANs”. It is common requirement for some application scenario. For example, there are various departments within SMB. All client hosts in the same department should own common access privilege and QoS property. You can assign departments either by port-based VLAN or tag-based VLAN as a group, and then configure it by your plan. In some cases, ISP may need router to support “VLAN tag” for certain kinds of services (e.g. IPTV). You can group all devices required this service as one tag-based VLAN.

If the gateway has only one physical Ethernet LAN port, only very limited configuration is available if you enable the Port-based VLAN.

### ➤ Port-based VLAN

Port-based VLAN function can group Ethernet ports, Port-1 ~ Port-4, and WiFi Virtual Access Points, VAP-1 ~ VAP-8, together for differentiated services like Internet surfing, multimedia enjoyment, VoIP talking, and so on. Two operation modes, NAT and Bridge, can be applied to each VLAN group. One DHCP server can be allocated for a NAT VLAN group to let group host member get its IP address. Thus, each host can surf Internet via the NAT mechanism of business access gateway. In bridge mode, Intranet packet flow is delivered out WAN trunk port with VLAN tag to upper link for different services.

A port-based VLAN is a group of ports on an Ethernet or Virtual APs of Wired or Wireless Gateway that form a logical LAN segment. Following is an example.

For example, in a company, administrator schemes out 3 network segments, Lobby/Meeting Room, Office, and Data Center. In a Wireless Gateway, administrator can configure Lobby/Meeting Room segment with VLAN ID 3. The VLAN group includes Port-3 and VAP-8 (SSID: Guest) with NAT mode and DHCP-3 server equipped. He also configure Office segment with VLAN ID 2. The VLAN group includes Port-2 and VAP-1 (SSID:

# M2M Cellular Gateway

Staff) with NAT mode and DHCP-2 server equipped. At last, administrator also configure Data Center segment with VLAN ID 1. The VLAN group includes Port-1 with NAT mode to WAN interface as shown in following diagram.

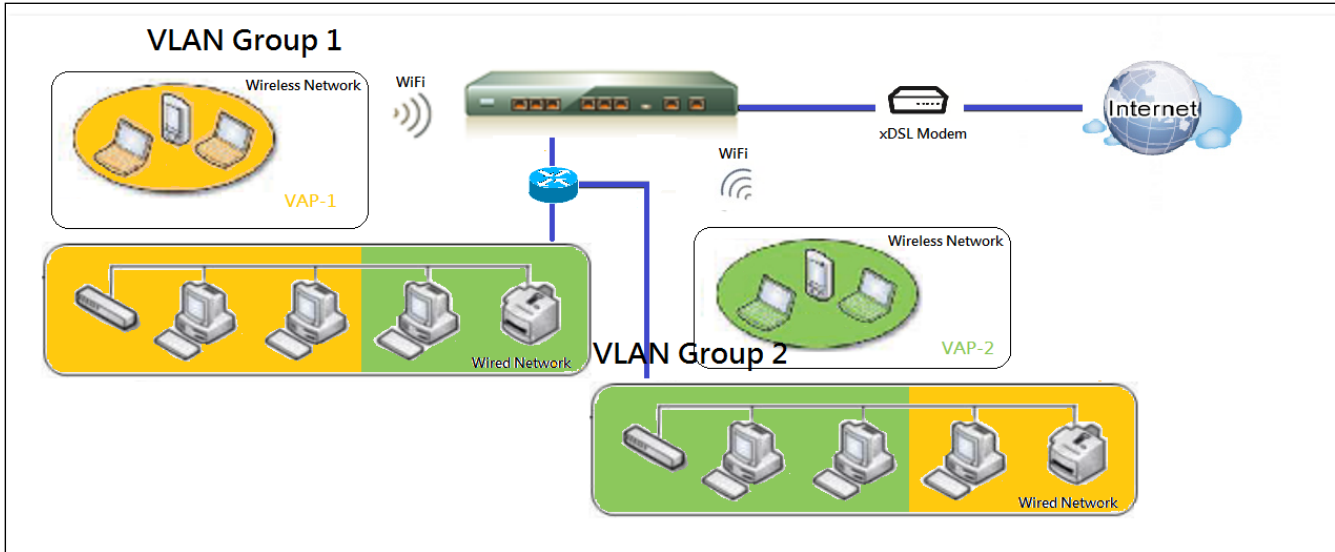

Above is the general case for 3 Ethernet LAN ports in the gateway. But if the device just has one Ethernet LAN port, there will be only one VLAN group for the device. Under such situation, it still supports both the NAT and Bridge mode for the Port-based VLAN configuration.

## ➤ Tag-based VLAN

Tag-based VLAN function can group Ethernet ports, Port-1 ~ Port-4, and WiFi Virtual Access Points, VAP-1 ~ VAP-8, together with different VLAN tags for deploying subnets in Intranet. All packet flows can carry with different VLAN tags even at the same physical Ethernet port for Intranet. These flows can be directed to different destination because they have differentiated tags. The approach is very useful to group some hosts at different geographic location to be in the same workgroup.

Tag-based VLAN is also called a VLAN Trunk. The VLAN Trunk collects all packet flows with different VLAN IDs from Router device and delivers them in the Intranet. VLAN membership in a tagged VLAN is determined by VLAN ID information within the packet frames that are received on a port. Administrator can further use a VLAN switch to separate the VLAN trunk to different groups based on VLAN ID. Following is an example.

# M2M Cellular Gateway

For example, in a company, administrator schemes out 3 network segments, Lab, Meeting Rooms, and Office. In a Security VPN Gateway, administrator can configure Office segment with VLAN ID 12. The VLAN group is equipped with DHCP-3 server to construct a 192.168.12.x subnet. He also configure Meeting Rooms segment with VLAN ID 11. The VLAN group is equipped with DHCP-2 server to construct a 192.168.11.x subnet for Intranet only. That is, any client host in VLAN 11 group can't access the Internet. At last, he configures Lab segment with VLAN ID 10. The VLAN group is equipped with DHCP-1 server to construct a 192.168.10.x subnet.

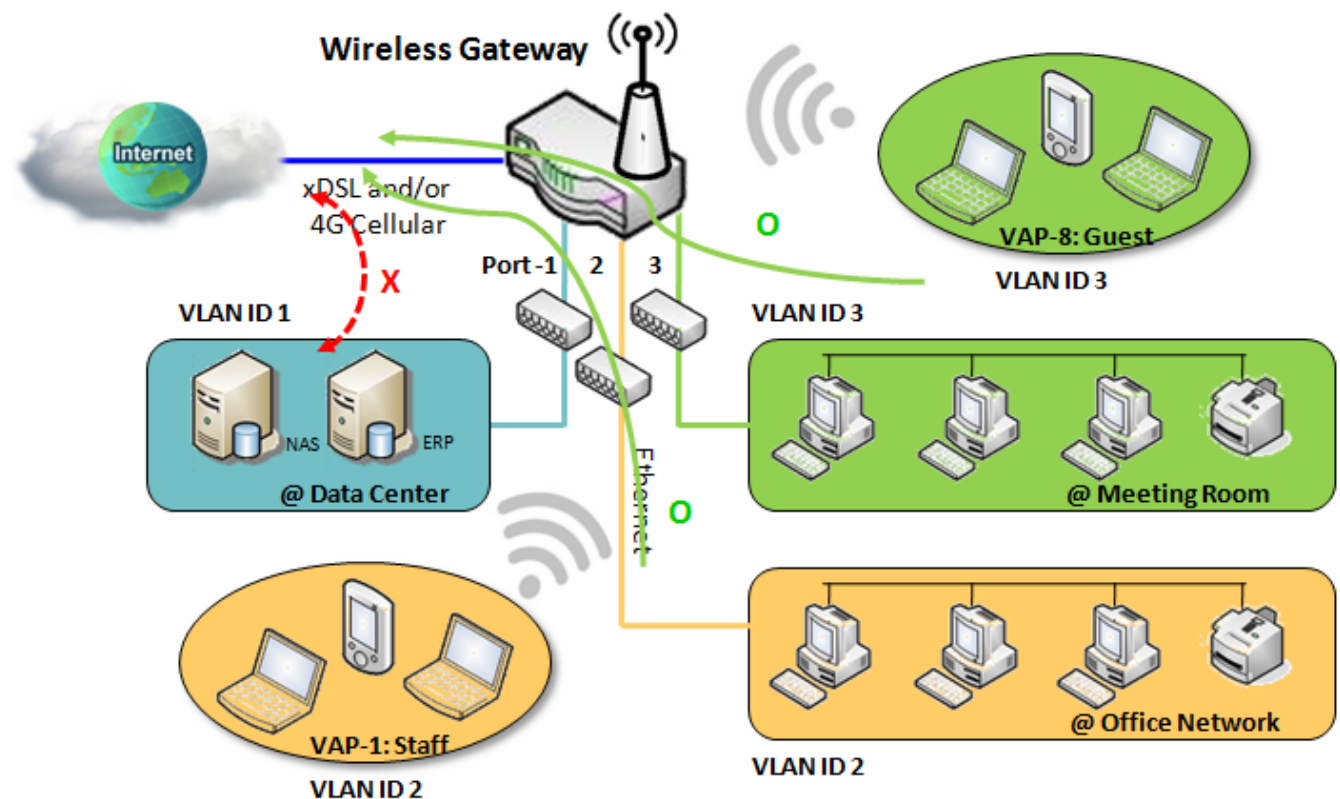

# M2M Cellular Gateway

## ➤ VLAN Groups Access Control

Administrator can specify the Internet access permission for all VLAN groups. He can also configure which VLAN groups are allowed to communicate with each other.

## VLAN Group Internet Access

Administrator can specify members of one VLAN group to be able to access Internet or not. Following is an example that VLAN groups of VID is 2 and 3 can access Internet but the one with VID is 1 cannot access Internet. That is, visitors in meeting room and staffs in office network can access Internet. But the computers/servers in data center cannot access Internet since security consideration. Servers in data center only for trusted staffs or are accessed in secure tunnels.

# M2M Cellular Gateway

## Inter VLAN Group Routing:

In Port-based tagging, administrator can specify member hosts of one VLAN group to be able to communicate with the ones of another VLAN group or not. This is a communication pair, and one VLAN group can join many communication pairs. But communication pair doesn't have the transitive property. That is, A can communicate with B, and B can communicate with C, it doesn't imply that A can communicate with C. An example is shown at following diagram. VLAN groups of VID is 1 and 2 can access each other but the ones between VID 1 and VID 3 and between VID 2 and VID 3 can't.

# M2M Cellular Gateway

## VLAN Setting

Go to **Basic Network > LAN & VLAN > VLAN** Tab.

The VLAN function allows you to divide local network into different virtual LANs. There are Port-based and Tag-based VLAN types. Select one that applies.

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ VLAN Types	Port-based ▼

Configuration		
Item	Value setting	Description
<b>VLAN Type</b>	<b>Port-based</b> is selected by default	Select the VLAN type that you want to adopt for organizing you local subnets. <b>Port-based:</b> Port-based VLAN allows you to add rule for each LAN port, and you can do advanced control with its VLAN ID. <b>Tag-based:</b> Tag-based VLAN allows you to add VLAN ID, and select member and DHCP Server for this VLAN ID. Go to <b>Tag-based VLAN List</b> table.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration

### Port-based VLAN – Create/Edit VLAN Rules

The port-based VLAN allows you to custom each LAN port. There is a default rule shows the configuration of all LAN ports. Also, if your device has a DMZ port, you will see DMZ configuration, too. The maxima rule numbers is based on LAN port numbers.

Port-based VLAN List <span style="float: right;">Add Delete</span>										
Name	VLAN ID	VLAN Tagging	NAT / Bridge	Port Members	LAN IP Address	Subnet Mask	Joined WAN	WAN VID	Enable	Actions
DMZ	4094	X	NAT	DMZ Port	192.168.6.254	255.255.255.0	WAN - 1	0	<input checked="" type="checkbox"/>	Edit
LAN	Native VLAN	X	NAT	<span style="border: 1px solid gray; padding: 2px;">Detail</span>	192.168.123.254	255.255.255.0	All WANs	0	<input checked="" type="checkbox"/>	Edit

Apply Inter VLAN Group Routing

When **Add** button is applied, Port-based VLAN Configuration screen will appear, which is including 3 sections: **Port-based VLAN Configuration**, **IP Fixed Mapping Rule List**, and **Inter VLAN Group Routing** (enter through a button)

## Port-based VLAN – Inter VLAN Group Routing

Click **VLAN Group Routing** button, the **VLAN Group Internet Access Definition** and **Inter VLAN Group Routing** screen will appear.

VLAN Group Internet Access Definition		
VLAN IDs	Members	Internet Access(WAN)
1	Port : 2,3,4 ; VAP : 1,2,3,4,5,6,7,8	Allow <input type="button" value="Edit"/>

Inter VLAN Group Routing		
VLAN IDs	Members	Action
		<input type="button" value="Edit"/>
		<input type="button" value="Edit"/>
		<input type="button" value="Edit"/>
		<input type="button" value="Edit"/>

When **Edit** button is applied, a screen similar to this will appear.

VLAN Group Internet Access Definition		
VLAN IDs	Members	Internet Access(WAN)
<input checked="" type="checkbox"/> 1, <input checked="" type="checkbox"/> 2	Port : 2,3,4 ; VAP : 1,2,3,4,5,6,7,8	Allow <input type="button" value="Edit"/>

Inter VLAN Group Routing		
VLAN IDs	Members	Action
<input type="checkbox"/> 1, <input type="checkbox"/> 2		<input type="button" value="Edit"/>

Inter VLAN Group Routing		
Item	Value setting	Description
<b>VALN Group Internet Access Definition</b>	All boxes are checked by default.	By default, all boxes are checked means all <b>VLAN ID</b> members are allow to access WAN interface. If uncheck a certain <b>VLAN ID</b> box, it means the VLAN ID member can't access Internet anymore. Note: <b>VLAN ID 1</b> is available always; it is the default VLAN ID of <b>LAN</b> rule. The other <b>VLAN IDs</b> are available only when they are enabled.
<b>Inter VLAN Group Routing</b>	The box is unchecked by default.	Click the expected VLAN IDs box to enable the Inter VLAN access function. By default, members in different VLAN IDs can't access each other. The gateway supports up to 4 rules for <b>Inter VLAN Group Routing</b> . For example, if ID_1 and ID_2 are checked, it means members in VLAN ID_1 can access members of VLAN ID_2, and vice versa.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration

## Tag-based VLAN – Create/Edit VLAN Rules

The **Tag-based VLAN** allows you to customize each LAN port according to VLAN ID. There is a default rule shows the configuration of all LAN ports and all VAPs. Also, if your device has a DMZ port, you will see DMZ configuration, too. The router supports up to a maximum of 128 tag-based VLAN rule sets.

Tag-based VLAN List					
VLAN ID	Internet	Port	VAP	DHCP Server	Actions
Native VLAN	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/> 2 <input checked="" type="checkbox"/> 3 <input checked="" type="checkbox"/> 4	<input checked="" type="checkbox"/> 1 <input checked="" type="checkbox"/> 2 <input checked="" type="checkbox"/> 3 <input checked="" type="checkbox"/> 4 <input checked="" type="checkbox"/> 5 <input checked="" type="checkbox"/> 6 <input checked="" type="checkbox"/> 7 <input checked="" type="checkbox"/> 8	DHCP 1	<input type="button" value="Edit"/> <input type="button" value="Select"/>

When **Add** button is applied, **Tag-based VLAN Configuration** screen will appear.

Tag-based VLAN Configuration		
Item	Value setting	Description
<b>VALN ID</b>	A Must filled setting	Define the <b>VLAN ID</b> number, range is 6~4094.
<b>Internet Access</b>	The box is checked by default.	Click <b>Enable</b> box to allow the members in the VLAN group access to internet.
<b>Port</b>	The box is unchecked by default.	Check the LAN port box(es) to join the VLAN group.
<b>VAP</b>	The box is unchecked by default.	Check the VAP box(es) to join the VLAN group. Note: Only the wireless gateway has the VAP list.
<b>DHCP Server</b>	<b>DHCP 1</b> is selected by default.	Select a <b>DHCP Server</b> to these members of this VLAN group. To create or edit DHCP server for VLAN, refer to <b>Basic Network &gt; LAN &amp; VLAN &gt; DHCP Server</b> .
<b>Save</b>	N/A	Click <b>Save</b> button to save the configuration Note: After clicking <b>Save</b> button, always click <b>Apply</b> button to apply the settings.

# M2M Cellular Gateway

## 2.2.3 DHCP Server

### ➤ DHCP Server

The gateway supports up to 4 DHCP servers to fulfill the DHCP requests from different VLAN groups (please refer to VLAN section for getting more usage details). And there is one default setting for whose LAN IP Address is the same one of gateway LAN interface, with its default Subnet Mask setting as “255.255.255.0”, and its default IP Pool ranges is from “.100” to “.200” as shown at the DHCP Server List page on gateway’s WEB UI.

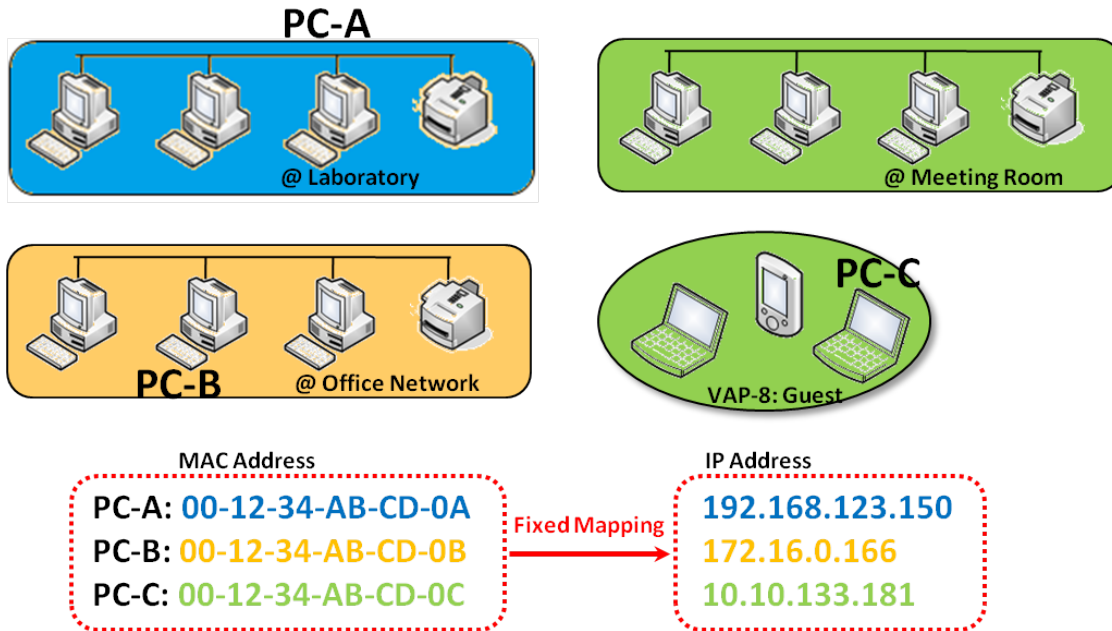

User can add more DHCP server configurations by clicking on the “Add” button behind “DHCP Server List”, or clicking on the “Edit” button at the end of each DHCP Server on list to edit its current settings. Besides, user can select a DHCP Server and delete it by clicking on the “Select” check-box and the “Delete” button.

# M2M Cellular Gateway

## ➤ Fixed Mapping

User can assign fixed IP address to map the specific client MAC address by select them then copy, when targets were already existed in the **DHCP Client List**, or to add some other Mapping Rules by manually in advance, once the target's MAC address was not ready to connect.

# M2M Cellular Gateway

## DHCP Server Setting

Go to **Basic Network > LAN & VLAN > DHCP Server** Tab.

The DHCP Server setting allows user to create and customize DHCP Server policies to assign IP Addresses to the devices on the local area network (LAN).

### Create / Edit DHCP Server Policy

The gateway allows you to custom your DHCP Server Policy. If multiple LAN ports are available, you can define one policy for each LAN (or VLAN group), and it supports up to a maximum of 4 policy sets.

DHCP Server List <input type="button" value="Add"/> <input type="button" value="Delete"/> DHCP Client List <span style="float:right">[ Help ]</span>

<b>Undo</b>	NA	When the <b>Undo</b> button is clicked the screen will return back with nothing changed.

# M2M Cellular Gateway

---

## 2.3 WiFi (not supported)

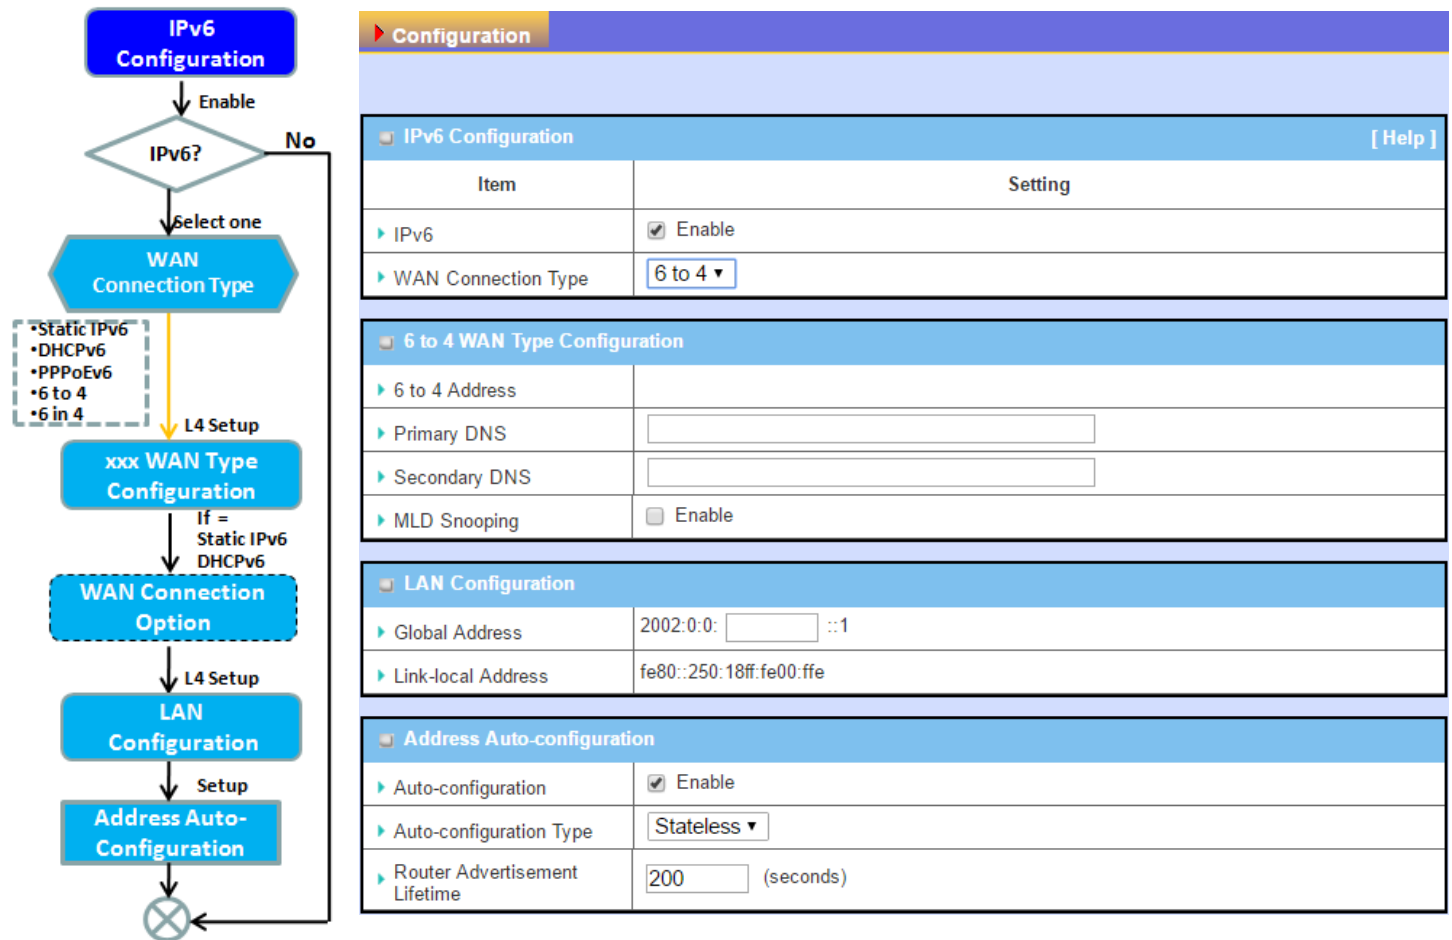

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 2.4 IPv6

The growth of the Internet has created a need for more addresses than are possible with IPv4. IPv6 (Internet Protocol version 6) is a version of the Internet Protocol (IP) intended to succeed IPv4, which is the protocol currently used to direct almost all Internet traffic. IPv6 also implements additional features not present in IPv4. It simplifies aspects of address assignment (stateless address auto-configuration), network renumbering and router announcements when changing Internet connectivity providers.

### 2.4.1 IPv6 Configuration

The **IPv6 Configuration** setting allows user to set the IPv6 connection type to access the IPv6 network. This gateway supports various types of IPv6 connection, including **Static IPv6**, **DHCPv6**, and **PPPoEv6**

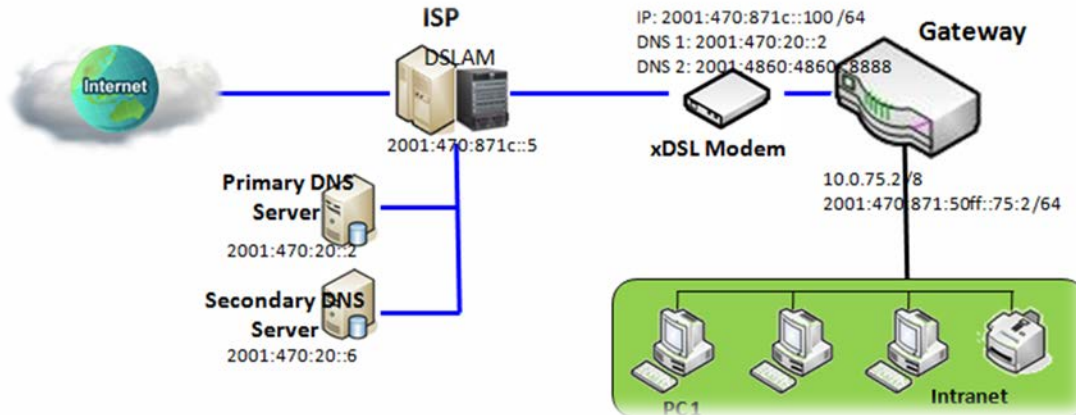

**Note:** For the products just having 3G/4G WAN interface, only **IPv6** is supported. Please contact your ISP for the IPv6 supports before you proceed with IPv6 setup.

# M2M Cellular Gateway

## IPv6 WAN Connection Type

### Static IPv6

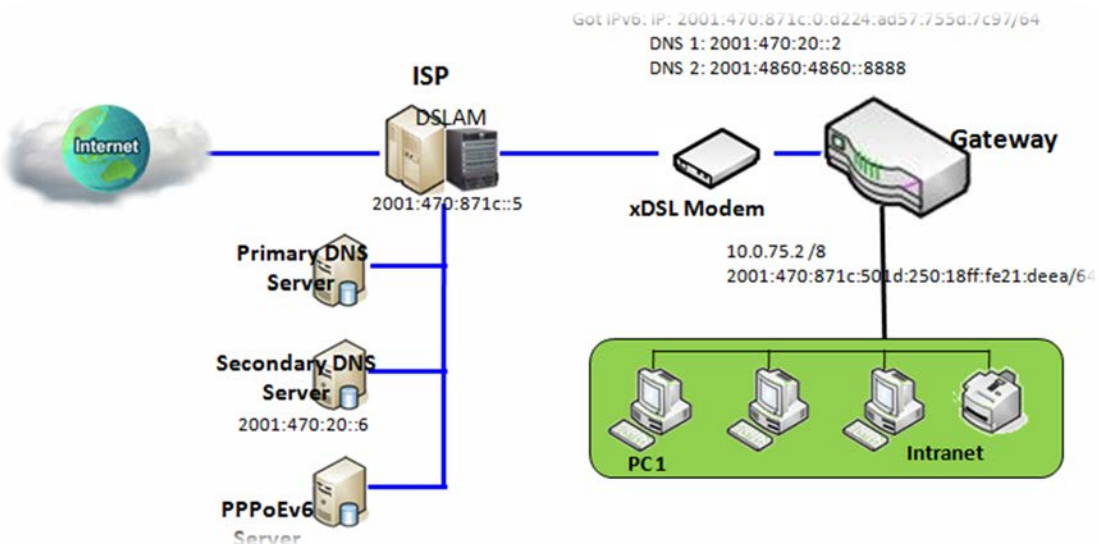

Static IPv6 does the same function as static IPv4. The static IPv6 provides manual setting of IPv6 address, IPv6 default gateway address, and IPv6 DNS.

Above diagram depicts the IPv6 IP addressing, type in the information provided by your ISP to setup the IPv6 network.

### DHCPv6

DHCP in IPv6 does the same function as DHCP in IPv4. The DHCP server sends IP address, DNS server addresses and other possible data to the DHCP client to configure automatically. The server also sends a lease time of the address and time to re-contact the server for IPv6 address renewal. The client has then to resend a request to renew the IPv6 address.

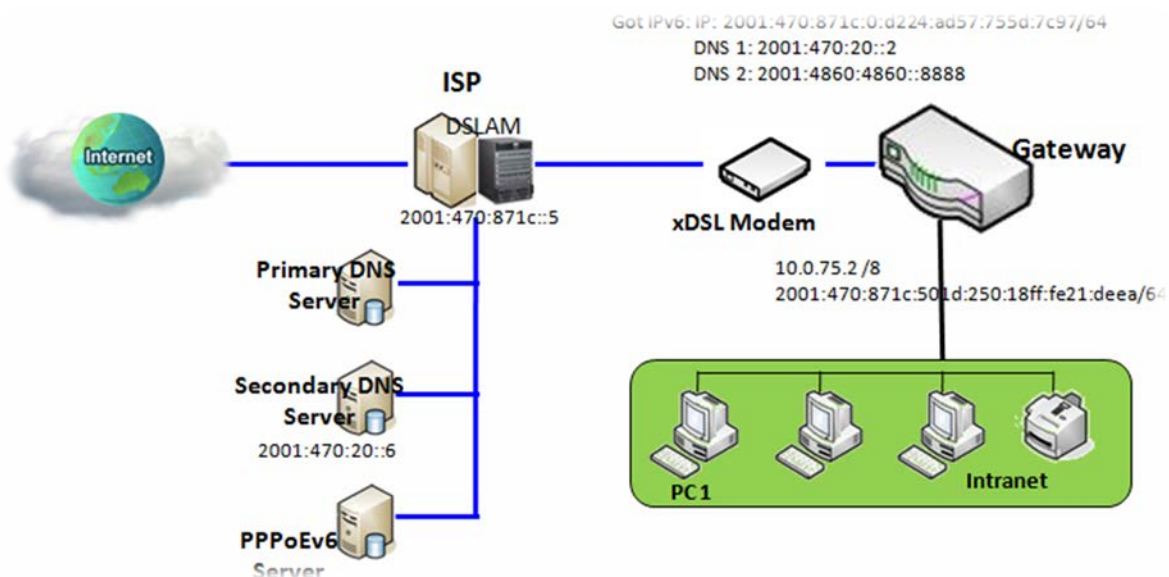

# M2M Cellular Gateway

Above diagram depicts DHCP IPv6 IP addressing, the DHCPv6 server on the ISP side assigns IPv6 address, IPv6 default gateway address, and IPv6 DNS to client host's automatically.

## PPPoEv6

PPPoEv6 in IPv6 does the same function as PPPoE in IPv4. The PPPoEv6 server provides configuration parameters based on PPPoEv6 client request. When PPPoEv6 server gets client request and successfully authenticates it, the server sends IP address, DNS server addresses and other required parameters to automatically configure the client.

The diagram above depicts the IPv6 addressing through PPPoE, PPPoEv6 server (DSLAM) on the ISP side provides IPv6 configuration upon receiving PPPoEv6 client request. When PPPoEv6 server gets client request and successfully authenticates it, the server sends IP address, DNS server addresses and other required parameters to automatically configure the client.

# M2M Cellular Gateway

## IPv6 Configuration Setting

Go to **Basic Network > IPv6 > Configuration** Tab.

The **IPv6 Configuration** setting allows user to set the IPv6 connection type to access the IPv6 network.

IPv6 Configuration <span style="float: right;">[ Help ]</span>

**IPv6 Address Lifetime** (A Must filled setting): Enter the DHCPv6 lifetime for your local computers. 36000 is set by default.  
*Value Range:* 0 ~ 65535.

# M2M Cellular Gateway

## 2.5 Port Forwarding

Network address translation (NAT) is a methodology of remapping one IP address space into another by modifying network address information in Internet Protocol (IP) datagram packet headers while they are in transit across a traffic routing device. The technique was originally used for ease of rerouting traffic in IP networks without renumbering every host. It has become a popular and essential tool in conserving global address space allocations in face of IPv4 address exhaustion. The product you purchased embeds and activates the NAT function. You also can disable the NAT function in **[Basic Network]-[WAN & Uplink]-[Internet Setup]-[WAN Type Configuration]** page.

Usually all local hosts or servers behind corporate gateway are protected by NAT firewall. NAT firewall will filter out unrecognized packets to protect your Intranet. So, all local hosts are invisible to the outside world. Port forwarding or port mapping is function that redirects a communication request from one address and port number combination to assigned one. This technique is most commonly used to make services on a host residing on a protected or masqueraded (internal) network available to hosts on the opposite side of the gateway (external network), by remapping the destination IP address and port number

# M2M Cellular Gateway

## 2.5.1 Configuration

### [NAT Loopback](#)

This feature allows you to access the WAN global IP address from your inside NAT local network. It is useful when you run a server inside your network. For example, if you set a mail server at LAN side, your local devices can access this mail server through gateway's global IP address when enable NAT loopback feature. On either side are you in accessing the email server, at the LAN side or at the WAN side, you don't need to change the IP address of the mail server.

### [Configuration Setting](#)

Go to Basic Network > Port Forwarding > Configuration tab.

The NAT Loopback allows user to access the WAN IP address from inside your local network.

### Enable NAT Loopback

NAT Loopback <span style="float: right;">[ Help ]</span>

## 2.5.2 Virtual Server & Virtual Computer

Configuration								
Item	Setting							
▶ Virtual Server	<input checked="" type="checkbox"/> Enable							
▶ Virtual Computer	<input checked="" type="checkbox"/> Enable							

Virtual Server List <input type="button" value="Add"/> <input type="button" value="Delete"/>								
ID	WAN Interface	Server IP	Protocol	Public Port	Private Port	Time Schedule	Enable	Actions
1	All	10.0.75.101	TCP(6) & UDP(17)	25	25	(0) Always	<input checked="" type="checkbox"/>	<input type="button" value="Edit"/> <input type="checkbox"/> Select
2	All	10.0.75.101	TCP(6) & UDP(17)	110	110	(0) Always	<input checked="" type="checkbox"/>	<input type="button" value="Edit"/> <input type="checkbox"/> Select

Virtual Computer List <input type="button" value="Add"/> <input type="button" value="Delete"/>				
ID	Global IP	Local IP	Enable	Actions
1	118.18.81.44	10.0.75.102	<input checked="" type="checkbox"/>	<input type="button" value="Edit"/> <input type="checkbox"/> Select

There are some important Port Forwarding functions implemented within the gateway, including "Virtual Server", "NAT loopback" and "Virtual Computer".

It is necessary for cooperate staffs who travel outside and want to access various servers behind office gateway. You can set up those servers by using "Virtual Server" feature. After trip, if want to access those servers from LAN side by global IP, without change original setting, NAT Loopback can achieve it.

"Virtual computer" is a host behind NAT gateway whose IP address is a global one and is visible to the outside world. Since it is behind NAT, it is protected by gateway firewall. To configure Virtual Computer, you just have to map the local IP of the virtual computer to a global IP.

# M2M Cellular Gateway

## Virtual Server & NAT Loopback

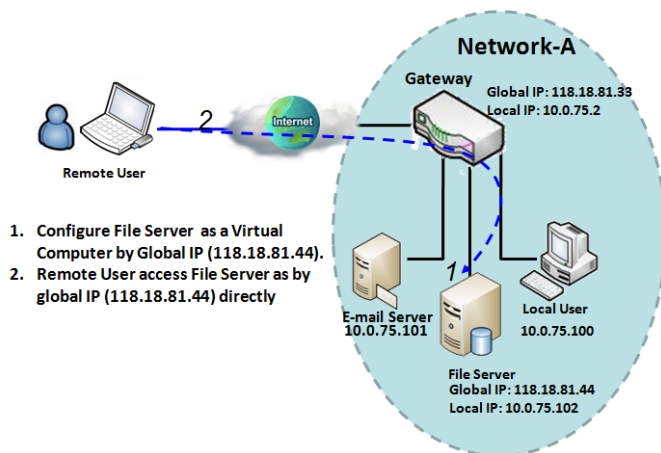

"Virtual Server" allows you to access servers with the global IP address or FQDN of the gateway as if they are servers existed in the Internet. But in fact, these servers are located in the Intranet and are physically behind the gateway. The gateway serves the service requests by port forwarding the requests to the LAN servers and transfers the replies from LAN servers to the requester on the WAN side. As shown in example, an E-mail virtual server is defined to be located at a server with IP address 10.0.75.101 in the Intranet of Network-A, including SMTP service port 25 and POP3 service port 110. So, the remote user can access the E-mail server with the

gateway's global IP 118.18.81.33 from its WAN side. But the real E-mail server is located at LAN side and the gateway is the port forwarder for E-mail service.

NAT Loopback allows you to access the WAN global IP address from your inside NAT local network. It is useful when you run a server inside your network. For example, if you set a mail server at LAN side, your local devices can access this mail server through gateway's global IP address when enable NAT loopback feature. On either side are you in accessing the email server, at the LAN side or at the WAN side, you don't need to change the IP address of the mail server.

## Virtual Computer

"Virtual Computer" allows you to assign LAN hosts to global IP addresses, so that they can be visible to outside world. While so, they are also protected by the gateway firewall as being client hosts in the Intranet. For example, if you set a FTP file server at LAN side with local IP address 10.0.75.102 and global IP address 118.18.82.44, a remote user can access the file server while it is hidden behind the NAT gateway. That is because the gateway takes care of all accessing to the IP address 118.18.82.44, including to forward the access requests to the file server and to send the replies from the server to outside world.

# M2M Cellular Gateway

## Virtual Server & Virtual Computer Setting

Go to **Basic Network > Port Forwarding > Virtual Server & Virtual Computer** tab.

### Enable Virtual Server and Virtual Computer

# M2M Cellular Gateway

## 2.5.3 DMZ & Pass Through

DMZ (De Militarized Zone) Host is a host that is exposed to the Internet cyberspace but still within the protection of firewall by gateway device. So, the function allows a computer to execute 2-way communication for Internet games, Video conferencing, Internet telephony and other special applications. In some cases when a specific application is blocked by NAT mechanism, you can indicate that LAN computer as a DMZ host to solve this problem.

The DMZ function allows you to ask the gateway pass through all normal packets to the DMZ host behind the NAT gateway only when these packets are not expected to receive by applications in the gateway or by other client hosts in the Intranet. Certainly, the DMZ host is also protected by the gateway firewall. Activate the feature and specify the DMZ host with a host in the Intranet when needed.

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
DMZ	<input checked="" type="checkbox"/> Enable <input checked="" type="checkbox"/> All <input type="checkbox"/> WAN-1 <input type="checkbox"/> WAN-2 DMZ Host : <input type="text" value="10.0.75.100"/>
Pass Through Enable	<input checked="" type="checkbox"/> IPSec <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> L2TP

### DMZ Scenario

When the network administrator wants to set up some service daemons in a host behind NAT gateway to allow remote users request for services from server actively, you just have to configure this host as DMZ Host. As shown in the diagram, there is an X server installed as DMZ host, whose IP address is 10.0.75.100. Then, remote user can request services from X server just as it is provided by the gateway whose global IP address is 118.18.81.33. The gateway will forward those packets, not belonging to any configured virtual server or applications, directly to the DMZ host.

# M2M Cellular Gateway

## VPN Pass through Scenario

Since VPN traffic is different from that of TCP or UDP connection, it will be blocked by NAT gateway. To support the pass through function for the VPN connections initiating from VPN clients behind NAT gateway, the gateway must implement some kind of VPN pass through function for such application. The gateway support the pass through function for IPSec, PPTP, and L2TP connections, you just have to check the corresponding checkbox to activate it.

## DMZ & Pass Through Setting

Go to **Basic Network > Port Forwarding > DMZ & Pass Through** tab.

The DMZ host is a host that is exposed to the Internet cyberspace but still within the protection of firewall by gateway device.

## Enable DMZ and Pass Through

Configuration [ Help ]	
Item	Setting
▶ DMZ	<input type="checkbox"/> Enable <input checked="" type="checkbox"/> All <input type="checkbox"/> WAN-1 <input type="checkbox"/> WAN-2 <input type="checkbox"/> WAN-3 <input type="checkbox"/> WAN-4 DMZ Host : <input type="text"/>
▶ Pass Through Enable	<input checked="" type="checkbox"/> IPSec <input checked="" type="checkbox"/> PPTP <input checked="" type="checkbox"/> L2TP

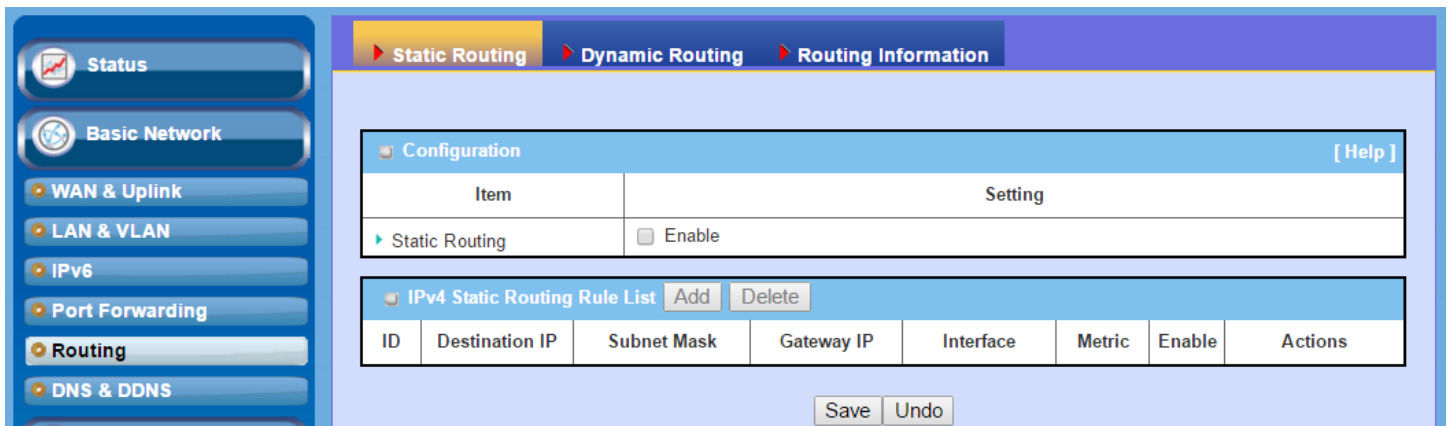

Configuration Item	Value setting	Description
DMZ	1. A Must filled setting 2. Default is <b>ALL</b> .	Check the <b>Enable</b> box to activate the DMZ function Define the selected interface to be the packet-entering interface of the gateway, and fill in the IP address of Host LAN IP in <b>DMZ Host</b> field . If the packets to be filtered are coming from <b>WAN-x</b> then select <b>WAN-x</b> for this field. Select <b>ALL</b> for packets coming into the router from any interfaces.

## M2M Cellular Gateway

---

		<p>It can be selected <b>WAN-x</b> box when <b>WAN-x</b> enabled.</p> <p><b>Note:</b> The available check boxes (<b>WAN-1 ~ WAN-4</b>) depend on the number of WAN interfaces for the product.</p>
<b>Pass Through Enable</b>	The boxes are checked by default	<p>Check the box to enable the pass through function for the <b>IPSec</b>, <b>PPTP</b>, and <b>L2TP</b>.</p> <p>With the pass through function enabled, the VPN hosts behind the gateway still can connect to remote VPN servers.</p>
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings

## 2.6 Routing

If you have more than one router and subnet, you will need to enable routing function to allow packets to find proper routing path and allow different subnets to communicate with each other. Routing is the process of selecting best paths in a network. It is performed for many kinds of networks, like electronic data networks (such as the Internet), by using packet switching technology. The routing process usually directs forwarding on the basis of routing tables which maintain a record of the routes to various network destinations. Thus, constructing routing tables, which are held in the router's memory, is very important for efficient routing. Most routing algorithms use only one network path at a time.

The routing tables record your pre-defined routing paths for some specific destination subnets. It is **static routing**. However, if the contents of routing tables record the obtained routing paths from neighbor routers by using some protocols, such as RIP, OSPF and BGP. It is **dynamic routing**. These both routing approaches will be illustrated one after one.

# M2M Cellular Gateway

## 2.6.1 Static Routing

Configuration [ Help ]	
Item	Setting
Static Routing	<input checked="" type="checkbox"/> Enable

  

IPv4 Static Routing Rule List [ Add ] [ Delete ]							
ID	Destination IP	Subnet Mask	Gateway IP	Interface	Metric	Enable	Actions

IPv4 Static Routing Rule Configuration	
Item	Setting
Destination IP	<input type="text"/>
Subnet Mask	255.255.255.0 (/24) ▾
Gateway IP	<input type="text"/>
Interface	Auto ▾
Metric	<input type="text"/>
Rule	<input type="checkbox"/> Enable

"Static Routing" function lets you define the routing paths for some dedicated hosts/servers or subnets to store in the routing table of the gateway. The gateway routes incoming packets to different peer gateways based on the routing table. You need to define the static routing information in gateway routing rule list.

When the administrator of the gateway wants to specify what kinds of packets to be transferred via which gateway interface and which peer gateway to their destination. It can be carried out by the "Static Routing" feature. Dedicated packet flows from the Intranet will be routed to their destination via the pre-defined peer gateway and corresponding gateway interface that are defined in the system routing table by manual.

As shown in the diagram, when the destination is Google access, rule 1 set interface as ADSL, routing gateway as IP-DSLAM gateway 192.168.121.253. All the packets to Google will go through WAN-1. And the same way applied to rule 2 of access Yahoo. Rule 2 sets 3G/4G as interface.

# M2M Cellular Gateway

## Static Routing Setting

Go to **Basic Network > Routing > Static Routing** Tab.

There are three configuration windows for static routing feature, including "Configuration", "Static Routing Rule List" and "Static Routing Rule Configuration" windows. "Configuration" window lets you activate the global static routing feature. Even there are already routing rules, if you want to disable routing temporarily, just uncheck the Enable box to disable it. "Static Routing Rule List" window lists all your defined static routing rule entries. Using "Add" or "Edit" button to add and create one new static routing rule or to modify an existed one.

When "**Add**" or "**Edit**" button is applied, the "Static Routing Rule Configuration" window will appear to let you define a static routing rule.

### Enable Static Routing

Just check the **Enable** box to activate the "Static Routing" feature.

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Static Routing	<input checked="" type="checkbox"/> Enable

Static Routing		
Item	Value setting	Description
<b>Static Routing</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this function

### Create / Edit Static Routing Rules

The Static Routing Rule List shows the setup parameters of all static routing rule entries. To configure a static routing rule, you must specify related parameters including the destination IP address and subnet mask of dedicated host/server or subnet, the IP address of peer gateway, the metric and the rule activation.

IPv4 Static Routing Rule List <span>Add</span> <span>Delete</span>							
ID	Destination IP	Subnet Mask	Gateway IP	Interface	Metric	Enable	Actions

The gateway allows you to custom your static routing rules. It supports up to a maximum of 64 rule sets. When **Add** button is applied, **Static Routing Rule Configuration** screen will appear, while the **Edit** button at the end

# M2M Cellular Gateway

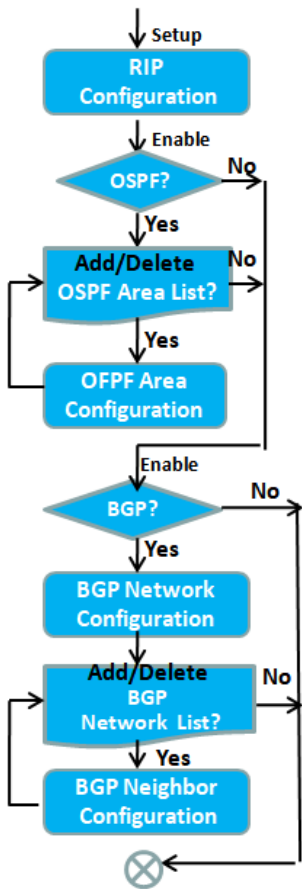

of each static routing rule can let you modify the rule.

IPv4 Static Routing Rule Configuration	
Item	Setting
▶ Destination IP	<input type="text"/>

Dynamic Routing, also called adaptive routing, describes the capability of a system, through which routes are characterized by their destination, to alter the path that the route takes through the system in response to a change in network conditions.

This gateway supports dynamic routing protocols, including RIPv1/RIPv2 (Routing Information Protocol), OSPF (Open Shortest Path First), and BGP (Border Gateway Protocol), for you to establish routing table automatically. The feature of dynamic routing will be very useful when there are lots of subnets in your network. Generally speaking, RIP is suitable for small network. OSPF is more suitable for medium network. BGP is more used for big network infrastructure.

The supported dynamic routing protocols are described as follows.

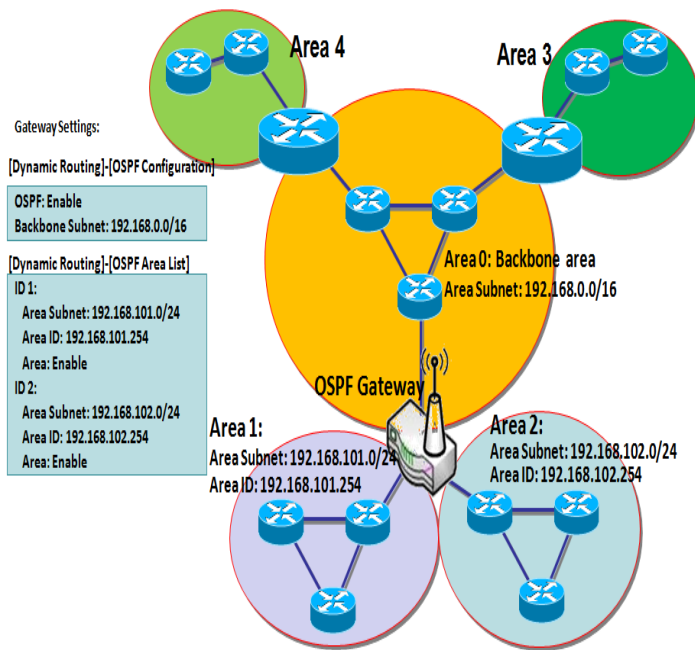

# M2M Cellular Gateway

## RIP Scenario

The Routing Information Protocol (RIP) is one of the oldest distance-vector routing protocols, which employs the hop count as a routing metric. RIP prevents routing loops by implementing a limit on the number of hops allowed in a path from the source to a destination. The maximum number of hops allowed for RIP is 15. This hop limit, however, also limits the size of networks that RIP can support. A hop count of 16 is considered an infinite distance, in other words the route is considered unreachable. RIP implements the split horizon, route poisoning and hold-down mechanisms to prevent incorrect routing information from being propagated.

## OSPF Scenario

Open Shortest Path First (OSPF) is a routing protocol that uses link state routing algorithm. It is the most widely used interior gateway protocol (IGP) in large enterprise networks. It gathers link state information from available routers and constructs a topology map of the network. The topology is presented as a routing table which routes datagrams based solely on the destination IP address.

Network administrator can deploy OSPF gateway in large enterprise network to get its routing table from the enterprise backbone, and forward routing information to other routers, which are no linked to the enterprise backbone. Usually, an OSPF network is subdivided into routing areas to simplify administration and optimize traffic and resource utilization.

As shown in the diagram, OSPF gateway gathers routing information from the backbone gateways in area 0, and will forward its routing information to the routers in area 1 and area 2 which are not in the backbone.

# M2M Cellular Gateway

## BGP Scenario

Border Gateway Protocol (BGP) is a standard exterior gateway protocol designed to exchange routing and reachability information between autonomous systems (AS) on the Internet. It usually makes routing decisions based on paths, network policies, or rule-sets.

Most ISPs use BGP to establish routing between one another (especially for multi-homed). Very large private IP networks also use BGP internally. The major BGP gateway within one AS will link with some other border gateways for exchanging routing information. It will distribute the collected data in AS to all routers in other AS.

As shown in the diagram, BGP 0 is gateway to dominate AS 0 (self IP is 10.100.0.1 and self ID is 100). It links with other BGP gateways in the Internet. The scenario is like Subnet in one ISP to be linked with the ones in other ISPs. By operating with BGP protocol, BGP 0 can gather routing information from other BGP gateways in the Internet. And then it forwards the routing data to the routers in its dominated AS. Finally, the routers resided in AS 0 know how to route packets to other AS.

# M2M Cellular Gateway

## Dynamic Routing Setting

Go to **Basic Network > Routing > Dynamic Routing** Tab.

The dynamic routing setting allows user to customize RIP, OSPF, and BGP protocol through the router based on their office setting.

In the "Dynamic Routing" page, there are several configuration windows for dynamic routing feature. They are the "RIP Configuration" window, "OSPF Configuration" window, "OSPF Area List", "OSPF Area Configuration", "BGP Configuration", "BGP Neighbor List" and "BGP Neighbor Configuration" window. RIP, OSPF and BGP protocols can be configured individually.

The "RIP Configuration" window lets you choose which version of RIP protocol to be activated or disable it. The "OSPF Configuration" window can let you activate the OSPF dynamic routing protocol and specify its backbone subnet. Moreover, the "OSPF Area List" window lists all defined areas in the OSPF network. However, the "BGP Configuration" window can let you activate the BGP dynamic routing protocol and specify its self ID. The "BGP Neighbor List" window lists all defined neighbors in the BGP network.

### RIP Configuration

The RIP configuration setting allows user to customize RIP protocol through the router based on their office setting.

RIP Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ RIP Enable	Disable ▼

RIP Configuration		
Item	Value setting	Description
<b>RIP Enable</b>	Disable is set by default	Select <b>Disable</b> will disable RIP protocol. Select <b>RIP v1</b> will enable RIPv1 protocol. Select <b>RIP v2</b> will enable RIPv2 protocol.

### OSPF Configuration

The OSPF configuration setting allows user to customize OSPF protocol through the router based on their office setting.

# M2M Cellular Gateway

OSPF Configuration	
Item	Setting
▶ OSPF	<input type="checkbox"/> Enable
▶ Router ID	<input type="text"/>
▶ Authentication	None ▾
▶ Backbone Subnet	<input type="text"/>

OSPF Configuration		
Item	Value setting	Description
<b>OSPF</b>	Disable is set by default	Click <b>Enable</b> box to activate the OSPF protocol.
<b>Router ID</b>	1. IPv4 Format 2. A Must filled setting	The Router ID of this router on OSPF protocol
<b>Authentication</b>	None is set by default	The Authentication method of this router on OSPF protocol. Select <b>None</b> will disable Authentication on OSPF protocol. Select <b>Text</b> will enable Text Authentication with entered the Key in this field on OSPF protocol. Select <b>MD5</b> will enable MD5 Authentication with entered the ID and Key in these fields on OSPF protocol.
<b>Backbone Subnet</b>	1. Classless Inter Domain Routing (CIDR) Subnet Mask Notation. (Ex: 192.168.1.0/24) 2. A Must filled setting	The Backbone Subnet of this router on OSPF protocol.

## Create / Edit OSPF Area Rules

The gateway allows you to custom your OSPF Area List rules. It supports up to a maximum of 32 rule sets.

OSPF Area List <input type="button" value="Add"/> <input type="button" value="Delete"/>				
ID	Area Subnet	Area ID	Enable	Actions

When **Add** button is applied, **OSPF Area Rule Configuration** screen will appear.

# M2M Cellular Gateway

## BGP Configuration

The BGP configuration setting allows user to customize BGP protocol through the router setting.

BGP Configuration	
Item	Setting
▶ BGP	<input type="checkbox"/> Enable
▶ ASN	<input type="text"/>
▶ Router ID	<input type="text"/>

Item	Value setting	Description
BGP	The box is unchecked by default	Check the <b>Enable</b> box to activate the BGP protocol.
ASN	1. Numeric String Format 2. A Must filled setting	The ASN Number of this router on BGP protocol. <b>Value Range: 1 ~ 4294967295.</b>
Router ID	1. IPv4 Format 2. A Must filled setting	The Router ID of this router on BGP protocol.

## Create / Edit BGP Network Rules

The gateway allows you to custom your BGP Network rules. It supports up to a maximum of 32 rule sets.

BGP Network List <input type="button" value="Add"/> <input type="button" value="Delete"/>			
ID	Network Subnet	Enable	Actions

When **Add** button is applied, **BGP Network Configuration** screen will appear.

BGP Network Configuration	
Item	Setting
▶ Network Subnet	IP : <input type="text"/> 255.255.255.0 (/24) ▼
▶ Network	<input type="checkbox"/> Enable
<input type="button" value="Save"/>	

Item	Value setting	Description
<b>Network Subnet</b>	1. IPv4 Format	The Network Subnet of this router on BGP Network List. It composes of entered

# M2M Cellular Gateway

	2. A Must filled setting	the IP address in this field and the selected subnet mask.
<b>Network</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration

## Create / Edit BGP Neighbor Rules

The gateway allows you to custom your BGP Neighbor rules. It supports up to a maximum of 32 rule sets.

BGP Neighbor List <input type="button" value="Add"/> <input type="button" value="Delete"/>				
ID	Neighbor IP	Remote ASN	Enable	Actions

When **Add** button is applied, **BGP Neighbor Configuration** screen will appear.

BGP Neighbor Configuration	
Item	Setting
▶ Neighbor IP	<input type="text"/>
▶ Remote ASN	<input type="text"/>
▶ Neighbor	<input type="checkbox"/> Enable
<input type="button" value="Save"/>	

BGP Neighbor Configuration		
Item	Value setting	Description
<b>Neighbor IP</b>	1. IPv4 Format 2. A Must filled setting	The Neighbor IP of this router on BGP Neighbor List.
<b>Remote ASN</b>	1. Numeric String Format 2. A Must filled setting	The Remote ASN of this router on BGP Neighbor List. <b>Value Range: 1 ~ 4294967295.</b>
<b>Neighbor</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration

# M2M Cellular Gateway

## 2.6.3 Routing Information

The routing information allows user to view the routing table and policy routing information. Policy Routing Information is only available when the Load Balance function is enabled and the Load Balance Strategy is By User Policy.

Go to **Basic Network > Routing > Routing Information** Tab.

Routing Table				
Destination IP	Subnet Mask	Gateway IP	Metric	Interface
192.168.1.0	255.255.255.0	0.0.0.0	0	LAN
169.254.0.0	255.255.0.0	0.0.0.0	0	LAN
239.0.0.0	255.0.0.0	0.0.0.0	0	LAN
127.0.0.0	255.0.0.0	0.0.0.0	0	lo

Routing Table		
Item	Value setting	Description
Destination IP	N/A	Routing record of Destination IP. IPv4 Format.
Subnet Mask	N/A	Routing record of Subnet Mask. IPv4 Format.
Gateway IP	N/A	Routing record of Gateway IP. IPv4 Format.
Metric	N/A	Routing record of Metric. Numeric String Format.
Interface	N/A	Routing record of Interface Type. String Format.

Policy Routing Information				
Policy Routing Source	Source IP	Destination IP	Destination Port	WAN Interface
Load Balance	-	-	-	-

Policy Routing Information		
Item	Value setting	Description
Policy Routing Source	N/A	Policy Routing of Source. String Format.
Source IP	N/A	Policy Routing of Source IP. IPv4 Format.
Destination IP	N/A	Policy Routing of Destination IP. IPv4 Format.
Destination Port	N/A	Policy Routing of Destination Port. String Format.
WAN Interface	N/A	Policy Routing of WAN Interface. String Format.

# M2M Cellular Gateway

## 2.7 DNS & DDNS

How does user access your server if your WAN IP address changes all the time? One way is to register a new domain name, and maintain your own DNS server. Another simpler way is to apply a domain name to a third-party DDNS service provider. The service can be free or charged. If you want to understand the basic concepts of DNS and Dynamic DNS, you can refer to Wikipedia website<sup>8,9</sup>.

### 2.7.1 DNS & DDNS Configuration

#### Dynamic DNS

To host your server on a changing IP address, you have to use dynamic domain name service (DDNS). Therefore, anyone wishing to reach your host only needs to know the domain name. Dynamic DNS will map the name of your host to your current IP address, which changes each time you connect your Internet service provider.

The Dynamic DNS service allows the gateway to alias a public dynamic IP address to a static domain name, allowing the gateway to be more easily accessed from various locations on the Internet. As shown in the diagram, user registered a domain name to a

third-party DDNS service provider (NO-IP) to use DDNS function. Once the IP address of designated WAN interface has changed, the dynamic DNS agent in the gateway will inform the DDNS server with the new IP address. The server automatically re-maps your domain name with the changed IP address. So, other hosts or remote users in the Internet world are able to link to your gateway by using your domain name regardless of the changing global IP address.

8 [http://en.wikipedia.org/wiki/Domain\\_Name\\_System](http://en.wikipedia.org/wiki/Domain_Name_System)

9 [http://en.wikipedia.org/wiki/Dynamic\\_DNS](http://en.wikipedia.org/wiki/Dynamic_DNS)

# M2M Cellular Gateway

## DNS & DDNS Setting

Go to **Basic Network > DNS & DDNS > Configuration** Tab.

The DNS & DDNS setting allows user to setup Dynamic DNS feature and DNS redirect rules.

### Setup Dynamic DNS

The gateway allows you to custom your Dynamic DNS settings.

Dynamic DNS <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ DDNS	<input type="checkbox"/> Enable
▶ WAN Interface	WAN-1 ▼
▶ Provider	DynDNS.org(Dynamic) ▼
▶ Host Name	<input type="text"/>
▶ User Name / E-Mail	<input type="text"/>
▶ Password / Key	<input type="text"/>

DDNS (Dynamic DNS) Configuration		
Item	Value setting	Description
<b>DDNS</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this function.
<b>WAN Interface</b>	WAN 1 is set by default	Select the WAN Interface IP Address of the gateway.
<b>Provider</b>	<b>DynDNS.org (Dynamic)</b> is set by default	Select your DDNS provider of Dynamic DNS. It can be <b>DynDNS.org(Dynamic)</b> , <b>DynDNS.org(Custom)</b> , <b>NO-IP.com</b> , etc...
<b>Host Name</b>	1. String format can be any text 2. A Must filled setting	Your registered host name of Dynamic DNS. <b>Value Range: 0 ~ 63 characters.</b>
<b>User Name / E-Mail</b>	1. String format can be any text 2. A Must filled setting	Enter your User name or E-mail addresss of Dynamic DNS.
<b>Password / Key</b>	1. String format can be any text 2. A Must filled setting	Enter your Password or Key of Dynamic DNS.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

# M2M Cellular Gateway

## Setup DNS Redirect

DNS redirect is a special function to redirect certain traffics to a specified host. Administator can manage the internet / intranet traffics that are going to access some restricted DNS and force those traffics to be redirected to a specified host.

DNS Redirect	
Item	Setting
▶ DNS Redirect	<input type="checkbox"/> Enable

DNS Redirect Configuration		
Item	Value setting	Description
<b>DNS Redirect</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this function.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

If you enabled the DNS Redirect function, you have to further specify the redirect rules. According to the rules, the gateway can redirect the traffic that matched the DNS to corresponding pre-defined IP address.

Redirect Rule <span>Add</span> <span>Delete</span>					
ID	Mapping Rule	Condition	Description	Enable	Action

When **Add** button is applied, **Redirect Rule** screen will appear.

Redirect Rule <span>Save</span> <span>Back</span>					
Item	Setting				
Mapping Rule	<table border="1"><thead><tr><th>Domain Name</th><th>IP</th></tr></thead><tbody><tr><td><input type="text"/> (* for Any)</td><td><input type="text"/></td></tr></tbody></table>	Domain Name	IP	<input type="text"/> (* for Any)	<input type="text"/>
Domain Name	IP				
<input type="text"/> (* for Any)	<input type="text"/>				
Condition	<input type="text" value="Always"/> ▼				
Description	<input type="text"/>				
Enable	<input type="checkbox"/> Enable				

Redirect Rule Configuration		
Item	Value setting	Description
<b>Domain Name</b>	1. String format can be any text	Enter a domain name to be redirect. The traffic to specified domain name will be redirect to the following IP address.

# M2M Cellular Gateway

	2. A Must filled setting	<b><i>Value Range:</i></b> at least 1 character is required; '*' for any.
<b>IP</b>	1. IPv4 format 2. A Must filled setting	Enter an IP Address as the target for the DNS redirect.
<b>Condition</b>	1. A Must filled setting <b>2. Always is selected by default.</b>	Specify when will the DNS redirect action can be applied. It can be <b>Always</b> , or <b>WAN Block</b> . <b>Always:</b> The DNS redirect function can be applied to matched DNS all the time. <b>WAN Block:</b> The DNS redirect function can be applied to matched DNS only when the WAN connection is disconnected, or un-reachable.
<b>Description</b>	1. String format can be any text 2. A Must filled setting	Enter a brief description for this rule. <b><i>Value Range:</i></b> 0 ~ 63 characters.
<b>Enable</b>	The box is unchecked by default	Click the <b>Enable</b> button to activate this rule.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

## Chapter 3 Object Definition

### 3.1 Scheduling

Scheduling provides ability of adding/deleting time schedule rules, which can be applied to other functionality.

#### 3.1.1 Scheduling Configuration

Go to **Object Definition > Scheduling > Configuration** tab.

Time Schedule List		
ID	Rule Name	Actions
		<input type="button" value="Add"/> <input type="button" value="Delete"/>

Button description		
Item	Value setting	Description
<b>Add</b>	N/A	Click the <b>Add</b> button to configure time schedule rule
<b>Delete</b>	N/A	Click the <b>Delete</b> button to delete selected rule(s)

When **Add** button is applied, Time Schedule Configuration and Time Period Definition screens will appear.

Time Schedule Configuration	
Item	Setting
▶ Rule Name	<input type="text"/>
▶ Rule Policy	<input type="button" value="Inactivate"/> the Selected Days and Hours Below.

Time Schedule Configuration		
Item	Value Setting	Description
<b>Rule Name</b>	String: any text	Set rule name
<b>Rule Policy</b>	Default Inactivate	Inactivate/activate the function been applied to in the time period below

# M2M Cellular Gateway

Time Period Definition			
ID	Week Day	Start Time (hh:mm)	End Time (hh:mm)
1	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
2	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
3	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
4	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
5	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
6	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
7	-- choose one -- ▼	<input type="text"/>	<input type="text"/>
8	-- choose one -- ▼	<input type="text"/>	<input type="text"/>

Time Period Definition		
Item	Value Setting	Description
<b>Week Day</b>	Select from menu	Select everyday or one of weekday
<b>Start Time</b>	Time format (hh :mm)	Start time in selected weekday
<b>End Time</b>	Time format (hh :mm)	End time in selected weekday
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the time schedule list.

# M2M Cellular Gateway

---

## 3.2 User (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 3.3 Grouping

The Grouping function allows user to make group for some services.

### 3.3.1 Host Grouping

Go to **Object Definition > Grouping > Host Grouping** tab.

The Host Grouping function allows user to make host group for some services, such as QoS, Firewall, and Communication Bus. The supported service types could be different for the purchased product.

Host Group List <input type="button" value="Add"/> <input type="button" value="Delete"/>						
ID	Group Name	Group Type	Member List	Bound Services	Enable	Actions

When **Add** button is applied, **Host Group Configuration** screen will appear.

Host Group Configuration	
Item	Setting
▶ Group Name	<input type="text"/>
▶ Group Type	<input type="text" value="IP Address-based"/> ▼
▶ Member to Join	<input type="text"/> <input type="button" value="Join"/>
▶ Member List	
▶ Bound Services	<input type="checkbox"/> Firewall
▶ Group	<input type="checkbox"/> Enable

Host Group Configuration		
Item	Value setting	Description
<b>Group Name</b>	1. String format can be any text 2. A Must filled setting	Enter a group name for the rule. It is a name that is easy for you to understand.
<b>Group Type</b>	1. <b>IP Address-based</b> is selected by default. 2. A Must filled setting	Select the group type for the host group. It can be <b>IP Address-based</b> , <b>MAC Address-based</b> , or <b>Host Name-based</b> . When <b>IP Address-based</b> is selected, only IP address can be added in <b>Member to Join</b> .

## M2M Cellular Gateway

		<p>When <b>MAC Address-based</b> is selected, only MAC address can be added in <b>Member to Join</b>.</p> <p>When <b>Host Name-based</b> is selected, only host name can be added in <b>Member to Join</b>.</p> <p>Note: The available Group Type can be different for the purchased model.</p>
<b>Member to Join</b>	N/A	<p>Add the members to the group in this field.</p> <p>You can enter the member information as specified in the Member Type above, and press the <b>Join</b> button to add.</p> <p>Only one member can be add at a time, so you have to add the members to the group one by one.</p>
<b>Member List</b>	NA	<p>This field will indicate the hosts (members) contained in the group.</p>
<b>Bound Services</b>	The boxes are unchecked by default	<p>Binding the services that the host group can be applied. If you enable the <b>Firewall</b>, the produced group can be used in firewall service. Same as by enable other available service types.</p> <p><b>Note:</b> The supported service type can be different for the purchased product.</p>
<b>Group</b>	The box is unchecked by default	<p>Check the <b>Enable</b> checkbox to activate the host group rule. So that the group can be bound to selected service(s) for further configuration.</p>
<b>Save</b>	N/A	<p>Click <b>Save</b> to save the settings</p>
<b>Undo</b>	N/A	<p>Click <b>Undo</b> to cancel the settings</p>

# M2M Cellular Gateway

## 3.4 External Server

Go to **Object Definition > External Server > External Server** tab.

The External Server setting allows user to add external server.

### Create External Server

External Server List <input type="button" value="Add"/> <input type="button" value="Delete"/>						
ID	Server Name	Server Type	Server IP/FQDN	Server Port	Server Enable	Actions

When **Add** button is applied, **External Server Configuration** screen will appear.

External Server Configuration	
Item	Setting
▶ Server Name	<input type="text"/>
▶ Server Type	<input type="text" value="Email Server"/> User Name: <input type="text"/> Password: <input type="text"/>
▶ Server IP/FQDN	<input type="text"/>
▶ Server Port	<input type="text" value="25"/>
▶ Server	<input checked="" type="checkbox"/> Enable
<input type="button" value="Save"/> <input type="button" value="Undo"/>	

# M2M Cellular Gateway

## External Server Configuration

Item	Value setting	Description
<b>Sever Name</b>	1. String format can be any text 2. A Must filled setting	Enter a server name. Enter a name that is easy for you to understand.
<b>Server Type</b>	A Must filled setting	<p>Specify the Server Type of the external server, and enter the required settings for the accessing the server.</p> <hr/> <p><b>Email Server</b> (A Must filled setting) :            When <b>Email Server</b> is selected, <b>User Name</b>, and <b>Password</b> are also required.  <b>User Name</b> (String format: any text)  <b>Password</b> (String format: any text)</p> <hr/> <p><b>RADIUS Server</b> (A Must filled setting) :            When <b>RADIUS Server</b> is selected, the following settings are also required.            Primary :  <b>Shared Key</b> (String format: any text)            Authentication Protocol (By default CHAP is selected)            Session Timeout (By default 1)            The values must be between 1 and 60.            Idle Timeout: (By default 1)            The values must be between 1 and 15.            Secondary :  <b>Shared Key</b> (String format: any text)            Authentication Protocol (By default CHAP is selected)            Session Timeout (By default 1)            The values must be between 1 and 60.            Idle Timeout: (By default 1)            The values must be between 1 and 15.</p> <hr/> <p><b>Active Directory Server</b> (A Must filled setting) :            When <b>Active Directory Server</b> is selected, <b>Domain</b> setting is also required.  <b>Domain</b> (String format: any text)</p> <hr/> <p><b>LDAP Server</b> (A Must filled setting) :            When <b>LDAP Server</b> is selected, the following settings are also required.  <b>Base DN</b> (String format: any text)  <b>Identity</b> (String format: any text)  <b>Password</b> (String format: any text)</p> <hr/> <p><b>UAM Server</b> (A Must filled setting) :            When <b>UAM Server</b> is selected, the following settings are also required.  <b>Login URL</b> (String format: any text)  <b>Shared Secret</b> (String format: any text)  <b>NAS/Gateway ID</b> (String format: any text)  <b>Location ID</b> (String format: any text)  <b>Location Name</b> (String format: any text)</p>

# M2M Cellular Gateway

		<p><b>TACACS+ Server</b> (A Must filled setting) :</p> <p>When <b>TACACS+ Server</b> is selected, the following settings are also required.</p> <p><b>Shared Key</b> (String format: any text)</p> <p><b>Session Timeout</b> (String format: any number)</p> <p>The values must be between 1 and 60.</p> <hr/> <p><b>SCEP Server</b> (A Must filled setting) :</p> <p>When <b>SCEP Server</b> is selected, the following settings are also required.</p> <p><b>Path</b> (String format: any text, By default <b>cgi-bin</b> is filled)</p> <p><b>Application</b> (String format: any text, By default <b>pkiclient.exe</b> is filled)</p> <hr/> <p><b>FTP(SFTP) Server</b> (A Must filled setting) :</p> <p>When <b>FTP(SFTP) Server</b> is selected, the following settings are also required.</p> <p><b>User Name</b> (String format: any text)</p> <p><b>Password</b> (String format: any text)</p> <p><b>Protocol</b> (Select <b>FTP</b> or <b>SFTP</b>)</p> <p><b>Encryprion</b> (Select <b>Plain</b>, <b>Explicit FTPS</b> or <b>Implicit FTPS</b>)</p> <p><b>Transfer mode</b> (Select <b>Passive</b> or <b>Active</b>)</p>
<b>Server IP/FQDN</b>	A Must filled setting	Specify the IP address or FQDN used for the external server.
<b>Server Port</b>	A Must filled setting	<p>Specify the Port used for the external server. If you selected a certain server type, the default server port number will be set.</p> <p>For <b>Email Server</b> 25 will be set by default;</p> <p>For <b>Syslog Server</b>, port 514 will be set by default;</p> <p>For <b>RADIUS Server</b>, port 1812 will be set by default;</p> <p>For <b>Active Directory Server</b>, port 389 will be set by default;</p> <p>For <b>LDAP Server</b>, port 389 will be set by default;</p> <p>For <b>UAM Server</b>, port 80 will be set by default;</p> <p>For <b>TACACS+ Server</b>, port 49 will be set by default;</p> <p>For <b>SCEP Server</b>, port 80 will be set by default;</p> <p>For <b>FTP(SFTP) Server</b>, port 21 will be set by default;</p> <p><b>Value Range: 1 ~ 65535.</b></p>
<b>Account Port</b>	<p>1. A Must filled setting</p> <p>2. <b>1813 is set by default</b></p>	<p>Specify the accounting port used if you selected external RADIUS server.</p> <p><b>Value Range: 1 ~ 65535.</b></p>
<b>Server</b>	The box is checked by default	Click <b>Enable to</b> activate this External Server.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the external server list.

## 3.5 Certificate

In cryptography, a public key certificate (also known as a digital certificate or identity certificate) is an electronic document used to prove ownership of a public key. The certificate includes information about the key, information about its owner's identity, and the digital signature of an entity that has verified the certificate's contents are genuine. If the signature is valid, and the person examining the certificate trusts the signer, then they know they can use that key to communicate with its owner<sup>10</sup>.

In a typical public-key infrastructure (PKI) scheme, the signer is a certificate authority (CA), usually a company such as VeriSign which charges customers to issue certificates for them. In a web of trust scheme, the signer is either the key's owner (a self-signed certificate) or other users ("endorsements") whom the person examining the certificate might know and trust. The device also plays as a CA role.

Certificates are an important component of Transport Layer Security (TLS, sometimes called by its older name SSL), where they prevent an attacker from impersonating a secure website or other server. They are also used in other important applications, such as email encryption and code signing. Here, it can be used in IPSec tunneling for user authentication.

### 3.5.1 Configuration

The configuration setting allows user to create Root Certificate Authority (CA) certificate and configure to set enable of SCEP. Root CA is the top-most certificate of the tree, the private key of which is used to "sign" other certificates.

Go to Object Definition > Certificate > Configuration tab.

#### Create Root CA

ID	Name	Subject	Issuer	Vaild To	Action
----	------	---------	--------	----------	--------

When **Generate** button is applied, **Root CA Certificate Configuration** screen will appear. The required information to be filled for the root CA includes the name, key, subject name and validity.

<sup>10</sup> [http://en.wikipedia.org/wiki/Public\\_key\\_certificate](http://en.wikipedia.org/wiki/Public_key_certificate).

# M2M Cellular Gateway

Root CA Certificate Configuration	
Item	Setting
▶ Name	<input type="text"/>
▶ Key	Key Type : <input type="text" value="RSA"/> Key Length : <input type="text" value="512-bits"/> Digest Algorithm : <input type="text" value="MD5"/>
▶ Subject Name	Country(C) : <input type="text"/> State(ST) : <input type="text"/> Location(L) : <input type="text"/> Organization(O) : <input type="text"/> Organization Unit(OU) : <input type="text"/> Common Name(CN) : <input type="text"/> Email : <input type="text"/>
▶ Validity Period	<input type="text" value="20-years"/>

Root CA Certificate Configuration		
Item	Value setting	Description
<b>Name</b>	1. String format can be any text 2. A Must filled setting	Enter a Root CA Certificate name. It will be a certificate file name
<b>Key</b>	A Must filled setting	This field is to specify the key attribute of certificate. <b>Key Type</b> to set public-key cryptosystems. It only supports RSA now. <b>Key Length</b> to set s the size measured in bits of the key used in a cryptographic algorithm. <b>Digest Algorithm</b> to set identifier in the signature algorithm identifier of certificates
<b>Subject Name</b>	A Must filled setting	This field is to specify the information of certificate. <b>Country(C)</b> is the two-letter ISO code for the country where your organization is located. <b>State(ST)</b> is the state where your organization is located. <b>Location(L)</b> is the location where your organization is located. <b>Organization(O)</b> is the name of your organization. <b>Organization Unit(OU)</b> is the name of your organization unit. <b>Common Name(CN)</b> is the name of your organization. <b>Email</b> is the email of your organization. It has to be email address style.
<b>Validity Period</b>	A Must filled setting	This field is to specify the validity period of certificate.

# M2M Cellular Gateway

## Setup SCEP

SCEP Configuration	
Item	Setting
▶ SCEP	<input type="checkbox"/> Enable
▶ Automatically re-enroll aging certificates	<input type="checkbox"/> Enable

SCEP Configuration		
Item	Value setting	Description
<b>SCEP</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate SCEP function.
<b>Automatically re-enroll aging certificates</b>	The box is unchecked by default	When <b>SCEP</b> is activated, check the <b>Enable</b> box to activate this function. It will be automatically check which certificate is aging. If certificate is aging, it will activate SCEP function to re-enroll automatically.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

# M2M Cellular Gateway

## 3.5.2 My Certificate

My Certificate includes a Local Certificate List. Local Certificate List shows all generated certificates by the root CA for the gateway. And it also stores the generated Certificate Signing Requests (CSR) which will be signed by other external CAs. The signed certificates can be imported as the local ones of the gateway.

### Self-signed Certificate Usage Scenario

#### Scenario Application Timing

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself or import any local certificates that are signed by other external CAs. Also import the trusted certificates for other CAs and Clients. In addition, since it has the root CA, it also can sign Certificate Signing Requests (CSR) to form corresponding certificates for others. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

#### Scenario Description

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Import a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also import the certificates of the root CA of the Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to following two sub-sections)

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all

# M2M Cellular Gateway

client hosts in these both subnets can communicate with each other.

## Parameter Setup Example

For Network-A at HQ

Following tables list the parameter configuration as an example for the "My Certificate" function used in the user authentication of IPsec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in following two sections to complete the whole user scenario.

Use default value for those parameters that are not mentioned in the tables.

<b>Configuration Path</b>	[My Certificate]-[Root CA Certificate Configuration]
<b>Name</b>	<b>HQRootCA</b>

## Scenario Operation Procedure

In above diagram, "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

Gateway 1 generates the root CA and a local certificate (HQCRT) that is signed by itself. Import the certificates of the root CA and HQCRT into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

Gateway 2 generates a Certificate Signing Request (BranchCSR) for its own certificate (BranchCRT) (Please generate one not self-signed certificate in the Gateway 2, and click on the "View" button for that CSR. Just downloads it). Take the CSR to be signed by the root CA of Gateway 1 and obtain the BranchCRT certificate (you need rename it). Import the certificate into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of Gateway 2.

Gateway 2 can establish an IPsec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# M2M Cellular Gateway

## My Certificate Setting

Go to Object Definition > Certificate > My Certificate tab.

The My Certificate setting allows user to create local certificates. In "My Certificate" page, there are two configuration windows for the "My Certificate" function. The "Local Certificate List" window shows the stored certificates or CSRs for representing the gateway. The "Local Certificate Configuration" window can let you fill required information necessary for corresponding certificate to be generated by itself, or corresponding CSR to be signed by other CAs.

### Create Local Certificate

Local Certificate List					
ID	Name	Subject	Issuer	Vaild To	Actions

When **Add** button is applied, **Local Certificate Configuration** screen will appear. The required information to be filled for the certificate or CSR includes the name, key and subject name. It is a certificate if the "Self-signed" box is checked; otherwise, it is a CSR.

Local Certificate Configuration	
Item	Setting
▶ Name	<input type="text"/> Self-signed : <input type="checkbox"/>
▶ Key	Key Type : <input type="text" value="RSA"/> Key Length : <input type="text" value="1024-bits"/> Digest Algorithm : <input type="text" value="SHA-1"/>
▶ Subject Name	Country(C) : <input type="text"/> State(ST) : <input type="text"/> Location(L) : <input type="text"/> Organization(O) : <input type="text"/> Organization Unit(OU) : <input type="text"/> Common Name(CN) : <input type="text"/> Email : <input type="text"/>
▶ Extra Attributes	Challenge Password: <input type="text"/> Unstructured Name: <input type="text"/>
▶ SCEP Enrollment	Enable: <input type="checkbox"/> SCEP Server: <input type="text" value="-- Option --"/> <input type="button" value="Add Object"/> CA Certificate: <input type="text"/> CA Encryption Certificate: <input type="text" value="-- Option --"/> (Optional) CA Identifier: <input type="text"/> (Optional)

# M2M Cellular Gateway

Local Certificate Configuration		
Item	Value setting	Description
<b>Name</b>	1. String format can be any text 2. A Must filled setting	Enter a certificate name. It will be a certificate file name If <b>Self-signed</b> is checked, it will be signed by root CA. If <b>Self-signed</b> is not checked, it will generate a certificate signing request (CSR).
<b>Key</b>	A Must filled setting	This field is to specify the key attributes of certificate. <b>Key Type</b> to set public-key cryptosystems. Currently, only RSA is supported. <b>Key Length</b> to set the length in bits of the key used in a cryptographic algorithm. It can be 512/768/1024/1536/2048. <b>Digest Algorithm</b> to set identifier in the signature algorithm identifier of certificates. It can be MD5/SHA-1.
<b>Subject Name</b>	A Must filled setting	This field is to specify the information of certificate. <b>Country(C)</b> is the two-letter ISO code for the country where your organization is located. <b>State(ST)</b> is the state where your organization is located. <b>Location(L)</b> is the location where your organization is located. <b>Organization(O)</b> is the name of your organization. <b>Organization Unit(OU)</b> is the name of your organization unit. <b>Common Name(CN)</b> is the name of your organization. <b>Email</b> is the email of your organization. It has to be email address setting only.
<b>Extra Attributes</b>	A Must filled setting	This field is to specify the extra information for generating a certificate. <b>Challenge Password</b> for the password you can use to request certificate revocation in the future. <b>Unstructured Name</b> for additional information.
<b>SCEP Enrollment</b>	A Must filled setting	This field is to specify the information of SCEP. If user wants to generate a certificate signing request (CSR) and then signed by SCEP server online, user can check the <b>Enable</b> box. Select a <b>SCEP Server</b> to identify the SCEP server for use. The server detailed information could be specified in External Servers. Refer to <b>Object Definition &gt; External Server &gt; External Server</b> . You may click <b>Add Object</b> button to generate. Select a <b>CA Certificate</b> to identify which certificate could be accepted by SCEP server for authentication. It could be generated in Trusted Certificates. Select an optional <b>CA Encryption Certificate</b> , if it is required, to identify which certificate could be accepted by SCEP server for encryption data information. It could be generated in Trusted Certificates. Fill in optional <b>CA Identifier</b> to identify which CA could be used for signing certificates.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.
<b>Back</b>	N/A	When the <b>Back</b> button is clicked, the screen will return to previous page.

When **Import** button is applied, an Import screen will appear. You can import a certificate from an existed certificate file, or directly paste a PEM encoded string as the certificate.

# M2M Cellular Gateway

**Import**

No file chosen

---

**PEM Encoded**

Import Item	Value setting	Description
<b>Import</b>	A Must filled setting	Select a certificate file from user's computer, and click the <b>Apply</b> button to import the specified certificate file to the gateway.
<b>PEM Encoded</b>	1. String format can be any text 2. A Must filled setting	This is an alternative approach to import a certificate. You can directly fill in (Copy and Paste) the PEM encoded certificate string, and click the <b>Apply</b> button to import the specified certificate to the gateway.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to import the certificate.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the My Certificates page.

# M2M Cellular Gateway

## 3.5.3 Trusted Certificate

Trusted Certificate includes Trusted CA Certificate List, Trusted Client Certificate List, and Trusted Client Key List. The Trusted CA Certificate List places the certificates of external trusted CAs. The Trusted Client Certificate List places the others' certificates what you trust. And the Trusted Client Key List places the others' keys what you trusted.

### Self-signed Certificate Usage Scenario

Scenario Application Timing (same as the one described in "My Certificate" section)

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself. Also imports the trusted certificates for other CAs and Clients. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

Scenario Description (same as the one described in "My Certificate" section)

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Import a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition, also imports the certificates of the root CA of Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to "My Certificate" and "Issue Certificate" sections).

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all client hosts in these both subnets can communicate with each other.

Parameter Setup Example (same as the one described in "My Certificate" section)

# M2M Cellular Gateway

For Network-A at HQ

Following tables list the parameter configuration as an example for the "Trusted Certificate" function used in the user authentication of IPsec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Issue Certificate" sections to complete the setup for the whole user scenario.

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate Import from a File]
<b>File</b>	<i>BranchCRT.crt</i>

For Network-B at Branch Office

Following tables list the parameter configuration as an example for the "Trusted Certificate" function used in the user authentication of IPsec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Issued Certificate" sections to complete the setup for the whole user scenario.

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted CA Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted CA Certificate Import from a File]
<b>File</b>	<i>HQRootCA.crt</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate List]
<b>Command Button</b>	<i>Import</i>

<b>Configuration Path</b>	[Trusted Certificate]-[Trusted Client Certificate Import from a File]
<b>File</b>	<i>HQCRT.crt</i>

Scenario Operation Procedure (same as the one described in "My Certificate" section)

In above diagram, the "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. The "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

In Gateway 2 import the certificates of the root CA and HQCRT that were generated and signed by Gateway 1 into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

## M2M Cellular Gateway

---

Import the obtained BranchCRT certificate (the derived BranchCSR certificate after Gateway 1's root CA signature) into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of the Gateway 2. For more details, refer to the Network-B operation procedure in "My Certificate" section of this manual.

Gateway 2 can establish an IPsec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# M2M Cellular Gateway

## Trusted Certificate Setting

Go to Object Definition > Certificate > Trusted Certificate tab.

The Trusted Certificate setting allows user to import trusted certificates and keys.

### Import Trusted CA Certificate

ID	Name	Subject	Issuer	Valid To	Actions
----	------	---------	--------	----------	---------

When **Import** button is applied, a **Trusted CA import** screen will appear. You can import a Trusted CA certificate from an existed certificate file, or directly paste a PEM encoded string as the certificate.

Trusted CA Certificate List		
Item	Value setting	Description
<b>Import from a File</b>	A Must filled setting	Select a CA certificate file from user's computer, and click the <b>Apply</b> button to import the specified CA certificate file to the gateway.
<b>Import from a PEM</b>	1. String format can be any text 2. A Must filled setting	This is an alternative approach to import a CA certificate. You can directly fill in (Copy and Paste) the PEM encoded CA certificate string, and click the <b>Apply</b> button to import the specified CA certificate to the gateway.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to import the certificate.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the Trusted Certificates page.

Instead of importing a Trusted CA certificate with mentioned approaches, you can also get the CA certificate from the SECP server.

If **SCEP** is enabled (Refer to **Object Definition > Certificate > Configuration**), you can click **Get CA** button, a Get CA Configuration screen will appear.

# M2M Cellular Gateway

Get CA Configuration	
Item	Setting
▶ SCEP Server	--- Option --- ▼ <input type="button" value="Add Object"/>
▶ CA Identifier	<input type="text"/> (Optional)

Get CA Configuration		
Item	Value setting	Description
SCEP Server	A Must filled setting	Select a <b>SCEP Server</b> to identify the SCEP server for use. The server detailed information could be specified in External Servers. Refer to <b>Object Definition &gt; External Server &gt; External Server</b> . You may click <b>Add Object</b> button to generate.
CA Identifier	1. String format can be any text	Fill in optional <b>CA Identifier</b> to identify which CA could be used for signing certificates.
Save	N/A	Click <b>Save</b> to save the settings.
Close	N/A	Click the <b>Close</b> button to return to the Trusted Certificates page.

## Import Trusted Client Certificate

Trusted Client Certificate List <input type="button" value="Import"/> <input type="button" value="Delete"/>					
ID	Name	Subject	Issuer	Vaild To	Actions

When **Import** button is applied, a **Trusted Client Certificate Import** screen will appear. You can import a Trusted Client Certificate from an existed certificate file, or directly paste a PEM encoded string as the certificate.

<input type="button" value="Apply"/> <input type="button" value="Cancel"/>	

# M2M Cellular Gateway

Item	Value setting	Description
<b>Import from a File</b>	A Must filled setting	Select a certificate file from user's computer, and click the <b>Apply</b> button to import the specified certificate file to the gateway.
<b>Import from a PEM</b>	1. String format can be any text 2. A Must filled setting	This is an alternative approach to import a certificate. You can directly fill in (Copy and Paste) the PEM encoded certificate string, and click the <b>Apply</b> button to import the specified certificate to the gateway.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to import certificate.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the Trusted Certificates page.

## Import Trusted Client Key

Trusted Client Key List		
ID	Name	Actions
<input type="button" value="Import"/> <input type="button" value="Delete"/>		

When **Import** button is applied, a **Trusted Client Key Import** screen will appear. You can import a Trusted Client Key from an existed file, or directly paste a PEM encoded string as the key.

Trusted Client Key Import from a File
<input type="button" value="Choose File"/> No file chosen
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>

Trusted Client Key Import from a PEM
<div style="border: 1px solid gray; height: 100px; width: 100%;"></div>
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>

Trusted Client Key List		
Item	Value setting	Description
<b>Import from a File</b>	A Must filled setting	Select a certificate key file from user's computer, and click the <b>Apply</b> button to import the specified key file to the gateway.
<b>Import from a PEM</b>	1. String format can be any text 2. A Must filled setting	This is an alternative approach to import a certificate key. You can directly fill in (Copy and Paste) the PEM encoded certificate key string, and click the <b>Apply</b> button to import the specified certificate key to the gateway.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to import the certificate key.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to discard the import operation and the screen will return to the Trusted Certificates page.

# M2M Cellular Gateway

## 3.5.4 Issue Certificate

When you have a Certificate Signing Request (CSR) that needs to be certificated by the root CA of the device, you can issue the request here and let Root CA sign it. There are two approaches to issue a certificate. One is from a CSR file importing from the managing PC and another is copy-paste the CSR codes in gateway's web-based utility, and then click on the "Sign" button.

If the gateway signs a CSR successfully, the "Signed Certificate View" window will show the resulted certificate contents. In addition, a "Download" button is available for you to download the certificate to a file in the managing PC.

### Self-signed Certificate Usage Scenario

Scenario Application Timing (same as the one described in "My Certificate" section)

When the enterprise gateway owns the root CA and VPN tunneling function, it can generate its own local certificates by being signed by itself. Also imports the trusted certificates for other CAs and Clients. These certificates can be used for two remote peers to make sure their identity during establishing a VPN tunnel.

Scenario Description (same as the one described in "My Certificate" section)

Gateway 1 generates the root CA and a local certificate (HQCRT) signed by itself. Also imports a trusted certificate (BranchCRT) –a BranchCSR certificate of Gateway 2 signed by root CA of Gateway 1.

Gateway 2 creates a CSR (BranchCSR) to let the root CA of the Gateway 1 sign it to be the BranchCRT certificate. Import the certificate into the Gateway 2 as a local certificate. In addition,

## M2M Cellular Gateway

also imports the certificates of the root CA of the Gateway 1 into the Gateway 2 as the trusted ones. (Please also refer to "My Certificate" and "Trusted Certificate" sections).

Establish an IPSec VPN tunnel with IKE and X.509 protocols by starting from either peer, so that all client hosts in these both subnets can communicate with each other.

Parameter Setup Example (same as the one described in "My Certificate" section)

For Network-A at HQ

Following tables list the parameter configuration as an example for the "Issue Certificate" function used in the user authentication of IPSec VPN tunnel establishing, as shown in above diagram. The configuration example must be combined with the ones in "My Certificate" and "Trusted Certificate" sections to complete the setup for whole user scenario.

<b>Configuration Path</b>	[Issue Certificate]-[Certificate Signing Request Import from a File]
<b>Browse</b>	<i>C:/BranchCSR</i>
<b>Command Button</b>	<i>Sign</i>

<b>Configuration Path</b>	[Issue Certificate]-[Signed Certificate View]
<b>Command Button</b>	<i>Download</i> (default name is "issued.crt")

Scenario Operation Procedure (same as the one described in "My Certificate" section)

In above diagram, the "Gateway 1" is the gateway of Network-A in headquarters and the subnet of its Intranet is 10.0.76.0/24. It has the IP address of 10.0.76.2 for LAN interface and 203.95.80.22 for WAN-1 interface. The "Gateway 2" is the gateway of Network-B in branch office and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. They both serve as the NAT security gateways.

Gateway 1 generates the root CA and a local certificate (HQCRT) that is signed by itself. Import the certificates of the root CA and HQCRT into the "Trusted CA Certificate List" and "Trusted Client Certificate List" of Gateway 2.

Gateway 2 generates a Certificate Signing Request (BranchCSR) for its own certificate BranchCRT to be signed by root CA (Please generate one not self-signed certificate in the Gateway 2, and click on the "View" button for that CSR. Just downloads it). Take the CSR to be signed by the root CA of the Gateway 1 and obtain the BranchCRT certificate (you need rename it). Import the certificate into the "Trusted Client Certificate List" of the Gateway 1 and the "Local Certificate List" of the Gateway 2.

Gateway 2 can establish an IPSec VPN tunnel with "Site to Site" scenario and IKE and X.509 protocols to Gateway 1.

Finally, the client hosts in two subnets of 10.0.75.0/24 and 10.0.76.0/24 can communicate with each other.

# M2M Cellular Gateway

## Issue Certificate Setting

Go to Object Definition > Certificate > Issue Certificate tab.

The Issue Certificate setting allows user to import Certificate Signing Request (CSR) to be signed by root CA.

### Import and Issue Certificate

The screenshot displays the 'Issue Certificate' configuration page. It is divided into two main sections. The top section, titled 'Certificate Signing Request (CSR) Import from a File', includes a 'Sign' button and a file selection area with a 'Choose File' button and the text 'No file chosen'. The bottom section, titled 'Certificate Signing Request (CSR) Import from a PEM', features a large text input field for pasting a PEM encoded certificate and a 'Sign' button.

Certificate Signing Request (CSR) Import from a File		
Item	Value setting	Description
<b>Certificate Signing Request (CSR) Import from a File</b>	A Must filled setting	Select a certificate signing request file you're your computer for importing to the gateway.
<b>Certificate Signing Request (CSR) Import from a PEM</b>	1. String format can be any text 2. A Must filled setting	Enter (copy-paste) the certificate signing request PEM encoded certificate to the gateway.
<b>Sign</b>	N/A	When root CA is exist, click the <b>Sign</b> button sign and issue the imported certificate by root CA.

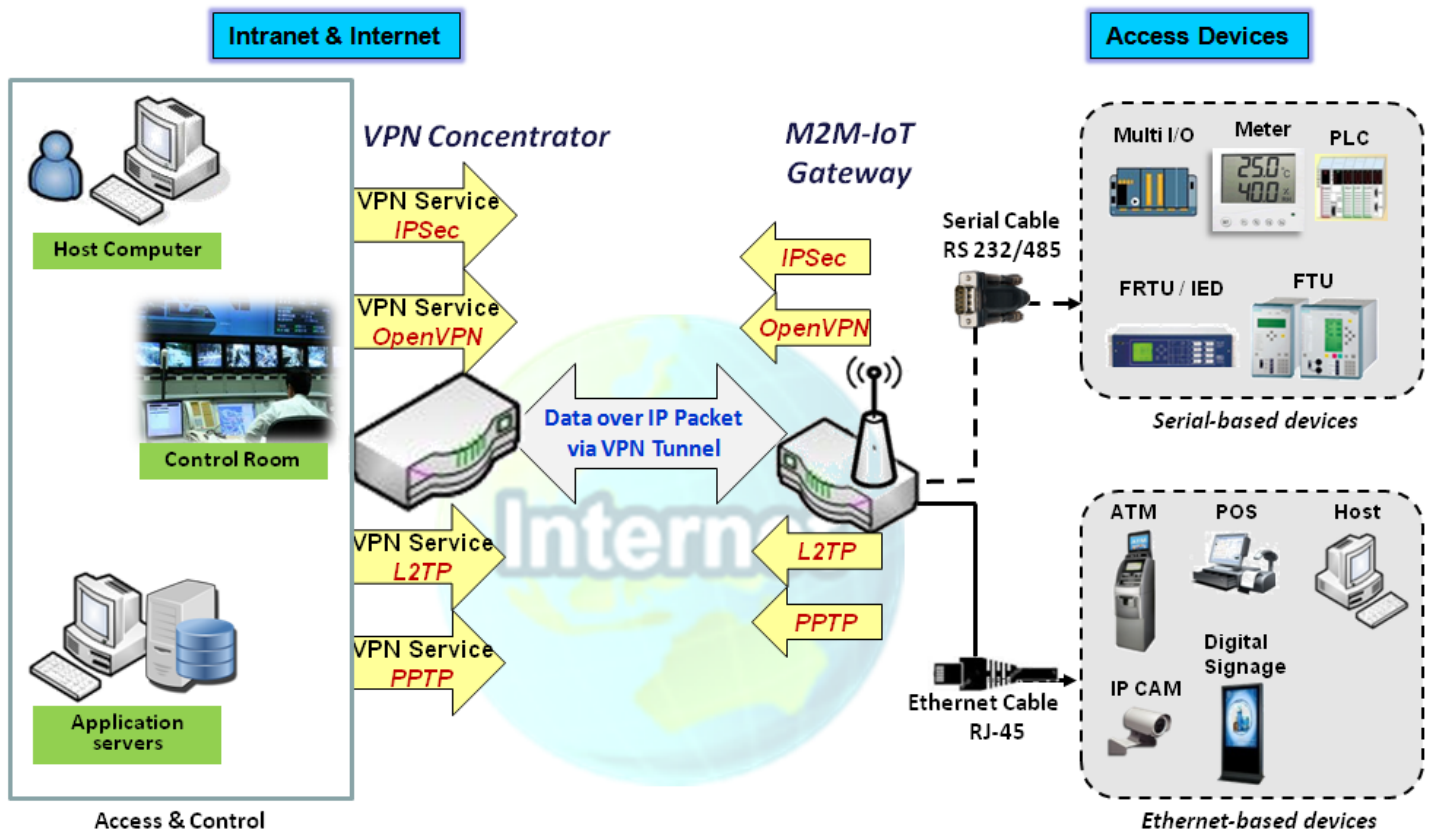

# Chapter 4 Field Communication (not supported)

Not supported feature for the purchased product, leave it as blank.

## Chapter 5 Security

### 5.1 VPN

A virtual private network (VPN) extends a private network across a public network, such as the Internet. It enables a computer to send and receive data across shared or public networks as if it were directly connected to the private network, while benefitting from the functionality, security and management policies of the private network. This is done by establishing a virtual point-to-point connection through the use of dedicated connections, encryption, or a combination of the two. The tunnel technology supports data confidentiality, data origin authentication and data integrity of network information by utilizing encapsulation protocols, encryption algorithms, and hashing algorithms.

The product series supports different tunneling technologies to establish secure tunnels between multiple sites for data transferring, such as IPSec, OpenVPN, L2TP (over IPSec), PPTP and GRE. Besides, some advanced functions, like Full Tunnel, Tunnel Failover, Tunnel Load Balance, NetBIOS over IPSec, NAT Traversal and Dynamic VPN, are also supported.

# M2M Cellular Gateway

## 5.1.1 IPSec

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ IPSec	<input type="checkbox"/> Enable
▶ NetBIOS over IPSec	<input type="checkbox"/> Enable
▶ NAT Traversal	<input checked="" type="checkbox"/> Enable
▶ Max. Concurrent IPSec Tunnels	3

Dynamic VPN List <span>Add</span> <span>Delete</span> <span>Refresh</span>					
ID	Tunnel Name	Interface	Connected Client	Enable	Actions

  

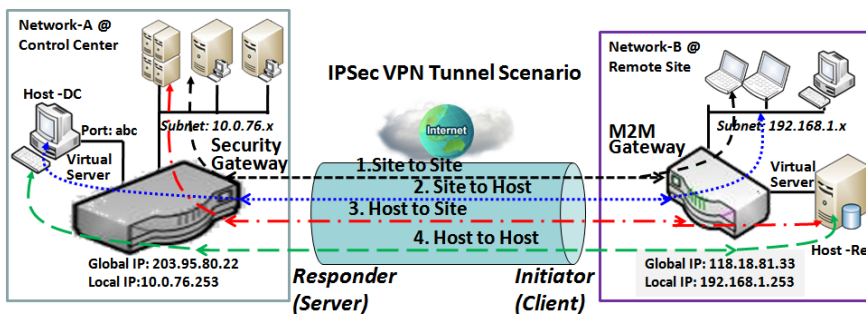

IPSec Tunnel List <span>Add</span> <span>Delete</span> <span>Refresh</span>								
ID	Tunnel Name	Interface	Tunnel Scenario	Remote Gateway	Remote Subnet	Status	Enable	Actions

Internet Protocol Security (IPSec) is a protocol suite for securing Internet Protocol (IP) communications by authenticating and encrypting each IP packet of a communication session. IPSec includes protocols for establishing mutual authentication between agents at the beginning of the session and negotiation of cryptographic keys to be used during the session.

An IPSec VPN tunnel is established between IPSec client and server. Sometimes, we call the IPSec VPN client as the initiator and the IPSec VPN server as the responder. This gateway can be configured as different roles and establish number of tunnels with various remote devices. Before going to setup the VPN connections, you may need to decide the scenario type for the tunneling.

### IPSec Tunnel Scenarios

- ←----- Site to Site: Tunnel between M2M gateway /w 192.168.1.x subnet and UTM /w 10.0.76.x subnet
- ←----- Site to Host: Tunnel between M2M gateway /w 192.168.1.x subnet and Host-DC under UTM
- ←----- Host to Site: Tunnel between Host-Re under M2M Gateway and UTM /w 10.0.76.x subnet
- ←----- Host to Host: Tunnel between Host-Re under M2M Gateway and Host-DC under UTM

To build IPSec tunnel, you need to fill in remote gateway global IP, and optional subnet if the hosts behind IPSec peer can access to remote site or hosts. Under such configuration, there are four scenarios:

**Site to Site:** You need to setup remote gateway IP and subnet of both gateways. After the IPSec tunnel established, hosts behind both gateways can communication each

# M2M Cellular Gateway

other through the tunnel.

**Site to Host:** Site to Host is suitable for tunneling between clients in a subnet and an application server (host). As in the diagram, the clients behind the M2M gateway can access to the host "Host-DC" located in the control center through Site to Host VPN tunnel.

**Host to Site:** On the contrast, for a single host (or mobile user to) to access the resources located in an intranet, the Host to Site scenario can be applied.

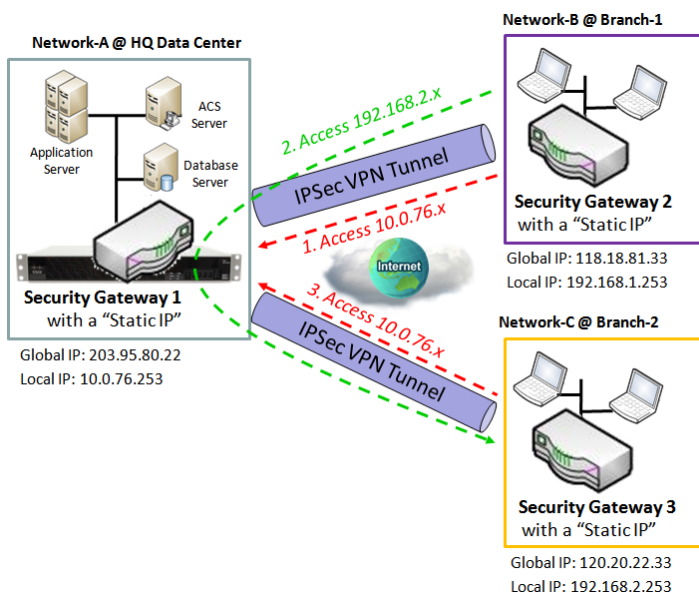

**Host to Host:** Host to Host is a special configuration for building a VPN tunnel between two single hosts.

## Site to Site with "Full Tunnel" enabled

In "Site to Site" scenario, client hosts in remote site can access the enterprise resources in the Intranet of HQ gateway via an established IPSec tunnel, as described above. However, Internet access originates from remote site still go through its regular WAN connection. If you want all packets from remote site to be routed via this IPSec tunnel, including HQ server access and Internet access, you can just enable the "Full Tunnel" setting. As a result, every time users surfs web or searching data on Internet, checking personal emails, or HQ server access, all traffics will go through the secure IPSec tunnel and route by the Security Gateway in control center.

## Site to Site with "Hub and Spoke" mechanism

For a control center to manage the secure Intranet among all its remote sites, there is a simple configuration, called **Hub and Spoke**, for the whole VPN network. A Hub and Spoke VPN Network is set up in organizations with centralized control center over all its remote sites, like shops or offices. The control center acts as the Hub role and the remote shops or Offices act as Spokes. All VPN tunnels from remote sites terminate at this Hub, which acts as a concentrator. Site-to-site connections between spokes do not exist. Traffic originating from one spoke and destined for another spoke has to go via the Hub. Under such configuration, you don't need to maintain VPN tunnels between each two remote clients.

# M2M Cellular Gateway

## Dynamic VPN Server Scenario

Dynamic VPN Server Scenario is an efficient way to build multiple tunnels with remote sites, especially for mobile clients with dynamic IP. In this scenario, gateway can only be role of server (responder), and it must have a "Static IP" or "FQDN". It can allow many VPN clients (initiators) to connect to with various tunnel scenarios. In short, with a simple Dynamic VPN server setting, many VPN clients can connect to the server. But, in comparison to the Hub and Spoke mechanism, it is not allowed to directly communicate between any two clients via the Dynamic VPN server.

For the purchased gateway, you can configure one Dynamic VPN server for each WAN interface.

# M2M Cellular Gateway

## IPSec Setting

Go to **Security > VPN > IPSec** tab.

The IPSec Setting allows user to create and configure IPSec tunnels.

### Enable IPSec

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ IPSec	<input type="checkbox"/> Enable
▶ NetBIOS over IPSec	<input type="checkbox"/> Enable
▶ NAT Traversal	<input checked="" type="checkbox"/> Enable
▶ Max. Concurrent IPSec Tunnels	3

Configuration Window		
Item	Value setting	Description
<b>IPsec</b>	Unchecked by default	Click the <b>Enable</b> box to enable IPSec function.
<b>NetBIOS over IPSec</b>	Unchecked by default	Click the <b>Enable</b> box to enable NetBIOS over IPSec function.
<b>NAT Traversal</b>	Checked by default	Click the <b>Enable</b> box to enable NAT Traversal function.
<b>Max. Concurrent IPSec Tunnels</b>	Depends on Product specification.	The specified value will limit the maximum number of simultaneous IPSec tunnel connection. The default value can be different for the purchased model.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

### Create/Edit IPSec tunnel

Ensure that the IPSec enable box is checked to enable before further configuring the IPSec tunnel settings.

IPSec Tunnel List <span>Add</span> <span>Delete</span> <span>Refresh</span>								
ID	Tunnel Name	Interface	Tunnel Scenario	Remote Gateway	Remote Subnet	Status	Enable	Actions

When **Add/Edit** button is applied, a series of configuration screens will appear. They are Tunnel Configuration, Local & Remote Configuration, Authentication, IKE Phase, IKE Proposal Definition, IPSec Phase, and IPSec Proposal Definition. You have to configure the tunnel details for both local and remote VPN devices.

# M2M Cellular Gateway

Tunnel Configuration	
Item	Setting
▶ Tunnel	<input type="checkbox"/> Enable
▶ Tunnel Name	IPSec #1
▶ Interface	WAN1 ▼
▶ Tunnel Scenario	Site to Site ▼
▶ Tunnel TCP MSS	Auto ▼ 0 (64~1500 Bytes)
▶ Hub and Spoke	None ▼
▶ Operation Mode	Always on ▼
▶ Encapsulation Protocol	ESP ▼

Tunnel Configuration Window		
Item	Value setting	Description
<b>Tunnel</b>	Unchecked by default	Check the <b>Enable</b> box to activate the IPSec tunnel
<b>Tunnel Name</b>	1. A Must fill setting 2. String format can be any text	Enter a tunnel name. Enter a name that is easy for you to identify. <b>Value Range: 1 ~ 19 characters.</b>
<b>Interface</b>	1. A Must fill setting 2. <b>WAN 1</b> is selected by default	Select the interface on which IPSec tunnel is to be established. It can be the available WAN and LAN interfaces.
<b>Tunnel Scenario</b>	1. A Must fill setting 2. <b>Site to site</b> is selected by default	Select an IPSec tunneling scenario from the dropdown box for your application. Select <b>Site-to-Site</b> , <b>Site-to-Host</b> , <b>Host-to-Site</b> , or <b>Host-to-Host</b> . If LAN interface is selected, only <b>Host-to-Host</b> scenario is available.  With <b>Site-to-Site</b> or <b>Site-to-Host</b> or <b>Host-to-Site</b> , IPSec operates in tunnel mode. The difference among them is the number of subnets. With <b>Host-to-Host</b> , IPSec operates in transport mode.
<b>Tunnel TCP MSS</b>	1. An optional setting 2. <b>Auto</b> is set by default	Select from the dropdown box to define the size of Tunnel TCP MSS. Select <b>Auto</b> , and all devices will adjust this parameter automatically. Select <b>Manual</b> , and specify an expected value for Tunnel TCP MSS. <b>Value Range: 64 ~ 1500 bytes.</b>
<b>Hub and Spoke</b>	1. An optional setting 2. <b>None</b> is set by default	Select from the dropdown box to setup your gateway for Hub-and-Spoke IPSec VPN Deployments. Select <b>None</b> if your deployments will not support Hub or Spoke encryption. Select <b>Hub</b> for a Hub role in the IPSec design. Select <b>Spoke</b> for a Spoke role in the IPSec design. Note: Hub and Spoke are available only for Site-to-Site VPN tunneling specified in Tunnel Scenario. It is not available for Dynamic VPN tunneling application.
<b>Operation Mode</b>	1. A Must fill setting 2. <b>Always on</b> is selected	Define operation mode for the IPSec Tunnel. It can be <b>Always On</b> , or <b>Failover</b> . If this tunnel is set as a failover tunnel, you need to further select a primary

# M2M Cellular Gateway

	by default	tunnel from which to failover to. Note: <b>Failover</b> mode is not available for the gateway with single WAN.
<b>Encapsulation Protocol</b>	1. A Must fill setting 2. <b>ESP</b> is selected by default	Select the Encapsulation Protocol from the dropdown box for this IPsec tunnel. Available encapsulations are <b>ESP</b> and <b>AH</b> .

▣ Local & Remote Configuration

Item	Setting		
▶ Local Subnet List	ID	Subnet IP Address	Subnet Mask
	1	192.168.123.0	255.255.255.0(/24) ▼
	Delete		
Add			
▶ Redirect Traffic	<input type="checkbox"/> Enable		
▶ Full Tunnel	<input type="checkbox"/> Enable		
▶ Remote Subnet List	ID	Subnet IP Address	Subnet Mask
	1		255.255.255.0(/24) ▼
	Delete		
Add			
▶ Remote Gateway	(IP Address/FQDN)		

Local & Remote Configuration Window		
Item	Value setting	Description
<b>Local Subnet List</b>	A Must fill setting	Specify the Local Subnet IP address and Subnet Mask. Click the Add or Delete button to add or delete a Local Subnet.  Note_1: When Dynamic VPN option in Tunnel Scenario is selected, there will be only one subnet available. Note_2: When Host-to-Site or Host-to-Host option in Tunnel Scenario is selected, Local Subnet will not be available. Note_3: When Hub and Spoke option in Hub and Spoke is selected, there will be only one subnet available.
<b>Redirect Traffic</b>	Unchecked by default	Click <b>Enable</b> box to activate the Redirect Traffic function.  Note: Redirect Traffic is available only for Host-to-Site specified in Tunnel Scenario. By default, it is disabled, so it can prevent the un-expected and dangerous access to the peer subnet. If you enable such function, all the network devices behind the VPN host (actually, it is an NAT gateway) can access to the peer subnet with the host IP.
<b>Full Tunnel</b>	Unchecked by default	Click <b>Enable</b> box to enable Full Tunnel. Note: Full tunnel is available only for Site-to-Site specified in Tunnel Scenario.

# M2M Cellular Gateway

<b>Remote Subnet List</b>	A Must fill setting	Specify the Remote Subnet IP address and Subnet Mask. Click the Add or Delete button to add or delete Remote Subnet setting.
<b>Remote Gateway</b>	1. A Must fill setting. 2. Format can be a ipv4 address or FQDN	Specify the Remote Gateway.

Authentication	
Item	Setting
▶ Key Management	IKE+Pre-shared Key ▼ <input type="text"/> (Min. 8 characters)
▶ Local ID	Type: User Name ▼ ID: <input type="text"/> (Optional)
▶ Remote ID	Type: User Name ▼ ID: <input type="text"/>

Authentication Configuration Window		
Item	Value setting	Description
<b>Key Management</b>	1. A Must fill setting 2. Pre-shared Key 8 to 32 characters.	Select Key Management from the dropdown box for this IPSec tunnel. <b>IKE+Pre-shared Key:</b> user needs to set a key (8 ~ 32 characters). <b>IKE+X.509:</b> user needs Certificate to authenticate. IKE+X.509 will be available only when Certificate has been configured properly. Refer to Certificate section of this manual and also <b>Object Definition &gt; Certificate</b> in web-based utility. <b>Manually:</b> user needs to enter key ID to authenticate. Manual key configuration will be explained in the following Manual Key Management section.
<b>Local ID</b>	An optional setting	Specify the Local ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Local ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Local ID and enter the User@FQDN. Select <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).
<b>Remote ID</b>	An optional setting	Specify the Remote ID for this IPSec tunnel to authenticate. Select <b>User Name</b> for Remote ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Remote ID and enter the User@FQDN. Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number). Note: Remote ID will be not available when Dynamic VPN option in Tunnel Scenario is selected.

# M2M Cellular Gateway

IKE Phase	
Item	Setting
▶ IKE Version	v1 ▼
▶ Negotiation Mode	Main Mode ▼
▶ X-Auth	None ▼ <input type="button" value="X-Auth Account"/> (Optional) User Name : <input type="text"/> Password : <input type="text"/>
▶ Dead Peer Detection (DPD)	<input checked="" type="checkbox"/> Enable Timeout : <input type="text" value="180"/> (seconds) Delay : <input type="text" value="30"/> (seconds)
▶ Phase1 Key Life Time	<input type="text" value="3600"/> (seconds) (Max. 86400)

IKE Phase Window		
Item	Value setting	Description
<b>IKE Version</b>	1. A must fill setting 2. v1 is selected by default	Specify the IKE version for this IPsec tunnel. Select v1 or v2 Note: IKE versions will not be available when Dynamic VPN option in Tunnel Scenario is selected, or AH option in Encapsulation Protocol is selected.
<b>Negotiation Mode</b>	Main Mode is set by default default	Specify the Negotiation Mode for this IPsec tunnel. Select Main Mode or Aggressive Mode.
<b>X-Auth</b>	None is selected by default	Specify the X-Auth role for this IPsec tunnel. Select Server, Client, or None. Selected None no X-Auth authentication is required. Selected Server this gateway will be an X-Auth server. Click on the X-Auth Account button to create remote X-Auth client account. Selected Client this gateway will be an X-Auth client. Enter User name and Password to be authenticated by the X-Auth server gateway. Note: X-Auth Client will not be available for Dynamic VPN option selected in Tunnel Scenario.
<b>Dead Peer Detection (DPD)</b>	1. Checked by default 2. Default Timeout 180s and Delay 30s	Click <b>Enable</b> box to enable <b>DPD</b> function. Specify the <b>Timeout</b> and <b>Delay</b> time in seconds. <b>Value Range: 0 ~ 999 seconds for Timeout and Delay.</b>
<b>Phase1 Key Life Time</b>	1. A Must fill setting 2. Default 3600s 3. Max. 86400s	Specify the Phase1 Key Life Time. <b>Value Range: 30 ~ 86400.</b>

# M2M Cellular Gateway

IKE Proposal Definition				
ID	Encryption	Authentication	DH Group	Definition

## Manual Key Management

When the Manually option is selected for Key Management as described in Authentication Configuration Window, a series of configuration windows for Manual IPsec Tunnel configuration will appear. The configuration windows are the Local & Remote Configuration, the Authentication, and the Manual Proposal.

Authentication	
Item	Setting
▶ Key Management	Manually ▼
▶ Local ID	Type: KEY ID ▼ ID: <input type="text"/> (Optional)
▶ Remote ID	Type: KEY ID ▼ ID: <input type="text"/>

Authentication Window		
Item	Value setting	Description

# M2M Cellular Gateway

<b>Key Management</b>	A Must fill setting	Select Key Management from the dropdown box for this IPsec tunnel. In this section <b>Manually</b> is the option selected.
<b>Local ID</b>	An optional setting	Specify the <b>Local ID</b> for this IPsec tunnel to authenticate. Select the <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).
<b>Remote ID</b>	An optional setting	Specify the <b>Remote ID</b> for this IPsec tunnel to authenticate. Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number).

Local & Remote Configuration	
Item	Setting
▶ Local Subnet	<input type="text"/>
▶ Local Netmask	<input type="text" value="255.255.255.0"/>
▶ Remote Subnet	<input type="text"/>
▶ Remote Netmask	<input type="text"/>
▶ Remote Gateway	<input type="text"/> (IP Address/FQDN)

Local & Remote Configuration Window		
Item	Value setting	Description
<b>Local Subnet</b>	A Must fill setting	Specify the Local Subnet IP address and Subnet Mask.
<b>Local Netmask</b>	A Must fill setting	Specify the Local Subnet Mask.
<b>Remote Subnet</b>	A Must fill setting	Specify the Remote Subnet IP address
<b>Remote Netmask</b>	A Must fill setting	Specify the Remote Subnet Mask.
<b>Remote Gateway</b>	1. A Must fill setting 2. An IPv4 address or FQDN format	Specify the Remote Gateway. The Remote Gateway

Under the Manually Key Management authentication configuration, only one subnet is supported for both Local and Remote IPsec peer.

Manual Proposal	
Item	Setting
▶ Outbound SPI	0x <input type="text"/>
▶ Inbound SPI	0x <input type="text"/>
▶ Encryption	DES <input type="text"/>
▶ Authentication	None <input type="text"/>

Manual Proposal Window		
Item	Value setting	Description
<b>Outbound SPI</b>	Hexadecimal format	Specify the Outbound SPI for this IPsec tunnel.

# M2M Cellular Gateway

		<i>Value Range: 0 ~ FFFF.</i>
<b>Inbound SPI</b>	Hexadecimal format	Specify the Inbound SPI for this IPsec tunnel. <i>Value Range: 0 ~ FFFF.</i>
<b>Encryption</b>	1. A Must fill setting 2. Hexadecimal format	Specify the Encryption Method and Encryption key. Available encryption methods are DES/3DES/AES-128/AES-192/AES-256. The key length for DES is 16, 3DES is 48, AES-128 is 32, AES-192 is 48, and AES-256 is 64. Note: When <b>AH</b> option in Encapsulation is selected, encryption will not be available.
<b>Authentication</b>	1. A Must fill setting 2. Hexadecimal format	Specify the Authentication Method and Authentication key. Available encryptions are None/MD5/SHA1/SHA2-256. The key length for MD5 is 32, SHA1 is 40, and SHA2-256 is 64. Note: When <b>AH</b> option in Encapsulation Protocol is selected, None option in Authentication will not be available.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings
<b>Back</b>	N/A	Click <b>Back</b> to return to the previous page.

## Create/Edit Dynamic VPN Server List

Dynamic server List <input type="button" value="Add"/> <input type="button" value="Delete"/>					
ID	Tunnel Name	Interface	Connected Client	Enable	Actions

Similar to create an IPsec VPN Tunnel for site/host to site/host scenario, when **Edit** button is applied a series of configuration screen will appear. They are Tunnel Configuration, Local & Remote Configuration, Authentication, IKE Phase, IKE Proposal Definition, IPsec Phase, and IPsec Proposal Definition. You have to configure the tunnel details for the gateway as a Dynamic VPN server.

Note: For the purchased gateway, you can configure one Dynamic VPN server for each WAN interface.

Tunnel Configuration	
Item	Setting
▶ Tunnel	<input type="checkbox"/> Enable
▶ Tunnel Name	<input type="text" value="Dynamic IPsec1"/>

Authentication Configuration Window		
Item	Value setting	Description
<b>Key Management</b>	1. A Must fill setting	Select Key Management from the dropdown box for this IPsec tunnel.

# M2M Cellular Gateway

	2. Pre-shared Key 8 to 32 characters.	<b>IKE+Pre-shared Key:</b> user needs to set a key (8 ~ 32 characters).
<b>Local ID</b>	An optional setting	Specify the Local ID for this IPsec tunnel to authenticate. Select <b>User Name</b> for Local ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Local ID and enter the User@FQDN. Select <b>Key ID</b> for Local ID and enter the Key ID (English alphabet or number).
<b>Remote ID</b>	An optional setting	Specify the Remote ID for this IPsec tunnel to authenticate. Select <b>User Name</b> for Remote ID and enter the username. The username may include but can't be all numbers. Select <b>FQDN</b> for Local ID and enter the FQDN. Select <b>User@FQDN</b> for Remote ID and enter the User@FQDN. Select <b>Key ID</b> for Remote ID and enter the Key ID (English alphabet or number). Note: Remote ID will be not available when Dynamic VPN option in Tunnel Scenario is selected.

For the rest IKE Phase, IKE Proposal Definition, IPsec Phase, and IPsec Proposal Definition settings, they are the same as that of creating an IPsec Tunnel described in previous section. Please refer to the related description.

# M2M Cellular Gateway

## 5.1.2 OpenVPN

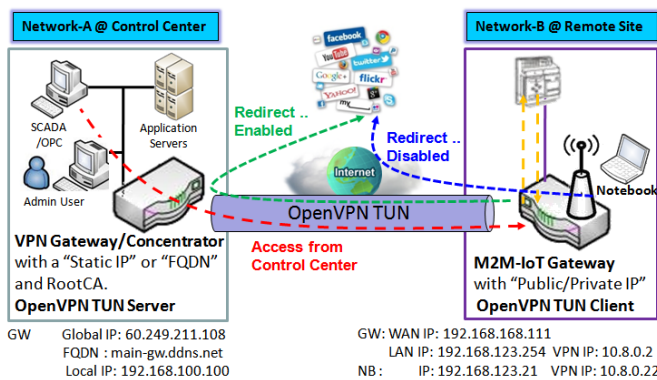

OpenVPN is an application that implements virtual private network (VPN) techniques for creating secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. It uses a custom security protocol that utilizes SSL/TLS for key exchange. It is capable of traversing network address translators (NATs) and firewalls.

OpenVPN allows peers to authenticate each other using a Static Key (pre-shared key) or certificates. When used in a multi-client-server configuration, it allows the server to release an authentication certificate for every client, using signature and certificate authority. It uses the OpenSSL encryption library extensively, as well as the SSLv3/TLSv1 protocol, and contains many security and control features.

OpenVPN Tunneling is a Client and Server based tunneling technology. The OpenVPN Server must have a Static IP or a FQDN, and maintain a Client list. The OpenVPN Client may be a mobile user or mobile site with public IP or private IP, and requesting the OpenVPN tunnel connection. The product supports both OpenVPN Server and OpenVPN Client features to meet different application requirements.

There are two OpenVPN connection scenarios. They are the TAP and TUN scenarios. The product can create either a layer-3 based IP tunnel (TUN), or a layer-2 based Ethernet TAP that can carry any type of Ethernet traffic. In addition to configuring the device as a Server or Client, you have to specify which type of OpenVPN connection scenario is to be adopted.

### OpenVPN TUN Scenario

1. M2M-IoT Gateway (as OpenVPN TUN Client) connects to peer VPN Gateway/Concentrator (as OpenVPN TUN Server).
2. M2M-IoT Gateway will be assigned 10.8.0.2 IP Address after OpenVPN TUN Connection established. (10.8.0.x is a virtual subnet)
3. Local networked device will get a virtual IP 10.8.0.x if its traffic goes through the OpenVPN TUN connection (when NAT disabled & Redirect Internet Traffic enabled).
4. SCADA Server in Control Center can access remote attached device(s) with the assigned IP Address 10.8.0.2.

solution.

The term "TUN" mode is referred to routing mode and operates with layer 3 packets. In routing mode, the VPN client is given an IP address on a different subnet than the local LAN under the OpenVPN server. This virtual subnet is created for connecting to any remote VPN computers. In routing mode, the OpenVPN server creates a "TUN" interface with its own IP address pool which is different to the local LAN. Remote hosts that dial-in will get an IP address inside the virtual network and will have access only to the server where OpenVPN resides.

If you want to offer remote access to a VPN server from client(s), and inhibit the access to remote LAN resources under VPN server, OpenVPN TUN mode is the simplest

As shown in the diagram, the M2M-IoT Gateway is configured as an OpenVPN TUN Client, and connects to an OpenVPN TUN Server. Once the OpenVPN TUN connection is established, the connected TUN client will be

# M2M Cellular Gateway

assigned a virtual IP (10.8.0.2) which is belong to a virtual subnet that is different to the local subnet in Control Center. With such connection, the local networked devices will get a virtual IP 10.8.0.x if its traffic goes through the OpenVPN TUN connection when Redirect Internet Traffic settings is enabled; Besides, the SCADA Server in Control Center can access remote attached serial device(s) with the virtual IP address (10.8.0.2).

## OpenVPN TAP Scenario

1. M2M-IoT Gateway (as OpenVPN TAP Client) connects to peer VPN Gateway/Concentrator (as OpenVPN TAP Server).
2. M2M-IoT Gateway will be assigned **192.168.100.210** IP Address after OpenVPN TAP Connection established. (**same subnet as in Control Center**)
3. SCADA Server in Control Center can access remote attached device(s) with the assigned IP Address 192.168.100.210.

The term "TAP" is referred to bridge mode and operates with layer 2 packets. In bridge mode, the VPN client is given an IP address on the same subnet as the LAN resided under the OpenVPN server. Under such configuration, the OpenVPN client can directly access to the resources in LAN. If you want to offer remote access to the entire remote LAN for VPN client(s), you have to setup OpenVPN in "TAP" bridge mode.

As shown in the diagram, the M2M-IoT Gateway is configured as an OpenVPN TAP Client, and connects to an OpenVPN TAP Server. Once the OpenVPN TAP connection is established, the connected TAP client will be assigned a virtual IP (192.168.100.210) which is the same subnet as

that of local subnet in Control Center. With such connection, the SCADA Server in Control Center can access remote attached serial device(s) with the virtual IP address (192.168.100.210).

# M2M Cellular Gateway

## Open VPN Setting

Go to **Security > VPN > OpenVPN** tab.

The OpenVPN setting allows user to create and configure OpenVPN tunnels.

### Enable OpenVPN

Enable OpenVPN and select an expected configuration, either server or client, for the gateway to operate.

Configuration	
Item	Setting
▶ OpenVPN	<input type="checkbox"/> Enable
▶ Server / Client	Server ▾

Configuration		
Item	Value setting	Description
<b>OpenVPN</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the OpenVPN function.
<b>Server/Client</b>	Server Configuration is selected by default.	When <b>Server</b> is selected, as the name indicated, server configuration will be displayed below for further setup. When <b>Client</b> is selected, you can specify the client settings in another client configuration window.

# M2M Cellular Gateway

## As an OpenVPN Server

If **Server** is selected, an OpenVPN Server Configuration screen will appear. **OpenVPN Server Configuration** window can let you enable the OpenVPN server function, specify the virtual IP address of OpenVPN server, when remote OpenVPN clients dial in, and the authentication protocol.

The OpenVPN Server supports up to 4 TUN / TAP tunnels at the same time.

<b>Port</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>4430</b> is set.</li> </ol>	Specify the <b>Port</b> for connecting to the OpenVPN Server. <b>Value Range: 1 ~ 65535.</b>
<b>Tunnel Scenario</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>TUN</b> is selected.</li> </ol>	Specify the type of <b>Tunnel Scenario</b> for connecting to the OpenVPN Server. It can be <b>TUN</b> for TUN tunnel scenario, or <b>TAP</b> for TAP tunnel scenario.
<b>Authorization Mode</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. By default <b>Static Key</b> is selected.</li> </ol>	Specify the authorization mode for the OpenVPN Server. <ul style="list-style-type: none"> <li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Server Cert.</b> and <b>DH PEM</b> will be displayed. <b>CA Cert.</b> could be generated in Certificate. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate.</b> <b>Server Cert.</b> could be generated in Certificate. Refer to <b>Object Definition &gt; Certificate &gt; My Certificate.</b></li> <li>• <b>Static Key</b> -&gt;The OpenVPN will use static key (pre-shared) authorization mode, and the following items <b>Local Endpoint IP Address</b>, <b>Remote Endpoint IP Address</b> and <b>Static Key</b> will be displayed. Note: Static Key will be available only when TUN is chosen in Tunnel Scenario.</li> </ul>
<b>Local Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Local Endpoint IP Address</b> of this OpenVPN gateway. <b>Value Range: The IP format is 10.8.0.x, the range of x is 1~254.</b> Note: Local Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Remote Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Remote Endpoint IP Address</b> of the peer OpenVPN gateway. <b>Value Range: The IP format is 10.8.0.x, the range of x is 1~254.</b> Note: Remote Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Static Key</b>	A Must filled setting	Specify the <b>Static Key</b> . Note: Static Key will be available only when Static Key is chosen in Authorization Mode.
<b>Server Virtual IP</b>	A Must filled setting	Specify the <b>Server Virtual IP</b> . <b>Value Range: The IP format is 10.y.0.0, the range of y is 1~254.</b> Note: Server Virtual IP will be available only when TLS is chosen in Authorization Mode.
<b>DHCP-Proxy Mode</b>	<ol style="list-style-type: none"> <li>1. A Must filled setting</li> <li>2. The box is checked by default.</li> </ol>	Check the <b>Enable</b> box to activate the <b>DHCP-Proxy Mode</b> . Note: DHCP-Proxy Mode will be available only when TAP is chosen in Tunnel Device.
<b>IP Pool</b>	A Must filled setting	Specify the virtual <b>IP pool</b> setting for the OpenVPN server. You have to specify the <b>Starting Address</b> and <b>Ending Address</b> as the IP address pool for the OpenVPN clients. Note: IP Pool will be available only when TAP is chosen in Tunnel Device, and DHCP-Proxy Mode is unchecked (disabled).

# M2M Cellular Gateway

<b>Gateway</b>	A Must filled setting	Specify the <b>Gateway</b> setting for the OpenVPN server. It will be assigned to the connected OpenVPN clients. Note: Gateway will be available only when TAP is chosen in Tunnel Device, and DHCP-Proxy Mode is unchecked (disabled).
<b>Netmask</b>	By default - <b>select one</b> - is selected.	Specify the <b>Netmask</b> setting for the OpenVPN server. It will be assigned to the connected OpenVPN clients. <b><u>Value Range:</u> 255.255.255.0/24 (only support class C)</b>  Note_1: Netmask will be available when TAP is chosen in Tunnel Device, and DHCP-Proxy Mode is unchecked (disabled). Note_2: Netmask will also be available when TUN is chosen in Tunnel Device.
<b>Redirect Default Gateway</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>Redirect Default Gateway</b> function.
<b>Encryption Cipher</b>	1. A Must filled setting. 2. By default <b>Blowfish</b> is selected.	Specify the <b>Encryption Cipher</b> from the dropdown list. It can be <b>Blowfish/AES-256/AES-192/AES-128/None</b> .
<b>Hash Algorithm</b>	By default <b>SHA-1</b> is selected.	Specify the <b>Hash Algorithm</b> from the dropdown list. It can be <b>SHA-1/MD5/MD4/SHA2-256/SHA2-512/None/Disable</b> .
<b>LZO Compression</b>	By default <b>Adaptive</b> is selected.	Specify the <b>LZO Compression</b> scheme. It can be <b>Adaptive/YES/NO/Default</b> .
<b>Persis Key</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Key</b> function.
<b>Persis Tun</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Tun</b> function.
<b>Advanced Configuration</b>	N/A	Click the <b>Edit</b> button to specify the <b>Advanced Configuration</b> setting for the OpenVPN server. If the button is clicked, <b>Advanced Configuration</b> will be displayed below.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the changes.

OpenVPN Client Configuration		
Item	Value setting	Description
<b>OpenVPN Client Name</b>	A Must filled setting	The <b>OpenVPN Client Name</b> will be used to identify the client in the tunnel list. <b>Value Range:</b> 1 ~ 32 characters.
<b>Interface</b>	1. A Must filled setting 2. By default <b>WAN-1</b> is selected.	Define the physical interface to be used for this OpenVPN Client tunnel.
<b>Protocol</b>	1. A Must filled setting 2. By default <b>TCP</b> is selected.	Define the <b>Protocol</b> for the OpenVPN Client. <ul style="list-style-type: none"> <li>• Select <b>TCP</b> -&gt;The OpenVPN will use TCP protocol, and <b>Port</b> will be set as 443 automatically.</li> <li>• Select <b>UDP</b> -&gt; The OpenVPN will use UDP protocol, and <b>Port</b> will be set as 1194 automatically.</li> </ul>
<b>Port</b>	1. A Must filled setting 2. By default <b>443</b> is set.	Specify the <b>Port</b> for the OpenVPN Client to use. <b>Value Range:</b> 1 ~ 65535.
<b>Tunnel Scenario</b>	1. A Must filled setting 2. By default <b>TUN</b> is selected.	Specify the type of <b>Tunnel Scenario</b> for the OpenVPN Client to use. It can be <b>TUN</b> for TUN tunnel scenario, or <b>TAP</b> for TAP tunnel scenario.
<b>Remote IP/FQDN</b>	A Must filled setting	Specify the <b>Remote IP/FQDN</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the IP address or FQDN.
<b>Remote Subnet</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate remote subnet function, and specify <b>Remote Subnet</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the remote subnet address and remote subnet mask.
<b>Redirect Internet Traffic</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>Redirect Internet Traffic</b> function.
<b>NAT</b>	1. An Optional setting. 2. The box is unchecked by default.	Check the <b>Enable</b> box to activate the <b>NAT</b> function.
<b>Authorization Mode</b>	1. A Must filled setting 2. By default <b>TLS</b> is selected.	Specify the authorization mode for the OpenVPN Server. <ul style="list-style-type: none"> <li>• <b>TLS</b> -&gt;The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b>, <b>Client Cert.</b> and <b>Client Key</b> will be displayed. <b>CA Cert.</b> could be selected in Trusted CA Certificate List. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>. <b>Client Cert.</b> could be selected in Local Certificate List. Refer to <b>Object Definition &gt; Certificate &gt; My Certificate</b>. <b>Client Key</b> could be selected in Trusted Client key List. Refer to <b>Object Definition &gt; Certificate &gt; Trusted Certificate</b>.</li> <li>• <b>Static Key</b> -&gt;The OpenVPN will use static key authorization mode, and the following items <b>Local Endpoint IP Address</b>, <b>Remote Endpoint IP Address</b> and <b>Static Key</b> will be displayed.</li> </ul>
<b>Local Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Local Endpoint IP Address</b> of this OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Local Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.

# M2M Cellular Gateway

<b>Remote Endpoint IP Address</b>	A Must filled setting	Specify the virtual <b>Remote Endpoint IP Address</b> of the peer OpenVPN gateway. <b>Value Range:</b> The IP format is 10.8.0.x, the range of x is 1~254. Note: Remote Endpoint IP Address will be available only when Static Key is chosen in Authorization Mode.
<b>Static Key</b>	A Must filled setting	Specify the <b>Static Key</b> . Note: Static Key will be available only when Static Key is chosen in Authorization Mode.
<b>Encryption Cipher</b>	By default <b>Blowfish</b> is selected.	Specify the <b>Encryption Cipher</b> . It can be <b>Blowfish/AES-256/AES-192/AES-128/None</b> .
<b>Hash Algorithm</b>	By default <b>SHA-1</b> is selected.	Specify the <b>Hash Algorithm</b> . It can be <b>SHA-1/MD5/MD4/SHA2-256/SHA2-512/None/Disable</b> .
<b>LZO Compression</b>	By default <b>Adaptive</b> is selected.	Specify the <b>LZO Compression</b> scheme. It can be <b>Adaptive/YES/NO/Default</b> .
<b>Persis Key</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Key</b> function.
<b>Persis Tun</b>	1. An Optional setting. 2. The box is checked by default.	Check the <b>Enable</b> box to activate the <b>Persis Tun</b> function.
<b>Advanced Configuration</b>	N/A	Click the <b>Edit</b> button to specify the <b>Advanced Configuration</b> setting for the OpenVPN server. If the button is clicked, <b>Advanced Configuration</b> will be displayed below.
<b>Tunnel</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate this OpenVPN tunnel.

Layer 2 Tunneling Protocol (L2TP) is a tunneling protocol used to support virtual private networks (VPNs) or as part of the delivery of services by ISPs. It does not provide any encryption or confidentiality by itself. Rather, it relies on an encryption protocol that it passes within the tunnel to provide privacy. This Gateway can behave as a L2TP server and a L2TP client both at the same time.

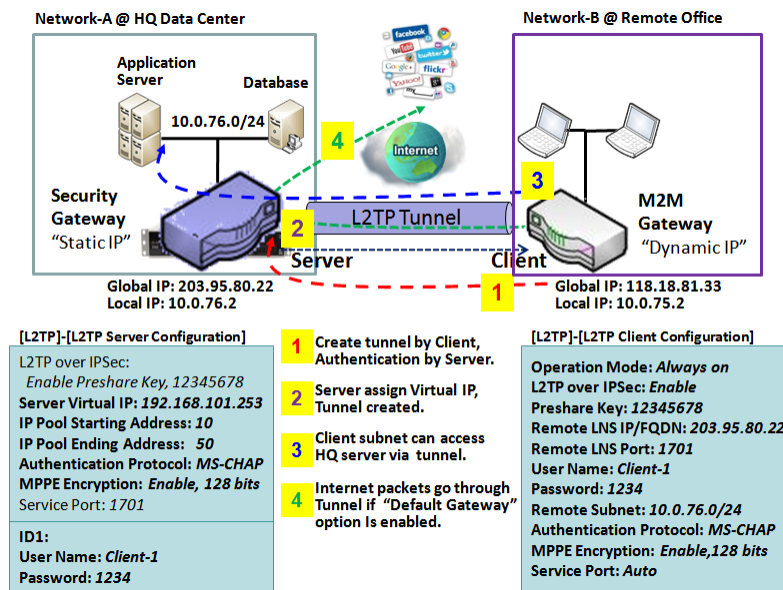

**L2TP Server:** It must have a static IP or a FQDN for clients to create L2TP tunnels. It also maintains “User Account list” (user name/ password) for client login authentication; There is a virtual IP pool to assign virtual IP to each connected L2TP client.

**L2TP Client:** It can be mobile users or gateways in remote offices with dynamic IP. To setup tunnel, it should get “user name”, “password” and server’s global IP. In addition, it is required to identify the operation mode for each tunnel as main connection, failover for another tunnel, or load balance tunnel to increase overall bandwidth. It needs to decide “Default Gateway” or “Remote Subnet” for packet flow. Moreover, you can also define what kind of traffics will pass through the L2TP tunnel in the “Default Gateway / Remote Subnet”

# M2M Cellular Gateway

parameter.

Besides, for the L2TP client peer, a Remote Subnet item is required. It is for the Intranet of L2TP server peer. So, at L2TP client peer, the packets whose destination is in the dedicated subnet will be transferred via the L2TP tunnel. Others will be transferred based on current routing policy of the gateway at L2TP client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the L2TP client peer, all packets, including the Internet accessing of L2TP client peer, will go through the established L2TP tunnel. That means the remote L2TP server peer controls the flow of any packets from the L2TP client peer. Certainly, those packets come through the

L2TP tunnel.

# M2M Cellular Gateway

## L2TP Setting

Go to **Security > VPN > L2TP** tab.

The L2TP setting allows user to create and configure L2TP tunnels.

### Enable L2TP

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ L2TP	<input type="checkbox"/> Enable
▶ Client/Server	Server ▼

#### Enable L2TP Window

Item	Value setting	Description
<b>L2TP</b>	Unchecked by default	Click the <b>Enable</b> box to activate L2TP function.
<b>Client/Server</b>	A Must filled setting	Specify the role of L2TP. Select <b>Server</b> or <b>Client</b> role your gateway will take. Below are the configuration windows for L2TP Server and for Client.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings

### As a L2TP Server

When select **Server** in Client/Server, the L2TP server Configuration will appear.

▶ Tunnel	<input type="checkbox"/> Enable

L2TP Client Configuration		
Item	Setting	Description
<b>Tunnel Name</b>	A Must filled setting	Enter a tunnel name. Enter a name that is easy for you to identify. <b>Value Range:</b> 1 ~ 32 characters.
<b>Interface</b>	A Must filled setting	Define the selected interface to be the used for this L2TP tunnel (WAN-1 is available only when WAN-1 interface is enabled)

# M2M Cellular Gateway

		The same applies to other WAN interfaces (e.g. <b>WAN-2</b> ).
<b>Operation Mode</b>	1. A Must filled setting 2. <b>Always on</b> is selected by default	Define operation mode for the L2TP Tunnel. It can be <b>Always On</b> , or <b>Failover</b> . If this tunnel is set as a failover tunnel, you need to further select a primary tunnel from which to failover to. Note: <b>Failover</b> mode is not available for the gateway with single WAN.
<b>L2TP over IPsec</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate L2TP over IPsec, and further specify a Pre-shared Key ( <b>8~32 characters</b> ).
<b>Remote LNS IP/FQDN</b>	A Must filled setting	Enter the public IP address or the FQDN of the L2TP server.
<b>Remote LNS Port</b>	1. A Must filled setting 2. <b>1701</b> is set by default	Enter the Remote LNS Port for this L2TP tunnel. <b>Value Range: 1 ~ 65535.</b>
<b>User Name</b>	A Must filled setting	Enter the <b>User Name</b> for this L2TP tunnel to be authenticated when connect to L2TP server. <b>Value Range: 1 ~ 32 characters.</b>
<b>Password</b>	A Must filled setting	Enter the <b>Password</b> for this L2TP tunnel to be authenticated when connect to L2TP server.
<b>Tunneling Password(Optional)</b>	The box is unchecked by default	Enter the <b>Tunneling Password</b> for this L2TP tunnel to authenticate.
<b>Remote Subnet</b>	A Must filled setting	Specify the remote subnet for this L2TP tunnel to reach L2TP server. The Remote Subnet format must be IP address/netmask (e.g. 10.0.0.2/24). It is for the Intranet of L2TP VPN server. So, at L2TP client peer, the packets whose destination is in the dedicated subnet will be transferred via the L2TP VPN tunnel. Others will be transferred based on current routing policy of the security gateway at L2TP client peer. If you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a default gateway setting for the L2TP client peer, all packets, including the Internet accessing of L2TP Client peer, will go through the established L2TP VPN tunnel. That means the remote L2TP VPN server controls the flow of any packets from the L2TP client peer. Certainly, those packets come through the L2TP VPN tunnel.
<b>Authentication Protocol</b>	1. A Must filled setting 2. Unchecked by default	Specify one or multiple <b>Authentication Protocol</b> for this L2TP tunnel. Available authentication methods are <b>PAP / CHAP / MS-CHAP / MS-CHAP v2</b> .
<b>MPPE Encryption</b>	1. Unchecked by default 2. an optional setting	Specify whether L2TP server supports <b>MPPE Protocol</b> . Click the <b>Enable</b> box to enable MPPE. Note: when MPPE Encryption is enabled, the Authentication Protocol <b>PAP / CHAP</b> options will not be available.
<b>LCP Echo Type</b>	1. Auto is set by default	Specify the LCP Echo Type for this L2TP tunnel. It can be <b>Auto</b> , <b>User-defined</b> , or <b>Disable</b> . <b>Auto</b> : the system sets the Interval and Max. Failure Time. <b>User-defined</b> : enter the Interval and Max. Failure Time. The default value for Interval is 30 seconds, and Maximum Failure Times is 6 Times. <b>Disable</b> : disable the LCP Echo. <b>Value Range: 1 ~ 99999 for Interval Time, 1~999 for Failure Time.</b>
<b>Service Port</b>	A Must filled setting	Specify the <b>Service Port</b> for this L2TP tunnel to use. It can be <b>Auto</b> , ( <b>1701</b> ) for

# M2M Cellular Gateway

---

		<b>Cisco), or User-defined.</b> <b>Auto:</b> The system determines the service port. <b>1701 (for Cisco):</b> The system use port 1701 for connecting with CISCO L2TP Server. <b>User-defined:</b> Enter the service port. The default value is 0. <b><i>Value Range: 0 ~ 65535.</i></b>
<b>Tunnel</b>	Unchecked by default	Check the <b>Enable</b> box to enable this L2TP tunnel.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings.

Point-to-Point Tunneling Protocol (PPTP) is a method for implementing virtual private networks. PPTP uses a control channel over TCP and a GRE tunnel operating to encapsulate PPP packets. It is a client-server based technology. There are various levels of authentication and encryption for PPTP tunneling, usually natively as standard features of the Windows PPTP stack. The security gateway can play either "PPTP Server" role or "PPTP Client" role for a PPTP VPN tunnel, or both at the same time for different tunnels. PPTP tunnel process is nearly the same as L2TP.

**PPTP Server:** It must have a static IP or a FQDN for clients to create PPTP tunnels. It also maintains "User Account list" (user name / password) for client login authentication; There is a virtual IP pool to assign virtual IP to each connected PPTP client.

**PPTP Client:** It can be mobile users or gateways in remote offices with dynamic IP. To setup tunnel, it should get "user name", "password" and server's global IP. In addition, it is required to identify the operation mode for each tunnel as main connection, failover for another tunnel, or load balance tunnel to increase overall bandwidth. It needs to decide "Default Gateway" or "Remote Subnet" for packet flow. Moreover, you can also

# M2M Cellular Gateway

define what kind of traffics will pass through the PPTP tunnel in the “Default Gateway / Remote Subnet” parameter.

Besides, for the PPTP client peer, a Remote Subnet item is required. It is for the Intranet of PPTP server peer. So, at PPTP client peer, the packets whose destination is in the dedicated subnet will be transferred via the PPTP tunnel. Others will be transferred based on current routing policy of the gateway at PPTP client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the PPTP client peer, all packets, including the Internet accessing of PPTP client peer, will go through the established PPTP tunnel. That means the remote PPTP server peer controls the flow of

any packets from the PPTP client peer. Certainly, those packets come through the PPTP tunnel.

# M2M Cellular Gateway

## PPTP Setting

Go to **Security > VPN > PPTP** tab.

The PPTP setting allows user to create and configure PPTP tunnels.

### Enable PPTP

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ PPTP	<input type="checkbox"/> Enable
▶ Client/Server	Server ▼

Enable PPTP Window		
Item	Value setting	Description
<b>PPTP</b>	Unchecked by default	Click the <b>Enable</b> box to activate PPTP function.
<b>Client/Server</b>	A Must fill setting	Specify the role of PPTP. Select <b>Server</b> or <b>Client</b> role your gateway will take. Below are the configuration windows for PPTP Server and for Client.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings.

### As a PPTP Server

The gateway supports up to a maximum of 10 PPTP user accounts.

When **Server** in the Client/Server field is selected, the PPTP server configuration window will appear.

# M2M Cellular Gateway

## 5.1.5 GRE

Configuration [ Help ]	
Item	Setting
GRE Tunnel	<input type="checkbox"/> Enable
Max. Concurrent GRE Tunnels	32

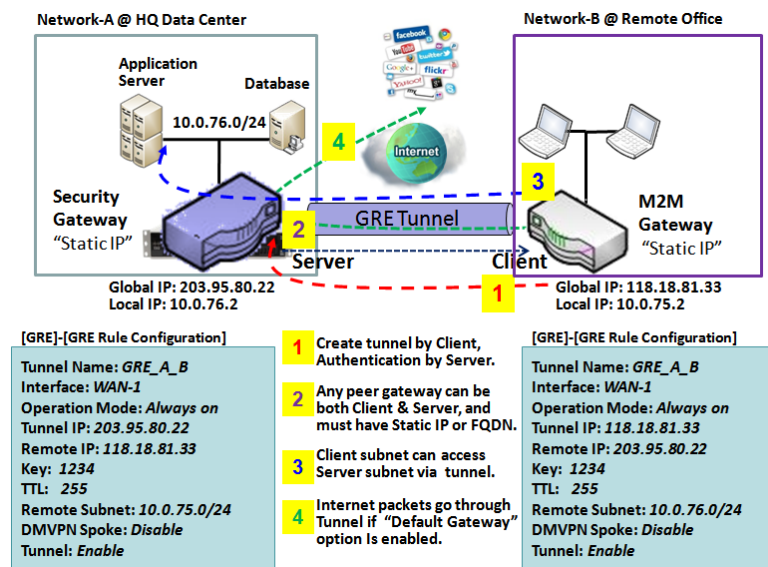

GRE Tunnel List [ Add ] [ Delete ]											
ID	Tunnel Name	Interface	Operation Mode	Tunnel IP	Remote IP	Key	TTL	Keep-alive	Remote Subnet	Enable	Actions

Generic Routing Encapsulation (GRE) is a tunneling protocol developed by Cisco Systems that encapsulates a wide variety of network layer protocols inside virtual point-to-point links over an Internet Protocol internetwork.

Deploy a M2M gateway for remote site and establish a virtual private network with control center by using GRE tunneling. So, all client hosts behind M2M gateway can make data communication with server hosts behind control center gateway.

GRE Tunneling is similar to IPSec Tunneling, client requesting the tunnel establishment with the server. Both the client and the server must have a Static IP or a FQDN. Any peer gateway can be worked as either a client or a server, even using the same set of configuration rule.

### GRE Tunnel Scenario

To setup a GRE tunnel, each peer needs to setup its global IP as tunnel IP and fill in the other's global IP as remote IP.

Besides, each peer must further specify the Remote Subnet item. It is for the Intranet of GRE server peer. So, at GRE client peer, the packets whose destination is in the dedicated subnet will be transferred via the GRE tunnel. Others will be transferred based on current routing policy of the gateway at GRE client peer. But, if you entered 0.0.0.0/0 in the Remote Subnet field, it will be treated as a "Default Gateway" setting for the GRE client peer, all packets, including the Internet accessing of GRE client peer, will go through the established GRE

tunnel. That means the remote GRE server peer controls the flow of any packets from the GRE client peer. Certainly, those packets come through the GRE tunnel.

# M2M Cellular Gateway

If the GRE server supports DMVPN Hub function, like Cisco router as the VPN concentrator, the GRE client can active the DMVPN spoke function here since it is implemented by GRE over IPsec tunneling.

## GRE Setting

Go to **Security > VPN > GRE** tab.

The GRE setting allows user to create and configure GRE tunnels.

### Enable GRE

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ GRE Tunnel	<input type="checkbox"/> Enable
▶ Max. Concurrent GRE Tunnels	<input type="text" value="32"/>

Enable GRE Window		
Item	Value setting	Description
<b>GRE Tunnel</b>	Unchecked by default	Click the <b>Enable</b> box to enable GRE function.
<b>Max. Concurrent GRE Tunnels</b>	Depends on Product specification.	The specified value will limit the maximum number of simultaneous GRE tunnel connection. The default value can be different for the purchased model.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings

# M2M Cellular Gateway

## 5.2 Firewall

The firewall functions include Packet Filter, URL Blocking, Content Filter, MAC Control, Application Filter, IPS and some firewall options. The supported function can be different for the purchased gateway.

### 5.2.1 Packet Filter

Configuration [ Help ]												
Item	Setting											
▶ Packet Filters	<input checked="" type="checkbox"/> Enable											
▶ Black List / White List	Deny those match the following rules. ▼											
▶ Log Alert	<input type="checkbox"/> Log Alert											
Packet Filter List <input type="button" value="Add"/> <input type="button" value="Delete"/>												
ID	Rule Name	From Interface	To Interface	Source IP	Destination IP	Source MAC	Protocol	Source Port	Destination Port	Time Schedule	Enable	Actions

# M2M Cellular Gateway

"Packet Filter" function can let you define some filtering rules for incoming and outgoing packets. So the gateway can control what packets are allowed or blocked to pass through it. A packet filter rule should indicate from and to which interface the packet enters and leaves the gateway, the source and destination IP addresses, and destination service port type and port number. In addition, the time schedule to which the rule will be active.

## Packet Filter with White List Scenario

As shown in the diagram, specify "Packet Filter Rule List" as white list (*Allow those match the following rules*) and define the rules. Rule-1 is to allow HTTP packets to pass, and Rule-2 is to allow HTTPS packets to pass.

Under such configuration, the gateway will allow only HTTP and HTTPS packets, issued from the IP range 192.168.123.200 to 250, which are targeted to TCP port 80 or 443 to pass the WAN interface.

## Packet Filter Setting

Go to **Security > Firewall > Packet Filter** Tab.

The packet filter setting allows user to create and customize packet filter policies to allow or reject specific inbound/outbound packets through the router based on their office setting.

## Enable Packet Filter

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Packet Filters	<input type="checkbox"/> Enable

## 5.2.2 URL Blocking (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 5.2.3 MAC Control

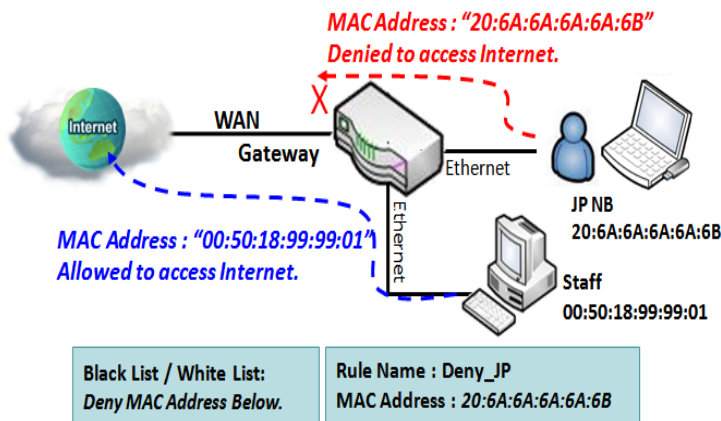

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ MAC Control	<input checked="" type="checkbox"/> Enable
▶ Black List / White List	Deny MAC Address Below. ▼
▶ Log Alert	<input type="checkbox"/> Enable
▶ Known MAC from LAN PC List	192.168.1.100(James-P45V) ▼ <input type="button" value="Copy to"/>

MAC Control Rule List <input type="button" value="Add"/> <input type="button" value="Delete"/>					
ID	Rule Name	MAC Address	Time Schedule Rule	Enable	Actions

"MAC Control" function allows you to assign the accessibility to the gateway for different users based on device's MAC address. When the administrator wants to reject the traffics from some client hosts with specific MAC addresses, he can use the "MAC Control" function to reject with the black list configuration.

### MAC Control with Black List Scenario

As shown in the diagram, enable the MAC control function and specify the "MAC Control Rule List" is a black list, and configure one MAC control rule for the gateway to deny the connection request from the "JP NB" with its own MAC address 20:6A:6A:6A:6A:6B.

System will block the connecting from the "JP NB" to the gateway but allow others.

# M2M Cellular Gateway

## MAC Control Setting

Go to **Security > Firewall > MAC Control** Tab.

The MAC control setting allows user to create and customize MAC address policies to allow or reject packets with specific source MAC address.

### Enable MAC Control

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ MAC Control	<input type="checkbox"/> Enable
▶ Black List / White List	Deny MAC Address Below. ▼
▶ Log Alert	<input type="checkbox"/> Enable
▶ Known MAC from LAN PC List	192.168.123.100(James-P45V) ▼ <input type="button" value="Copy to"/>

Configuration Window		
Item	Value setting	Description
<b>MAC Control</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the MAC filter function
<b>Black List / White List</b>	Deny MAC Address Below is set by default	When <b>Deny MAC Address Below</b> is selected, as the name suggest, packets specified in the rules will be blocked –black listed. In contrast, with <b>Allow MAC Address Below</b> , you can specifically white list the packets to pass and the rest will be blocked.
<b>Log Alert</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate to activate Event Log.
<b>Known MAC from LAN PC List</b>	N/A	Select a MAC Address from LAN Client List. Click the <b>Copy to</b> to copy the selected <b>MAC Address</b> to the filter rule.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

# M2M Cellular Gateway

## Create/Edit MAC Control Rules

The gateway supports up to a maximum of 20 filter rule sets. Ensure that the MAC Control is enabled before we can create control rules.

MAC Control Rule List <input type="button" value="Add"/> <input type="button" value="Delete"/>					
ID	Rule Name	MAC Address	Time Schedule Rule	Enable	Actions

When **Add** button is applied, **Filter Rule Configuration** screen will appear.

MAC Control Rule Configuration

## 5.2.6 IPS

Configuration [ Help ]	
Item	Setting
▶ IPS	<input type="checkbox"/> Enable
▶ Log Alert	<input type="checkbox"/> Enable

  

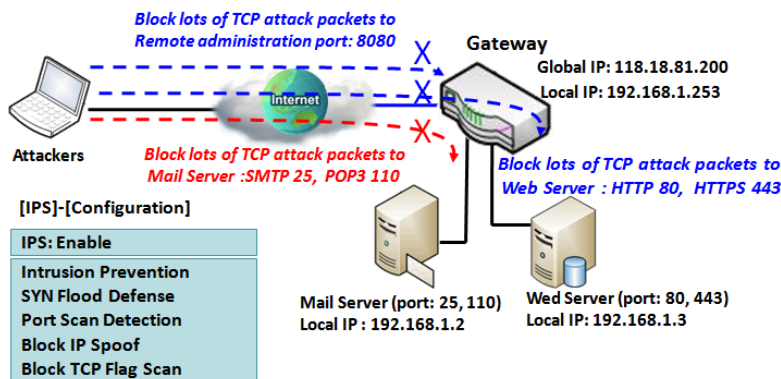

Intrusion Prevention	
Item	Setting
▶ SYN Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ UDP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ ICMP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ Port Scan Detection	<input type="checkbox"/> Enable <input type="text" value="200"/> Packets/second (10~10000)

To provide application servers in the Internet, administrator may need to open specific ports for the services. However, there are some risks to always open service ports in the Internet. In order to avoid such attack risks, it is important to enable IPS functions.

Intrusion Prevention System (IPS) is network security appliances that monitor network and/or system activities for malicious activity. The main functions of IPS are to identify malicious activity, log information about this activity, attempt to block/stop it and report it. You can enable the IPS function and check the listed intrusion activities when needed. You can also enable the log alerting so that system will record Intrusion events when corresponding intrusions are detected.

### IPS Scenario

As shown in the diagram, the gateway serves as an E-mail server, Web Server and also provides TCP port 8080 for remote administration. So, remote users or unknown users can request those services from Internet. With IPS enabled, the gateway can detect incoming attack packets, including the TCP ports (25, 80, 110, 443 and 8080) with services. It will block the attack packets and let the normal access to pass through the gateway

# M2M Cellular Gateway

## IPS Setting

Go to **Security > Firewall > IPS** Tab.

The Intrusion Prevention System (IPS) setting allows user to customize intrusion prevention rules to prevent malicious packets.

### Enable IPS Firewall

Configuration <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ IPS	<input type="checkbox"/> Enable
▶ Log Alert	<input type="checkbox"/> Enable

Configuration Window		
Item	Value setting	Description
<b>IPS</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate IPS function
<b>Log Alert</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate to activate Event Log.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

### Setup Intrusion Prevention Rules

The router allows you to select intrusion prevention rules you may want to enable. Ensure that the IPS is enabled before we can enable the defense function.

# M2M Cellular Gateway

Intrusion Prevention	
Item	Setting
▶ SYN Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ UDP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ ICMP Flood Defense	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)
▶ Port Scan Detection	<input type="checkbox"/> Enable <input type="text" value="200"/> Packets/second (10~10000)
▶ Block Land Attack	<input type="checkbox"/> Enable
▶ Block Ping of Death	<input type="checkbox"/> Enable
▶ Block IP Spoof	<input type="checkbox"/> Enable
▶ Block TCP Flag Scan	<input type="checkbox"/> Enable
▶ Block Smurf	<input type="checkbox"/> Enable
▶ Block Traceroute	<input type="checkbox"/> Enable
▶ Block Fraggle Attack	<input type="checkbox"/> Enable
▶ ARP Spoofing Defence	<input type="checkbox"/> Enable <input type="text" value="300"/> Packets/second (10~10000)

Setup Intrusion Prevention Rules		
Item Name	Value setting	Description
<b>SYN Flood Defense</b>	1. A Must filled setting	Click <b>Enable</b> box to activate this intrusion prevention rule and enter the traffic threshold in this field.
<b>UDP Flood Defense</b>	2. The box is unchecked by default.	Click <b>Enable</b> box to activate this intrusion prevention rule and enter the traffic threshold in this field.
<b>ICMP Flood Defense</b>	3. Traffic threshold is set to 300 by default 4. The value range can be from 10 to 10000.	Click <b>Enable</b> box to activate this intrusion prevention rule and enter the traffic threshold in this field. <b><u>Value Range: 10 ~ 10000.</u></b>
<b>Port Scan Defection</b>	1. A Must filled setting 2. The box is unchecked by default. 3. Traffic threshold is set to 200 by default 4. The value range can be from 10 to 10000.	Click <b>Enable</b> box to activate this intrusion prevention rule and enter the traffic threshold in this field. <b><u>Value Range: 10 ~ 10000.</u></b>
<b>Block Land Attack</b> <b>Block Ping of Death</b> <b>Block IP Spoof</b> <b>Block TCP Flag Scan</b> <b>Block Smurf</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this intrusion prevention rule.

# M2M Cellular Gateway

---

<b>Block Traceroute</b> <b>Block Fraggle Attack</b>		
<b>ARP Spoofing Defence</b>	<ol style="list-style-type: none"><li>1. A Must filled setting</li><li>2. The box is unchecked by default.</li><li>3. Traffic threshold is set to 300 by default</li><li>4. The value range can be from 10 to 10000.</li></ol>	Click <b>Enable</b> box to activate this intrusion prevention rule and enter the traffic threshold in this field. <b><i>Value Range: 10 ~ 10000.</i></b>
<b>Save</b>	NA	Click <b>Save</b> to save the settings
<b>Undo</b>	NA	Click <b>Undo</b> to cancel the settings

# M2M Cellular Gateway

## 5.2.7 Options

Firewall Options <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Stealth Mode	<input type="checkbox"/> Enable
▶ SPI	<input checked="" type="checkbox"/> Enable
▶ Discard Ping from WAN	<input type="checkbox"/> Enable

Remote Administrator Host Definition							
ID	Interface	Protocol	IP	Subnet Mask	Service Port	Enable	Action
1	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
2	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
3	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
4	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
5	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit

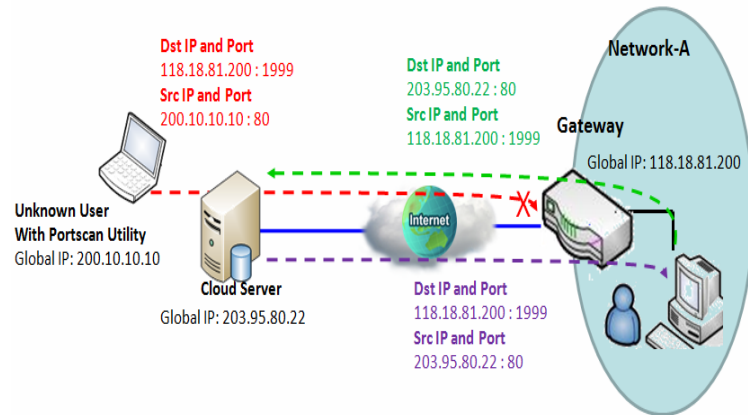

There are some additional useful firewall options in this page.

“Stealth Mode” lets gateway not to respond to port scans from the WAN so that makes it less susceptible to discovery and attacks on the Internet. “SPI” enables gateway to record the packet information like IP address, port address, ACK, SEQ number and so on while they pass through the gateway, and the gateway checks every incoming packet to detect if this packet is valid.

“Discard Ping from WAN” makes any host on the WAN side can’t ping this gateway. And finally, “Remote Administrator Hosts” enables you to perform administration task from a remote host. If this feature is enabled, only specified IP address(es) can perform remote administration.

# M2M Cellular Gateway

## Enable SPI Scenario

As shown in the diagram, Gateway has the IP address of 118.18.81.200 for WAN interface and 192.168.1.253 for LAN interface. It serves as a NAT gateway. Users in Network-A initiate to access cloud server through the gateway. Sometimes, unknown users will simulate the packets but use different source IP to masquerade. With the SPI feature been enabled at the gateway, it will block such packets from unknown users.

## Discard Ping from WAN & Remote Administrator Hosts Scenario

“Discard Ping from WAN” makes any host on the WAN side can’t ping this gateway reply any ICMP packets. Enable the Discard Ping from WAN function to prevent security leak when local users surf the internet.

Remote administrator knows the gateway’s global IP, and he can access the Gateway GUI via TCP port 8080.

## Firewall Options Setting

Go to **Security > Firewall > Options** Tab.

The firewall options setting allows network administrator to modify the behavior of the firewall and to enable Remote Router Access Control.

## Enable Firewall Options

# M2M Cellular Gateway

Firewall Options <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Stealth Mode	<input type="checkbox"/> Enable
▶ SPI	<input checked="" type="checkbox"/> Enable
▶ Discard Ping from WAN	<input type="checkbox"/> Enable

Firewall Options		
Item	Value setting	Description
<b>Stealth Mode</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Stealth Mode function
<b>SPI</b>	The box is checked by default	Check the <b>Enable</b> box to activate the SPI function
<b>Discard Ping from WAN</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Discard Ping from WAN function

## Define Remote Administrator Host

The router allows network administrator to manage router remotely. The network administrator can assign specific IP address and service port to allow accessing the router.

Remote Administrator Host Definition							
ID	Interface	Protocol	IP	Subnet Mask	Service Port	Enable	Action
1	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
2	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
3	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
4	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit
5	All WAN	HTTP	Any IP	N/A	80	<input type="checkbox"/>	Edit

Remote Administrator Host Definition		
Item	Value setting	Description
<b>Protocol</b>	HTTP is set by default	Select <b>HTTP</b> or <b>HTTPS</b> method for router access.
<b>IP</b>	A Must filled setting	This field is to specify the remote host to assign access right for remote access. Select <b>Any IP</b> to allow any remote hosts Select <b>Specific IP</b> to allow the remote host coming from a specific subnet. An IP address entered in this field and a selected <b>Subnet Mask</b> to compose the subnet.

# M2M Cellular Gateway

---

<b>Service Port</b>	1. 80 for HTTP by default 2. 443 for HTTPS by default	This field is to specify a Service Port to HTTP or HTTPS connection. <b><u>Value Range: 1 ~ 65535.</u></b>
<b>Enabling the rule</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this rule.
<b>Save</b>	N/A	Click <b>Enable</b> box to activate this rule then save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

## Chapter 6 Administration

### 6.1 Configure & Manage

Configure & Manage refers to enterprise-wide administration of distributed systems including (and commonly in practice) computer systems. Centralized management has a time and effort trade-off that is related to the size of the company, the expertise of the IT staff, and the amount of technology being used. This device supports many system management protocols, such as Command Script, TR-069, SNMP, and Telnet with CLI. You can setup those configurations in the "Configure & Manage" section.

# M2M Cellular Gateway

## 6.1.1 Command Script

Command script configuration is the application that allows administrator to setup the pre-defined configuration in plain text style and apply configuration on startup.

Go to **Administration > Command Script > Configuration** Tab.

### Enable Command Script Configuration

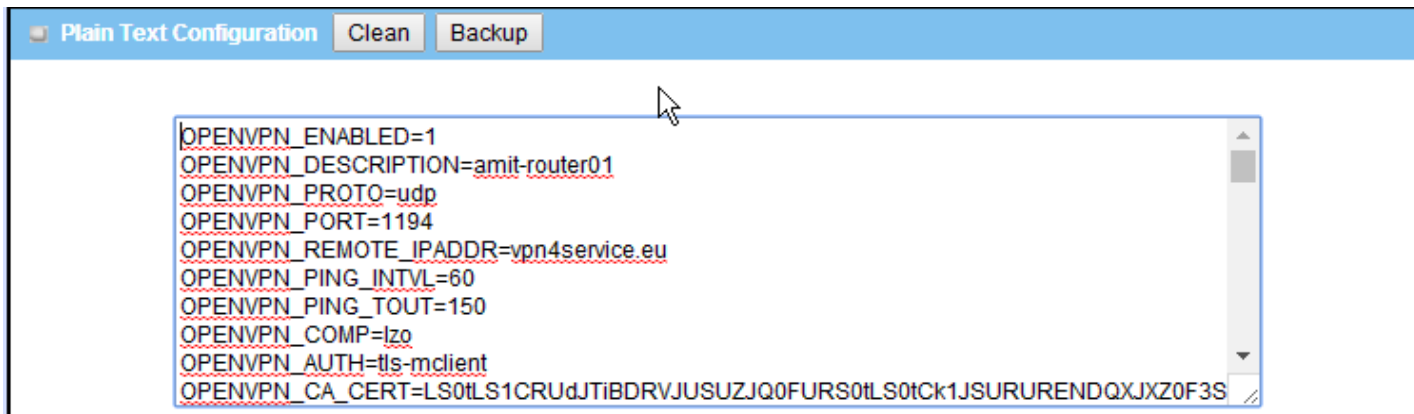

Configuration	
Item	Setting
▶ Configuration	<input type="checkbox"/> Enable
▶ Backup Script	<input type="button" value="Via Web UI"/>
▶ Upload Script	<input type="button" value="Via Web UI"/>
▶ Script Name	<input type="text"/>
▶ Version	<input type="text"/>
▶ Description	<div style="border: 1px solid #ccc; height: 60px; width: 100%;"></div>
▶ Update time	

Configuration Item	Value setting	Description
<b>Configuration</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Command Script function.
<b>Backup Script</b>	N/A	Click the <b>Via Web UI</b> or <b>Via Storage</b> button to backup the existed command script in a .txt file. You can specify the script file name in <b>Script Name</b> below.
<b>Upload Script</b>	N/A	Click the <b>Via Web UI</b> or <b>Via Storage</b> button to Upload the existed command script from a specified .txt file.
<b>Script Name</b>	1.An Optional setting 2.Any valid file name	Specify a script file name for script backup, or display the selected upload script file name. <b>Value Range:</b> 0 ~ 32 characters.
<b>Version</b>	1.An Optional setting 2.Any string	Specify the version number for the applied Command script. <b>Value Range:</b> 0 ~ 32 characters.
<b>Description</b>	1.An Optional setting 2.Any string	Enter a short description for the applied Command script.
<b>Update time</b>	N/A	It records the upload time for last commad script upload.

# M2M Cellular Gateway

## Edit/Backup Plain Text Command Script

You can edit the plain text configuration settings in the configuration screen as above.

Plain Text Configuration		
Item	Value setting	Description
Clean	NA	Clean text area. (You should click <b>Save</b> button to further clean the configuration already saved in the system.)
Backup	NA	Backup and download configuration.
Save	NA	Save configuration

The supported plain text configuration items are shown in the following list. For the settings that can be executed with standard Linux commands, you can put them in a script file, and apply to the system configure with **STARTUP** command. For those configurations without corresponding Linux command set to configure, you can configure them with proprietary command set.

Configuration Content		
Key	Value setting	Description
<b>OPENVPN_ENABLED</b>	1 : enable 0 : disable	Enable or disable OpenVPN Client function.
<b>OPENVPN_DESCRIPTION</b>	A Must filled Setting	Specify the tunnel name for the OpenVPN Client connection.
<b>OPENVPN_PROTO</b>	udp tcp	Define the <b>Protocol</b> for the OpenVPN Client. <ul style="list-style-type: none"><li>• Select <b>TCP</b> or <b>TCP /UDP</b> -&gt;The OpenVPN will use TCP protocol, and <b>Port</b> will be set as 443 automatically.</li><li>• Select <b>UDP</b> -&gt; The OpenVPN will use UDP protocol, and <b>Port</b> will be set as 1194 automatically.</li></ul>
<b>OPENVPN_PORT</b>	A Must filled Setting	Specify the <b>Port</b> for the OpenVPN Client to use.
<b>OPENVPN_REMOTE_IPADDR</b>	IP or FQDN	Specify the <b>Remote IP/FQDN</b> of the peer OpenVPN Server for this OpenVPN Client tunnel. Fill in the IP address or FQDN.
<b>OPENVPN_PING_INTVL</b>	seconds	Specify the time interval for OpenVPN keep-alive checking.
<b>OPENVPN_PING_TOUT</b>	seconds	Specify the timeout value for OpenVPN Client keep-alive checking.
<b>OPENVPN_COMP</b>	Adaptive	Specify the <b>LZO Compression</b> algorithm for OpenVPN client.
<b>OPENVPN_AUTH</b>	Static Key/TLS	Specify the authorization mode for the OpenVPN tunnel.

# M2M Cellular Gateway

		<ul style="list-style-type: none"> <li>• <b>TLS</b></li> </ul> ->The OpenVPN will use TLS authorization mode, and the following items <b>CA Cert.</b> , <b>Client Cert.</b> and <b>Client Key</b> need to specify as well.
<b>OPENVPN_CA_CERT</b>	A Must filled Setting	Specify the Trusted CA certificate for the OpenVPN client. It will go through Base64 Conversion.
<b>OPENVPN_LOCAL_CERT</b>	A Must filled Setting	Specify the local certificate for OpenVPN client. It will go through Base64 Conversion.
<b>OPENVPN_LOCAL_KEY</b>	A Must filled Setting	Specify the local key for the OpenVPN client. It will go through Base64 Conversion.
<b>OPENVPN_EXTRA_OPTS</b>	Options	Specify the extra options setting for the OpenVPN client.
<b>IP_ADDR1</b>	Ip	Ethernet LAN IP
<b>IP_NETM1</b>	Net mask	Ethernet LAN MASK
<b>PPP_MONITORING</b>	1 : enable 0 : disable	When the Network Monitoring feature is enabled, the router will use DNS Query or ICMP to periodically check Internet connection – connected or disconnected.
<b>PPP_PING</b>	0 : DNS Query 1 : ICMP Query	With <b>DNS Query</b> , the system checks the connection by sending DNS Query packets to the destination specified in PPP_PING_IPADDR. With <b>ICMP Query</b> , the system will check connection by sending ICMP request packets to the destination specified in PPP_PING_IPADDR.
<b>PPP_PING_IPADDR</b>	IP	Specify an IP address as the target for sending DNS query/ICMP request.
<b>PPP_PING_INTVL</b>	seconds	Specify the time interval for between two DNS Query or ICMP checking packets.
<b>STARTUP</b>	Script file	For the configurations that can be configured with standard Linux commands, you can put them in a script file, and apply the script file with STARTUP command. For example, STARTUP=#!/bin/sh STARTUP=echo "startup done" > /tmp/demo

## Plain Text System Configuration with Telnet

In addition to the web-style plain text configuration as mentioned above, the gateway system also allow the configuration via Telnet CLI. Administrator can use the proprietary telnet command "**txtConfig**" and related action items to perform the plain system configuration.

The command format is: `txtConfig (action) [option]`

Action	Option	Description
<b>clone</b>	<i>Output file</i>	Duplicate the configuration content from database and stored as a configuration file. (ex: <code>txtConfig clone /tmp/config</code> ) The contents in the configuration file are the same as the plain text commands mentioned above. This action is exactly the same as performing the "Backup" plain text configuration.
<b>commit</b>	a existing file	Commit the configuration content to database. (ex: <code>txtConfig commit /tmp/config</code> )
<b>enable</b>	NA	Enable plain text system config.

# M2M Cellular Gateway

---

		(ex: <i>txtConfig enable</i> )
<b>disable</b>	NA	Disable plain text system config. (ex: <i>txtConfig disable</i> )

<b>run_immediately</b>	a existing file	Assign a configuration file to apply. (ex: <i>txtConfig run_immediately /tmp/config</i> )

# M2M Cellular Gateway

## 6.1.2 TR-069

TR-069 (Technical Report 069) is a Broadband Forum technical specification entitled CPE WAN Management Protocol (CWMP). It defines an application layer protocol for remote management of end-user devices, like this gateway device. As a bidirectional SOAP/HTTP-based protocol, it provides the communication between customer-premises equipment (CPE) and Auto Configuration Servers (ACS). The Security Gateway is such CPE.

TR-069 is a customized feature for ISP. It is not recommend that you change the configuration for this. If you have any problem in using this feature for device management, please contact with your ISP or the ACS provider for help. At the right upper corner of TR-069 Setting screen, one “[Help]” command let you see the same message about that.

Scenario - Managing deployed gateways through an ACS Server

### Scenario Application Timing

When the enterprise data center wants to use an ACS server to manage remote gateways geographically distributed elsewhere in the world, the gateways in all branch offices must have an embedded TR-069 agent to communicate with the ACS server. So that the ACS server can configure, FW upgrade and monitor these gateways and their corresponding Intranets.

### Scenario Description

The ACS server can configure, upgrade with latest FW and monitor these gateways.

Remote gateways inquire the ACS server for jobs to do in each time period.

The ACS server can ask the gateways to execute some urgent jobs.

### Parameter Setup Example

# M2M Cellular Gateway

Following tables list the parameter configuration as an example for the Gateway 1 in above diagram with "TR-069" enabling.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[TR-069]-[Configuration]
TR-069	■ <i>Enable</i>
ACS URL	<a href="http://qa.acslite.com/cpe.php">http://qa.acslite.com/cpe.php</a>
ACS User Name	<i>ACSUserName</i>
ACS Password	<i>ACSPassword</i>
ConnectionRequest Port	<i>8099</i>
ConnectionRequest User Name	<i>ConnReqUserName</i>
ConnectionRequest Password	<i>ConnReqPassword</i>
Inform	■ <i>Enable Interval 900</i>

## Scenario Operation Procedure

In above diagram, the ACS server can manage multiple gateways in the Internet. The "Gateway 1" is one of them and has 118.18.81.33 IP address for its WAN-1 interface.

When all remote gateways have booted up, they will try to connect to the ACS server.

Once the connections are established successfully, the ACS server can configure, upgrade with latest FW and monitor these gateways.

Remote gateways inquire the ACS server for jobs to do in each time period.

If the ACS server needs some urgent jobs to be done by the gateways, it will issue the "Connection Request" command to those gateways. And those gateways make immediate connections in response to the ACS server's immediate connection request for executing the urgent jobs.

# M2M Cellular Gateway

## TR-069 Setting

Go to **Administration > Configure & Manage > TR-069** tab.

In "TR-069" page, there is only one configuration window for TR-069 function. In the window, you must specify the related information for your security gateway to connect to the ACS. Drive the function to work by specifying the URL of the ACS server, the account information to login the ACS server, the service port and the account information for connection requesting from the ACS server, and the time interval for job inquiry. Except the inquiry time, there are no activities between the ACS server and the gateways until the next inquiry cycle. But if the ACS server has new jobs that are expected to do by the gateways urgently, it will ask these gateways by using connection request related information for immediate connection for inquiring jobs and executing.

### Enable TR-069

Configuration <span style="float: right;">[ Help ]</span>

<b>Server Port</b>	1. An optional setting 2. <b>3478</b> is set by default	Specify the port number for the expected STUN Server.  <u>Value Range:</u> 1 ~ 65535.
<b>Keep Alive Period</b>	1. An optional setting 2. <b>0</b> is set by default	Specify the keep alive time period for the connection with STUN Server.  <u>Value Range:</u> 0 ~ 65535.
<b>Save</b>	N/A	Click <b>Save</b> to save the settings.
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the modifications.

# M2M Cellular Gateway

## 6.1.3 SNMP

In brief, SNMP, the Simple Network Management Protocol, is a protocol designed to give a user the capability to remotely manage a computer network by polling and setting terminal values and monitoring network events.

In typical SNMP uses, one or more administrative computers, called managers, have the task of monitoring or managing a group of hosts or devices on a computer network. Each managed system executes, at all times, a software component called an agent which reports information via SNMP to the manager.

SNMP agents expose management data on the managed systems as variables. The protocol also permits active management tasks, such as modifying and applying a new configuration through remote modification of these variables. The variables accessible via SNMP are organized in hierarchies. These hierarchies, and other metadata (such as type and description of the variable), are described by Management Information Bases (MIBs).

The device supports several public MIBs and one private MIB for the SNMP agent. The supported MIBs are as follow: MIB-II (RFC 1213, Include IPv6), IF-MIB, IP-MIB, TCP-MIB, UDP-MIB, SMIv1 and SMIv2, SNMPv2-TM and SNMPv2-MIB, and AMIB (a Proprietary MIB)

### SNMP Management Scenario

#### Scenario Application Timing

There are two application scenarios of SNMP Network Management Systems (NMS). Local NMS is in

## M2M Cellular Gateway

the Intranet and manage all devices that support SNMP protocol in the Intranet. Another one is the Remote NMS to manage some devices whose WAN interfaces are connected together by using a switch or a router with UDP forwarding. If you want to manage some devices and they all have supported SNMP protocol, use either one application scenario, especially the management of devices in the Intranet. In managing devices in the Internet, the TR-069 is the better solution. Please refer to last sub-section.

### Scenario Description

The NMS server can monitor and configure the managed devices by using SNMP protocol, and those devices are located at where UDP packets can reach from NMS.

The managed devices report urgent trap events to the NMS servers.

Use SNMPv3 version of protocol can protected the transmitting of SNMP commands and responses.

The remote NMS with privilege IP address can manage the devices, but other remote NMS can't.

### Parameter Setup Example

Following tables list the parameter configuration as an example for the Gateway 1 in above diagram with "SNMP" enabling at LAN and WAN interfaces.

Use default value for those parameters that are not mentioned in the tables.

Configuration Path	[SNMP]-[Configuration]
SNMP Enable	■ LAN ■ WAN
Supported Versions	■ v1 ■ v2c ■ v3
Get / Set Community	ReadCommunity / WriteCommunity
Trap Event Receiver 1	118.18.81.11
WAN Access IP Address	118.18.81.11

Configuration Path	[SNMP]-[User Privacy Definition]		
ID	1	2	3
User Name	UserName1	UserName2	UserName3
Password	Password1	Password2	Disable
Authentication	MD5	SHA-1	Disable
Encryption	DES	Disable	Disable
Privacy Mode	authPriv	authNoPriv	noAuthNoPriv
Privacy Key	12345678	Disable	Disable
Authority	Read/Write	Read	Read
Enable	■ Enable	■ Enable	■ Enable

### Scenario Operation Procedure

In above diagram, the NMS server can manage multiple devices in the Intranet or a UDP-reachable network. The "Gateway 1" is one of the managed devices, and it has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. It serves as a NAT router.

## M2M Cellular Gateway

---

At first stage, the NMS manager prepares related information for all managed devices and records them in the NMS system. Then NMS system gets the status of all managed devices by using SNMP get commands.

When the manager wants to configure the managed devices, the NMS system allows him to do that by using SNMP set commands. The "UserName1" account is used if the manager uses SNMPv3 protocol for configuring the "Gateway 1". Only the "UserName1" account can let the "Gateway 1" accept the configuration from the NMS since the authority of the account is "Read/Write".

Once a managed device has an urgent event to send, the device will issue a trap to the Trap Event Receivers. The NMS itself could be one among them.

If you want to secure the transmitted SNMP commands and responses between the NMS and the managed devices, use SNMPv3 version of protocol.

The remote NMS without privilege IP address can't manage the "Gateway 1", since "Gateway 1" allows only the NMS with privilege IP address can manage it via its WAN interface.

# M2M Cellular Gateway

## SNMP Setting

Go to **Administration > Configure & Manage > SNMP** tab.

The SNMP allows user to configure SNMP relevant setting which includes interface, version, access control and trap receiver.

### Enable SNMP

Configuration	
Item	Setting
▶ SNMP Enable	<input type="checkbox"/> LAN <input type="checkbox"/> WAN
▶ WAN Interface	All WANs ▼
▶ Supported Versions	<input type="checkbox"/> v1 <input type="checkbox"/> v2c <input type="checkbox"/> v3
▶ Remote Access IP	Specific IP Address ▼ <input type="text"/> (IP Address/FQDN)
▶ SNMP Port	161 <input type="text"/>

SNMP Item	Value setting	Description
<b>SNMP Enable</b>	1.The boxes are unchecked by default	Select the interface for the SNMP and enable SNMP functions. When Check the <b>LAN</b> box, it will activate SNMP functions and you can access SNMP from LAN side; When Check the <b>WAN</b> box, it will activate SNMP functions and you can access SNMP from WAN side.
<b>WAN Interface</b>	1.A Must filled setting 2. <b>ALL WANs is selected by default</b>	Specify the WAN interface that a remote SNMP host can access to the device. By default, <b>All WANs</b> is selected, and there is no limitation for the WAN interface.
<b>Supported Versions</b>	1.A Must filled setting 2.The boxes are unchecked by default	Select the version for the SNMP When Check the <b>v1</b> box. It means you can access SNMP by version 1. When Check the <b>v2c</b> box. It means you can access SNMP by version 2c. When Check the <b>v3</b> box. It means you can access SNMP by version 3.
<b>Remote Access IP</b>	1. String format: any IPv4 address 2. It is an optional item.	Specify the <b>Remote Access IP</b> for WAN. Select <b>Specific IP Address</b> , and fill in a certain IP address. It means only this IP address can access SNMP from LAN/WAN side. Select <b>IP Range</b> , and fill in a range of IP addresses. It means the IP address within specified range can access SNMP from LAN/WAN side.  If you left it as blank, it means any IP address can access SNMP from WAN side.

# M2M Cellular Gateway

<b>SNMP Port</b>	<ol style="list-style-type: none"> <li>String format: any port number</li> <li>The default SNMP port is <b>161</b>.</li> <li>A Must filled setting</li> </ol>	Specify the <b>SNMP Port</b> . You can fill in any port number. But you must ensure the port number is not to be used. <u>Value Range: 1 ~ 65535.</u>
<b>Save</b>	N/A	Click <b>Save</b> to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> to cancel the settings

## Create/Edit Multiple Community

The SNMP allows you to custom your access control for version 1 and version 2 user. The router supports up to a maximum of 10 community sets.

<input type="checkbox"/> Multiple Community List <input type="button" value="Add"/> <input type="button" value="Delete"/>			
ID	Community	Enable	Actions

When **Add** button is applied, **Multiple Community Rule Configuration** screen will appear.

<input type="checkbox"/> Multiple Community Rule Configuration

▶ Authority	Read ▾
▶ OID Filter Prefix	<input type="text" value="1"/>
▶ Enable	<input checked="" type="checkbox"/> Enable

User Privacy Rule Configuration		
Item	Value setting	Description
<b>User Name</b>	<ol style="list-style-type: none"> <li>A Must filled setting</li> <li>String format: any text</li> </ol>	Specify the <b>User Name</b> for this version 3 user. <b>Value Range:</b> 1 ~ 32 characters.
<b>Password</b>	<ol style="list-style-type: none"> <li>String format: any text</li> </ol>	When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b> , you must specify the <b>Password</b> for this version 3 user. <b>Value Range:</b> 8 ~ 64 characters.
<b>Authentication</b>	<ol style="list-style-type: none"> <li><b>None</b> is selected by default</li> </ol>	When your <b>Privacy Mode</b> is <b>authNoPriv</b> or <b>authPriv</b> , you must specify the <b>Authentication</b> types for this version 3 user. Selected the authentication types <b>MD5/ SHA-1</b> to use.
<b>Encryption</b>	<ol style="list-style-type: none"> <li><b>None</b> is selected by default</li> </ol>	When your <b>Privacy Mode</b> is <b>authPriv</b> , you must specify the <b>Encryption</b> protocols for this version 3 user. Selected the encryption protocols <b>DES / AES</b> to use.

# M2M Cellular Gateway

<b>Privacy Mode</b>	1. <b>noAuthNoPriv</b> is selected by default	Specify the <b>Privacy Mode</b> for this version 3 user. Selected the <b>noAuthNoPriv</b> . You do not use any authentication types and encryption protocols. Selected the <b>authNoPriv</b> . You must specify the <b>Authentication</b> and <b>Password</b> . Selected the <b>authPriv</b> . You must specify the Authentication, Password, Encryption and Privacy Key.
<b>Privacy Key</b>	1. String format: any text	When your <b>Privacy Mode</b> is <b>authPriv</b> , you must specify the <b>Privacy Key (8 ~ 64 characters)</b> for this version 3 user.
<b>Authority</b>	1. <b>Read</b> is selected by default	Specify this version 3 user's <b>Authority</b> that will be allowed <b>Read Only</b> (GET and GETNEXT) or <b>Read-Write</b> (GET, GETNEXT and SET) access respectively.
<b>OID Filter Prefix</b>	1. The default value is 1 2. A Must filled setting 3. String format: any legal OID	The <b>OID Filter Prefix</b> restricts access for this version 3 user to the sub-tree rooted at the given OID. <b>Value Range: 1 ~2080768.</b>
<b>Enable</b>	1.The box is checked by default	Click <b>Enable</b> to enable this version 3 user.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration. But it does not apply to SNMP functions. When you return to the SNMP main page. It will show "Click on save button to apply your changes" remind user to click main page <b>Save</b> button.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings
<b>Back</b>	N/A	Click the <b>Back</b> button to return the last page.

## Create/Edit Trap Event Receiver

The SNMP allows you to custom your trap event receiver. The router supports up to a maximum of 4 Trap Event Receiver sets.

Trap Event Receiver List												
ID	Server IP	Server Port	SNMP Version	Community Name	User Name	Password	Privacy Mode	Authentication	Encryption	Privacy Key	Enable	Actions

When **Add** button is applied, **Trap Event Receiver Rule Configuration** screen will appear. The default SNMP Version is v1. The configuration screen will provide the version 1 must filled items.

# M2M Cellular Gateway

Trap Event Receiver Rule Configuration	
Item	Setting
▶ Server IP	<input type="text"/> (IP Address/FQDN)
▶ Server Port	<input type="text" value="162"/>
▶ SNMP Version	v1 ▼
▶ Community Name	<input type="text"/>
▶ Enable	<input checked="" type="checkbox"/> Enable

When you selected v2c, the configuration screen is exactly the same as that of v1, except the version.

When you selected v3, the configuration screen will provide more setting items for the version 3 Trap.

## Specify SNMP MIB-2 System

If required, you can also specify the required information for the MIB-2 System.

SNMP MIB-2 System	
Item	Setting
▶ sysContact	<input type="text"/>
▶ sysLocation	<input type="text"/>

SNMP MIB-2 System Configuration		
Item	Value setting	Description
<b>sysContact</b>	1. An Optional filled setting 2. String format: any text	Specify the contact information for MIB-2 system. <b><i>Value Range: 0 ~ 64 characters.</i></b>
<b>sysLocation</b>	1. An Optional filled setting 2. String format: any text	Specify the location information for MIB-2 system. <b><i>Value Range: 0 ~ 64 characters.</i></b>

## Edit SNMP Options

If you use some particular private MIB, you must fill the enterprise name, number and OID.

Options	
Item	Setting
▶ Enterprise Name	<input type="text" value="AMIT"/>
▶ Enterprise Number	<input type="text" value="12823"/>
▶ Enterprise OID	1.3.6.1.4.1. <input type="text" value="12823.4.4.9"/>

Options	
Item	Setting
▶ Enterprise Name	<input type="text" value="Default"/>
▶ Enterprise Number	<input type="text" value="12823"/>
▶ Enterprise OID	1.3.6.1.4.1. <input type="text" value="12823.4.4.9"/>

### Options

# M2M Cellular Gateway

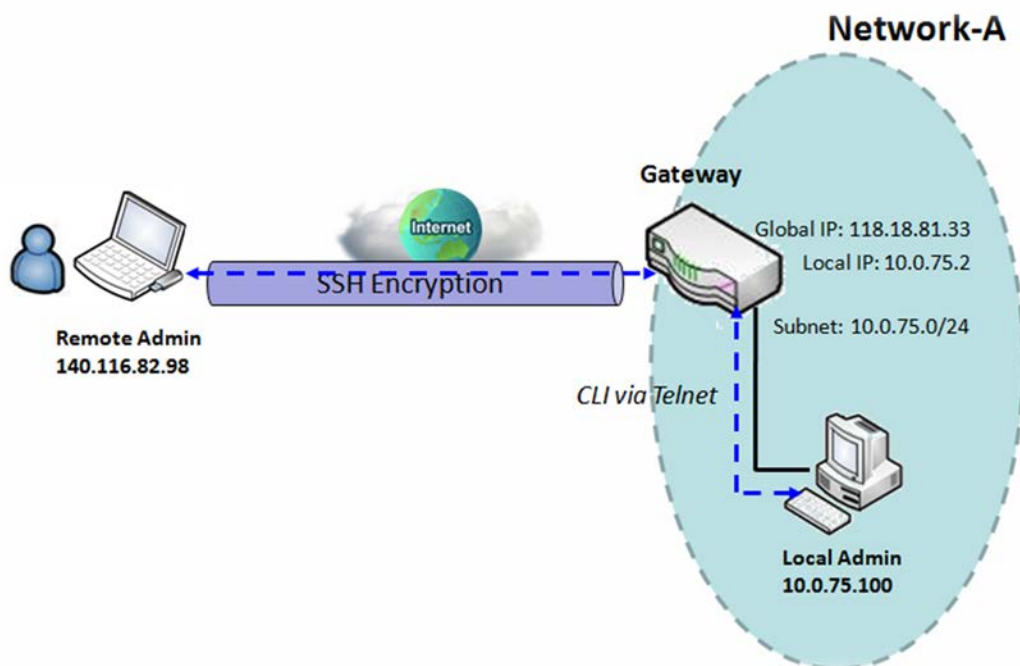

Item	Value setting	Description
<b>Enterprise Name</b>	1. The default value is <b>Default</b> 2. A Must filled setting 3. String format: any text	Specify the <b>Enterprise Name</b> for the particular private MIB. <b>Value Range:</b> 1 ~ 10 characters, and only string with A~Z, a~z, 0~9, '-', '_'.
<b>Enterprise Number</b>	The default value is 12823 (Default Enterprise Number) 2. A Must filled setting 3. String format: any number	Specify the <b>Enterprise Number</b> for the particular private MIB. <b>Value Range:</b> 1 ~2080768.
<b>Enterprise OID</b>	1. The default value is 1.3.6.1.4.1. <b>12823.4.4.9</b> (Default Enterprise OID) 2. A Must filled setting 3. String format: any legal OID	Specify the <b>Enterprise OID</b> for the particular private MIB. The range of the each OID number is 1-2080768. The maximum length of the enterprise OID is 31. The seventh number must be identical with the enterprise number.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration and apply your changes to SNMP functions.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to cancel the settings.

# M2M Cellular Gateway

## 6.1.4 Telnet & SSH

A command-line interface (CLI), also known as command-line user interface, and console user interface are means of interacting with a computer program where the user (or client) issues commands to the program in the form of successive lines of text (command lines). The interface is usually implemented with a command line shell, which is a program that accepts commands as text input and converts commands to appropriate operating system functions. Programs with command-line interfaces are generally easier to automate via scripting. The device supports both Telnet and SSH (Secure Shell) CLI with default service port 23 and 22, respectively.

### Telnet & SSH Scenario

#### Scenario Application Timing

When the administrator of the gateway wants to manage it from remote site in the Intranet or Internet, he may use "Telnet with CLI" function to do that by using "Telnet" or "SSH" utility.

#### Scenario Description

The Local Admin or the Remote Admin can manage the Gateway by using "Telnet" or "SSH" utility with privileged user name and password.

The data packets between the Local Admin and the Gateway or between the Remote Admin and the Gateway can be plain texts or encrypted texts. Suggest they are plain texts in the Intranet for Local Admin to use "Telnet" utility, and encrypted texts in the Internet for Remote Admin to use "SSH" utility.

# M2M Cellular Gateway

---

## Parameter Setup Example

Following table lists the parameter configuration as an example for the Gateway in above diagram with "Telnet with CLI" enabling at LAN and WAN interfaces.

Use default value for those parameters that are not mentioned in the table.

Configuration Path	[Telnet & SSH]-[Configuration]
Telnet	LAN: <input checked="" type="checkbox"/> <i>Enable</i> WAN: <input type="checkbox"/> <i>Enable</i> Service Port: <b>23</b>

## Scenario Operation Procedure

In above diagram, "Local Admin" or "Remote Admin" can manage the "Gateway" in the Intranet or Internet. The "Gateway" is the gateway of Network-A, and the subnet of its Intranet is 10.0.75.0/24. It has the IP address of 10.0.75.2 for LAN interface and 118.18.81.33 for WAN-1 interface. It serves as a NAT gateway.

The "Local Admin" in the Intranet uses "Telnet" utility with privileged account to login the Gateway.

Or the "Remote Admin" in the Internet uses "SSH" utility with privileged account to login the Gateway.

The administrator of the gateway can control the device as like he is in front of the gateway.

# M2M Cellular Gateway

## Telnet & SSH Setting

Go to **Administration > Configure & Manage > Telnet & SSH** tab.

The Telnet & SSH setting allows administrator to access this device through the traditional Telnet or SSH Telnet program. Before you can telnet (login) to the device, please configure the related settings and password with care. The password management part allows you to set root password for logging telnet and SSH.

Configuration <span>Save</span> <span>Undo</span>	
Item	Setting
▶ Telnet	LAN <input checked="" type="checkbox"/> Enable WAN <input type="checkbox"/> Enable Service Port <input type="text" value="23"/>
▶ SSH	LAN <input checked="" type="checkbox"/> Enable WAN <input type="checkbox"/> Enable Service Port <input type="text" value="22"/>

## 6.2 System Operation

System Operation allows the network administrator to manage system, settings such as web-based utility access password change, system information, system time, system log, firmware/configuration backup & restore, and reset & reboot.

### 6.2.1 Password & MMI

Go to **Administration > System Operation > Password & MMI** tab.

#### Change UserName

Change Username screen allows network administrator to change the web-based MMI login account to access gateway. Click the **Modify** button and provide the new username setting.

Username <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Username	admin <input type="button" value="Modify"/>
▶ New UserName	<input type="text"/>
▶ Password	<input type="text"/>

Username Configuration		
Item	Value setting	Description
<b>Username</b>	1. The default Username for web-based MMI is 'admin'.	Display the current MMI login account (Username).
<b>New Username</b>	String: any text	Enter new Username to replace the current setting.
<b>Password</b>	String: any text	Enter current password to verify if you have the permission to change the username setting.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings

#### Change Password

Change password screen allows network administrator to change the web-based MMI login password to access gateway.

# M2M Cellular Gateway

Password <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Old Password	<input type="text"/>
▶ New Password	<input type="text"/>
▶ New Password Confirmation	<input type="text"/>

Password Configuration		
Item	Value setting	Description
<b>Old Password</b>	1. String: any text 2. <b>The default password for web-based MMI is 'admin'.</b>	Enter the current password to enable you unlock to change password.
<b>New Password</b>	String: any text	Enter new password
<b>New Password Confirmation</b>	String: any text	Enter new password again to confirm
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings

## Change MMI Setting for Accessing

This is the gateway's web-based MMI access which allows administrator to access the gateway for management. The gateway's web-based MMI will automatically logout when the idle time has elapsed. The setting allows administrator to enable automatic logout and set the logout idle time. When the login timeout is disabled, the system won't logout the administrator automatically.

MMI <span style="float: right;">[ Help ]</span>	
Item	Setting
▶ Login	Password-Guessing Attack & MAX: <input type="text" value="3"/> (times)
▶ Login Timeout	<input checked="" type="checkbox"/> Enable <input type="text" value="300"/> (seconds)
▶ GUI Access Protocol	<input type="text" value="http/https"/> ▼
▶ HTTPs Certificate Setup	<input checked="" type="radio"/> default <input type="radio"/> Select from Certificate List Certificate: <input type="text"/> ▼ Key: <input type="text" value="locatkey"/> ▼
▶ HTTP Compression	<input type="checkbox"/> gzip <input type="checkbox"/> deflate
▶ System Boot Mode	<input type="text" value="Normal Mode"/> ▼

# M2M Cellular Gateway

MMI Configuration		
Item	Value setting	Description
<b>Login</b>	3 times is set by default	Enter the login trial counting value. <b>Value Range: 3 ~ 10.</b> If someone tried to login the web GUI with incorrect password for more than the counting value, an warning message " <b>Already reaching maximum Password-Guessing times, please wait a few seconds!</b> " will be displayed and ignore the following login trials.
<b>Login Timeout</b>	The Enable box is checked, and 300 is set by default.	Check the Enable box to activate the auto logout function, and specify the maximum idle time as well. <b>Value Range: 30 ~ 65535.</b>
<b>GUI Access Protocol</b>	<b>http/https</b> is selected by default.	Select the protocol that will be used for GUI access. It can be <b>http/https</b> , <b>http only</b> , or <b>https only</b> .
<b>HTTPs Certificate Setup</b>	The <b>default</b> box is selected by default	If the https Access Protocol is selected, the HTTPs Certificate Setup option will be available for further configuration. You can leave it as default or select a expected certificate and key from the drop down list. Refer to <b>Object Definition &gt; Certificate</b> Section for the Certificate configuration.
<b>http Compression</b>	The box is unchecked by default.	Check the box ( <b>gzip</b> , or <b>deflate</b> ) if any comprerssion method is preferred.
<b>System Boot Mode</b>	<b>Normal Mode</b> is selected by default.	Select the system boot mode that will be adopted to boot up the device. <b>Normal Mode:</b> It takes longer boot up time, about 200 seconds, with complete firmware image check during the device booting. <b>Fast Mode:</b> It takes shorter boot up time, about 120 seconds, without checking the firmwareimage during the device booting. <b>Quick Mode:</b> It takes shorter boot up time, about 90 seconds, without checking the firmware image and create the internal database for User/Group/Captive Portal functions.  <b>Note:</b> Use <b>Quick Mode</b> with care, once selected, the User/Group/Captive Portal function will become non-functional.
<b>Save</b>	N/A	Click <b>Save</b> button to save the settings
<b>Undo</b>	N/A	Click <b>Undo</b> button to cancel the settings

# M2M Cellular Gateway

## 6.2.2 System Information

System Information screen gives network administrator a quick look up on the device information for the purchased gateway.

Go to **Administration > System Operation > System Information** tab.

System Information	
Item	Setting
▶ Model Name	
▶ Device Serial Number	
▶ Kernel Version	2.6.36
▶ FW Version	0000TE0.H81_e81.0000_08021800
▶ CPU Usage	9.80%
▶ Memory Usage	60%
▶ System Time	Mon, 07 Aug 2017 15:45:25 +0800
▶ Device Up-Time	4day 3hr 22min 24sec

System Information		
Item	Value Setting	Description
<b>Model Name</b>	N/A	It displays the model name of this product.
<b>Device Serial Number</b>	N/A	It displays the serial number of this product.
<b>Kernel Version</b>	N/A	It displays the Linux kernel version of the product
<b>FW Version</b>	N/A	It displays the firmware version of the product
<b>CPU Usage</b>	N/A	It displays the percentage of CPU utilization.
<b>Memory Usage</b>	N/A	It displays the percentage of device memory utilization.
<b>System Time</b>	N/A	It displays the current system time that you browsed this web page.
<b>Device Up-Time</b>	N/A	It displays the statistics for the device up-time since last boot up.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system Information immediately.

# M2M Cellular Gateway

## 6.2.3 System Time

The gateway provides manually setup and auto-synchronized approaches for the administrator to setup the system time for the gateway. The time supported synchronization methods can be Time Server, Manual, PC, Cellular Module, or GPS Signal. Select the method first, and then configure rest settings.

Instead of manually configuring the system time for the gateway, there are two simple and quick solutions for you to set the correct time information and set it as the system time for the gateway.

The first one is “Sync with Timer Server”. Based on your selection of time zone and time server in above time information configuration window, system will communicate with time server by NTP Protocol to get system date and time after you click on the **Synchronize immediately** button.

The second one is “Sync with my PC”. Select the method and the system will synchronize its date and time to the time of the administration PC.

Go to **Administration > System Operation > System Time** tab.

### Synchronize with Time Server

System Time Configuration	
Item	Setting
▶ Synchronization method	Time Server ▼
▶ Time Zone	(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▼
▶ Auto-synchronization	Time Server: <input type="text"/> Available Time Servers (RFC-868): Auto ▼
▶ Daylight Saving Time	<input type="checkbox"/> Enable
▶ NTP Service	<input type="checkbox"/> Enable
▶ Synchronize immediately	Active

System Time Information		
Item	Value Setting	Description
<b>Synchronization method</b>	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select the <b>Time Server</b> as the synchronization method for the system time.
<b>Time Zone</b>	1. A Must-filled item. 2. <b>GMT+00 :00</b> is selected by default.	Select a time zone where this device locates.
<b>Auto-synchronization</b>	1. A Must-filled item. 2. Auto is selected by default.	Enter the IP or FQDN for the NTP time server you expected, or leave it as auto mode so that the available server will be used for time synchronization one by one.

# M2M Cellular Gateway

<b>Daylight Saving Time</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the daylight saving function. When you enabled this function, you have to specify the start date and end date for the daylight saving time duration.
<b>NTP Service</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
<b>Synchronize immediately</b>	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system time immediately.

Note: Remember to select a correct time zone for the device, otherwise, you will just get the UTC (Coordinated Universal Time) time, not the local time for the device.

## Synchronize with Manually Setting

System Time Configuration	
Item	Setting
▶ Synchronization method	Manual ▾
▶ Time Zone	(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▾
▶ Daylight Saving Time	<input type="checkbox"/> Enable
▶ Set Date & Time Manually	2018 ▾ / January ▾ / 09 ▾ (Year/Month/Day)
	15 ▾ : 37 ▾ : 58 ▾ (Hour:Minute:Second)
▶ NTP Service	<input type="checkbox"/> Enable

System Time Information		
Item	Value Setting	Description
<b>Synchronization method</b>	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select the <b>Manual</b> as the synchronization method for the system time. It means administrator has to set the Date & Time manually.
<b>Time Zone</b>	1. A Must-filled item. 2. <b>GMT+00 :00</b> is selected by default.	Select a time zone where this device locates.
<b>Daylight Saving Time</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the daylight saving function. When you enabled this function, you have to specify the start date and end date for the daylight saving time duration.
<b>Set Date &amp; Time Manually</b>	1. It is an optional item.	Manually set the date (Year/Month/Day) and time (Hour:Minute:Second) as the system time.
<b>NTP Service</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for

# M2M Cellular Gateway

---

		its local connected devices.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.

# M2M Cellular Gateway

## Synchronize with PC

System Time Configuration	
Item	Setting
▶ Synchronization method	PC ▾
▶ NTP Service	<input type="checkbox"/> Enable
▶ Synchronize immediately	<input type="button" value="Active"/>

System Time Information		
Item	Value Setting	Description
<b>Synchronization method</b>	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select <b>PC</b> as the synchronization method for the system time to let system synchronize its date and time to the time of the administration PC.
<b>NTP Service</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
<b>Synchronize immediately</b>	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system time immediately.

# M2M Cellular Gateway

## Synchronize with Cellular Time Service

System Time Configuration	
Item	Setting
▶ Synchronization method	Cellular Module ▾
▶ Time Zone	(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▾
▶ NTP Service	<input type="checkbox"/> Enable
▶ Synchronize immediately	Active

System Time Information		
Item	Value Setting	Description
<b>Synchronization method</b>	<ol style="list-style-type: none"><li>1. A Must-filled item.</li><li>2. <b>Time Server</b> is selected by default.</li></ol>	Select <b>Cellular Module</b> as the synchronization method for the system time to let system synchronize its date and time to the time provided from the connected mobile ISP. Note: this option is only available for the product with Cellular WAN interface.
<b>Time Zone</b>	<ol style="list-style-type: none"><li>1. A Must-filled item.</li><li>2. <b>GMT+00 :00</b> is selected by default.</li></ol>	Select a time zone where this device locates.
<b>NTP Service</b>	<ol style="list-style-type: none"><li>1. It is an optional item.</li><li>2. Un-checked by default</li></ol>	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
<b>Synchronize immediately</b>	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system time immediately.

# M2M Cellular Gateway

## Synchronize with GPS Time Service

System Time Configuration	
Item	Setting
▶ Synchronization method	GPS Signal ▼
▶ Time Zone	(GMT+00:00) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London ▼
▶ NTP Service	<input type="checkbox"/> Enable
▶ Synchronize immediately	Active

System Time Information		
Item	Value Setting	Description
<b>Synchronization method</b>	1. A Must-filled item. 2. <b>Time Server</b> is selected by default.	Select <b>GPS Signal</b> as the synchronization method for the system time to let system synchronize its date and time to the time provided from the GNSS service. Note: this option is only available for the product with GNSS interface.
<b>Time Zone</b>	1. A Must-filled item. 2. <b>GMT+00 :00</b> is selected by default.	Select a time zone where this device locates.
<b>NTP Service</b>	1. It is an optional item. 2. Un-checked by default	Check the <b>Enable</b> button to activate the NTP Service function. When you enabled this function, the gateway can provide NTP server service for its local connected devices.
<b>Synchronize immediately</b>	N/A	Click the <b>Active</b> button to synchronize the system time with specified time server immediately.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the system time immediately.

# M2M Cellular Gateway

## 6.2.4 System Log

System Log screen contains various event log tools facilitating network administrator to perform local event logging and remote reporting.

Go to **Administration > System Operation > System Log** tab.

Item	Setting

## 6.2.5 Backup & Restore

In the Backup & Restore window, you can upgrade the device firmware when new firmware is available and also backup / restore the device configuration.

In addition to the factory default settings, you can also customize a special configuration setting as a customized default value. With this customized default value, you can reset the device to the expected default setting if needed.

Go to **Administration > System Operation > Backup & Restore** tab.

FW Backup & Restore	
Item	Setting
▶ FW Upgrade	Via Web UI ▼ FW Upgrade
▶ Backup Configuration Settings	Download ▼ Via Web UI
▶ Auto Restore Configuration	<input type="checkbox"/> Enable Save Conf. Clean Conf. Conf. Info.
▶ Self-defined Logo	Download ▼ Via Web UI

FW Backup & Restore		
Item	Value Setting	Description
<b>FW Upgrade</b>	Via Web UI is selected by default	If new firmware is available, click the <b>FW Upgrade</b> button to upgrade the device firmware <b>via Web UI</b> , or <b>Via Storage</b> . After clicking on the “FW Upgrade” command button, you need to specify the file name of new firmware by using “Browse” button, and then click “Upgrade” button to start the FW upgrading process on this device. If you want to upgrade a firmware which is from GPL policy, please check “Accept unofficial firmware”
<b>Backup Configuration Settings</b>	Download is selected by default	You can backup or restore the device configuration settings by clicking the <b>Via Web UI</b> button. <b>Download:</b> for backup the device configuration to a config.bin file. <b>Upload:</b> for restore a designated configuration file to the device. <b>Via Web UI:</b> to retrieve the configuration file via Web GUI.
<b>Auto Restore Configuration</b>	The Enable box is unchecked by default	Click the <b>Enable</b> button to activate the customized default setting function. Once the function is activated, you can save the expected setting as a customized default setting by clicking the <b>Save Conf.</b> button, or clicking the <b>Clean Conf.</b> button to erase the stored customized configuration.

# M2M Cellular Gateway

## 6.2.6 Reboot & Reset

For some special reason or situation, you may need to reboot the gateway or reset the device configuration to its default value. In addition to perform these operations through the Power ON/OFF, or pressing the reset button on the device panel, you can do it through the web GUI too.

Go to **Administration > System Operation > Reboot & Reset** tab.

In the Reboot & Reset window, you can reboot this device by clicking the “Reboot” button, and reset this device to default settings by clicking the “Reset” button.

System Operation	
Item	Setting
▶ Reboot	Now ▼ <input type="button" value="Reboot"/>
▶ Reset to Default	<input type="button" value="Reset"/>

System Operation Window		
Item	Value Setting	Description
<b>Reboot</b>	Now is selected by default	Click the <b>Reboot</b> button to reboot the gateway immediately or on a pre-defined time schedule. <b>Now:</b> Reboot immediately <b>Time Schedule:</b> Select a pre-defined auto-reboot time schedule rule to reboot the auto device on a designated tim. To define a time schedule rule, go to <b>Object Definition &gt; Scheduling &gt; Configuration</b> tab.
<b>Reset to Default</b>	N/A	Click the <b>Reset</b> button to reset the device configuration to its default value.

# M2M Cellular Gateway

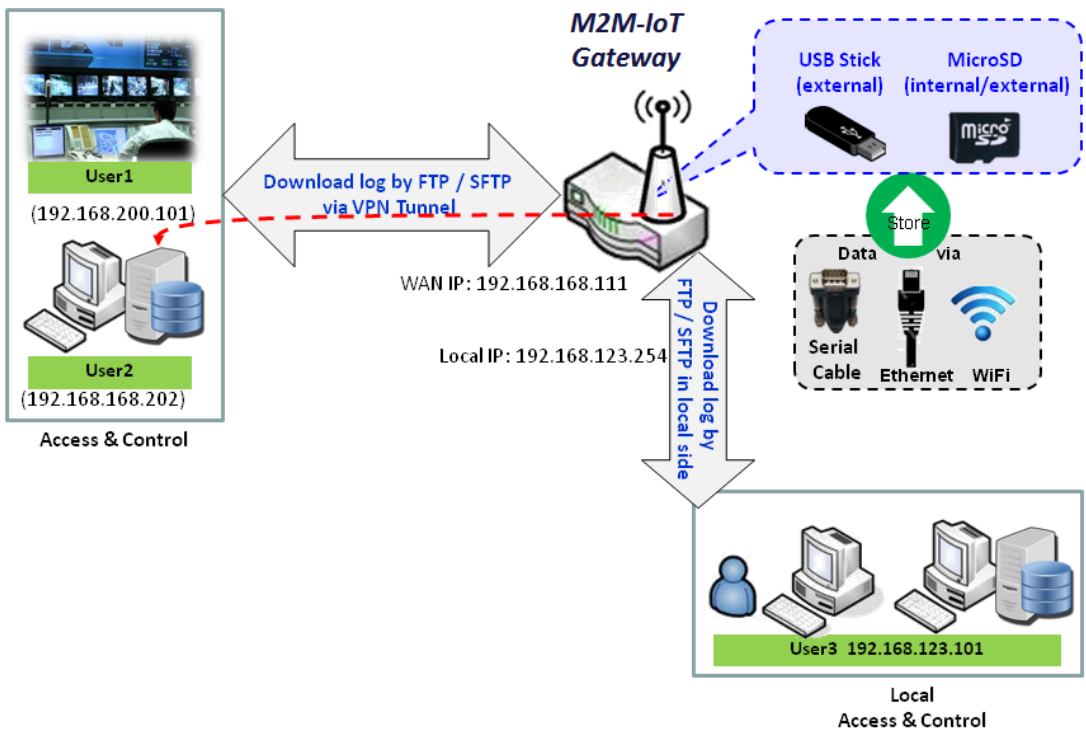

## 6.3 FTP

The File Transfer Protocol (FTP) is a standard network protocol used to transfer computer files between a client and server on a computer network. FTP is built on a client-server model architecture and uses separate control and data connections between the client and the server. FTP users may authenticate themselves with a clear-text sign-in protocol, normally in the form of a username and password, but can connect anonymously if the server is configured to allow it.

For secure transmission that protects the username and password, and encrypts the content, FTP is often secured with SSL/TLS (FTPS). Besides, SSH File Transfer Protocol (SFTP) is sometimes also used instead, but is technologically different.

This gateway embedded FTP / SFTP server for administrator to download the log files to his computer or database. In the following two sections, you can configure the FTP server and create the user accounts that can login to the server. After login to the FTP server, you can browse the log directory and have the permission to download the stored log files and delete the files you have downloaded to make more storage space for further data logs.

The available log files can be system logs (refer to Administration > System Operation > System Log), Network Packets (refer to Administrator > Diagnostic > Packet Analyzer), Data Log (refer to Field Communication > Data Logging > Log File Management), and GNSS Log (refer to Service > Location Tracking > GNSS). With proper configuration for the various log functions that supported on your purchased product, you can download the log via FTP / SFTP connections.

# M2M Cellular Gateway

## 6.3.1 Server Configuration

This section allows user to setup the embedded FTP and SFTP server for retrieving the interested fog files.

Go to Administration > FTP > Server Configuration tab.

### Enable FTP Server

FTP Server Configuration <span>Save</span>	
Item	Setting
▶ FTP	<input type="checkbox"/> Enable
▶ FTP Port	<input type="text" value="21"/>
▶ Timeout	<input type="text" value="300"/> second(s)(60-7200)
▶ Max. Connections per IP	<input type="text" value="2"/> ▼
▶ Max. FTP Clients	<input type="text" value="5"/> ▼
▶ PASV Mode	<input type="checkbox"/> Enable
▶ Port Range of PASV Mode	<input type="text" value="50000"/> ~ <input type="text" value="50031"/>
▶ Auto Report External IP in PASV Mode	<input type="checkbox"/> Enable
▶ ASCII Transfer Mode	<input type="checkbox"/> Enable
▶ FTPS(FTP over SSL/TLS)	<input type="checkbox"/> Enable

Configuration		
Item	Value setting	Description
<b>FTP</b>	The box is unchecked by default.	Check <b>Enable</b> box to activate the embedded FTP Server function. With the FTP Server enabled, you can retrieve or delete the stored log files via FTP connection. Note: The embedded FTP Server is only for log downloading, so no any write permission is implemented for user file upload to the storage.
<b>FTP Port</b>	Port <b>21</b> is set by default	Specify a port number for FTP connection. The gateway will listen for incoming FTP connections on the specified port. <b>Value Range: 1 ~ 65535.</b>
<b>Timeout</b>	<b>300</b> seconds is set by default.	Specify the maximum timeout interval for the FTP connection. Supported range is 60 to 7200 seconds.
<b>Max. Connections per IP</b>	<b>2</b> Clients are set by default.	Specify the maximum number of clients from the same IP address for the FTP connection. Up to 5 clients from the same IP address is supported.
<b>Max. FTP Clients</b>	<b>5</b> Clients are set by default.	Specify the maximum number of clients for the FTP connection. Up to 32 clients is supported.

# M2M Cellular Gateway

<b>PASV Mode</b>	Optional setting	Check the <b>Enable</b> box to activate the support of PASV mode for a FTP connection from FTP clients.
<b>Port Range of PASV Mode</b>	Port <b>50000 ~ 50031</b> is set by default.	Specify the port range to allocate for PASV style data connection. <b><u>Value Range: 1024 ~ 65535.</u></b>
<b>Auto Report External IP in PASV Mode</b>	Optional setting	Check the <b>Enable</b> box to activate the support of overriding the IP address advertising in response to the PASV command.
<b>ASCII Transfer Mode</b>	Optional setting	Check the <b>Enable</b> box to activate the support of ASCII mode data transfers. Binary mode is supported by default.
<b>FTPS (FTP over SSL/TLS)</b>	Optional setting	Check the <b>Enable</b> box to activate the support of secure connections via SSL/TLS.

## Enable SFTP Server

SFTP Server Configuration <span>Save</span>	
Item	Setting
▶ SFTP	<input type="checkbox"/> Enable
▶ SFTP Port	<input type="text" value="22"/>

Configuration		
Item	Value setting	Description
<b>SFTP</b>	The box is unchecked by default.	Check <b>Enable</b> box to activate the embedded SFTP Server function. With the SFTP Server enabled, you can retrieve or delete the stored log files via secure SFTP connection.
<b>SFTP Port</b>	Default 22	Specify a port number for SFTP connection. The gateway will listen for incoming SFTP connections on the specified port. <b><u>Value Range: 1 ~ 65535.</u></b>

# M2M Cellular Gateway

## 6.3.2 User Account

This section allows user to setup user accounts for logging to the embedded FTP and SFTP server to retrieve the interested fog files.

Go to Administration > FTP > User Account tab.

### Create/Edit FTP User Accounts

User Account List <input type="button" value="Add"/> <input type="button" value="Delete"/>						
ID	User Name	Password	Directory	Permission	Enable	Actions

When **Add** button is applied, **User Account Configuration** screen will appear.

User Account Configuration <input type="button" value="Save"/>	
Item	Setting
▶ User Name	<input type="text"/>
▶ Password	<input type="text"/>
▶ Directory	<input type="button" value="Browse"/>
▶ Permission	<input type="text" value="Read/Write"/>
▶ Enable	<input checked="" type="checkbox"/>

Configuration		
Item	Value setting	Description
<b>User Name</b>	String : non-blank string	Enter the user account for login to the FTP server. <b>Value Range: 1 ~ 15 characters.</b>
<b>Password</b>	String : no blank	Enter the user password for login to the FTP server.
<b>Directory</b>	N/A	Select a root directory after user login.
<b>Permission</b>	<b>Read/Write</b> is selected by default.	Select the Read/write permission. Note: The embedded FTP Server is only for log downloading, so no any write permission is implemented for user file upload to the storage, even <b>Read/Write</b> option is selected.
<b>Enable</b>	The box is checked by default.	Check the box to activate the FTP user account.

# M2M Cellular Gateway

## 6.4 Diagnostic

This gateway supports simple network diagnosis tools for the administrator to troubleshoot and find the root cause of the abnormal behavior or traffics passing through the gateway. There can be a Packet Analyzer to help record the packets for a designated interface or specific source/destination host, and another Ping and Tracert tools for testing the network connectivity issues.

### 6.4.1 Diagnostic Tools

The Diagnostic Tools provide some frequently used network connectivity diagnostic tools (approaches) for the network administrator to check the device connectivity.

Go to Administration > Diagnostic > Diagnostic Tools tab.

Diagnostic Tools	
Item	Setting
▶ Ping Test	Host IP: <input type="text"/> Interface: <input type="text" value="Auto"/> <input type="button" value="Ping"/>
▶ Tracert Test	Host IP: <input type="text"/> Interface: <input type="text" value="Auto"/> <input type="button" value="UDP"/> <input type="button" value="Tracert"/>
▶ Wake on LAN	<input type="text"/> <input type="button" value="Wake up"/>

Diagnostic Tools		
Item	Value setting	Description
<b>Ping Test</b>	Optional Setting	This allows you to specify an IP / FQDN and the test interface (LAN, WAN, or Auto), so system will try to ping the specified device to test whether it is alive after clicking on the <b>Ping</b> button. A test result window will appear beneath it.
<b>Tracert Test</b>	Optional setting	Trace route (tracert) command is a network diagnostic tool for displaying the route (path) and measuring transit delays of packets across an IP network. Trace route proceeds until all (three) sent packets are lost for more than twice, then the connection is lost and the route cannot be evaluated. First, you need to specify an IP / FQDN, the test interface (LAN, WAN, or Auto) and the protocol (UDP or ICMP), and by default, it is <b>UDP</b> . Then, system will try to trace the specified host to test whether it is alive after clicking on <b>Tracert</b> button. A test result window will appear beneath it.
<b>Wake on LAN</b>	Optional setting	Wake on LAN (WOL) is an Ethernet networking standard that allows a computer to be turned on or awakened by a network message. You can specify the MAC address of the computer, in your LAN network, to be remotely turned on by clicking on the <b>Wake up</b> command button.
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.

# M2M Cellular Gateway

## 6.4.2 Packet Analyzer

The Packet Analyzer can capture packets depend on user settings. User can specify interfaces to capture packets and filter by setting rule. Ensure the log storage is available (either embedded SD-Card or external USB Storage), otherwise **Packet Analyzer** cannot be enabled.

Go to **Administration > Diagnostic > Packet Analyzer** tab.

Configuration	
Item	Setting
▶ Packet Analyzer	<input type="checkbox"/> Enable
▶ File Name	<input type="text"/>
▶ Split Files	<input type="checkbox"/> Enable File Size : <input type="text" value="200"/> <input type="text" value="KB"/>
▶ Packet Interfaces	<input type="checkbox"/> WAN-1 <input type="checkbox"/> WAN-2 <input type="checkbox"/> ASY-1 <input type="text" value="Binary Mode"/> <input type="text" value="v"/> 2.4G : <input type="checkbox"/> VAP-1 <input type="checkbox"/> VAP-2 <input type="checkbox"/> VAP-3 <input type="checkbox"/> VAP-4 <input type="checkbox"/> VAP-5 <input type="checkbox"/> VAP-6 <input type="checkbox"/> VAP-7 <input type="checkbox"/> VAP-8

Configuration		
Item	Value setting	Description
<b>Packet Analyzer</b>	The box is unchecked by default.	Check <b>Enable</b> box to activate the Packet Analyzer function. If you cannot enable the checkbox, please check if the storage is available or not. Plug in the USB storage and then enable the Package Analyzer function.
<b>File Name</b>	1. An optional setting 2. Blank is set by default, and the default file name is <b>&lt;Interface&gt;_&lt;Date&gt;_&lt;index&gt;</b> .	Enter the file name to save the captured packets in log storage. If <b>Split Files</b> option is also enabled, the file name will be appended with an index code " <b>_&lt;index&gt;</b> ". The extension file name is <b>.pcap</b> .
<b>Split Files</b>	1. An optional setting 2. The default value of <b>File Size</b> is 200 KB.	Check <b>enable</b> box to split file whenever log file reaching the specified limit. If the <b>Split Files</b> option is enabled, you can further specify the <b>File Size</b> and <b>Unit</b> for the split files. <b>Value Range: 10 ~ 99999.</b> NOTE: <b>File Size</b> cannot be less than 10 KB
<b>Packet Interfaces</b>	An optional setting	Define the interface(s) that <b>Packet Analyzer</b> should work on. At least, one interface is required, but multiple selections are also accepted. The supported interfaces can be: <ul style="list-style-type: none"> <li>● <b>WAN</b>: When the WAN is enabled at <b>Physical Interface</b>, it can be selected here.</li> <li>● <b>ASY</b>: This means the serial communication interface. It is used to capture packets appearing in the <b>Field Communication</b>. Therefore, it can only be selected when specific field communication protocol, like Modbus, is enabled.</li> </ul>

# M2M Cellular Gateway

		Select <b>Binary mode</b> or <b>String mode</b> for the serial interface.
		<ul style="list-style-type: none"> <li>● <b>VAP</b>: This means the virtual AP. When WiFi and VAP are enabled, it can be selected here.</li> </ul>
<b>Save</b>	N/A	Click the <b>Save</b> button to save the configuration.
<b>Undo</b>	N/A	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

Once you enabled the Packet Analyzer function on specific Interface(s), you can further specify some filter rules to capture the packets which matched the rules.

Capture Filters	
Item	Setting
▶ Filter	<input type="checkbox"/> Enable
▶ Source MACs	<input type="text"/>
▶ Source IPs	<input type="text"/>
▶ Source Ports	<input type="text"/>
▶ Destination MACs	<input type="text"/>
▶ Destination IPs	<input type="text"/>
▶ Destination Ports	<input type="text"/>

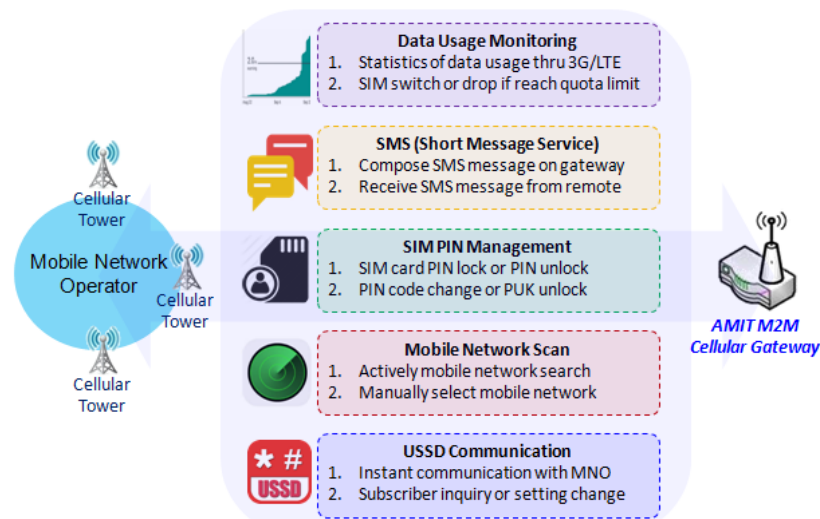

Capture Filters		
Item	Value setting	Description
<b>Filter</b>	Optional setting	Check <b>Enable</b> box to activate the Capture Filter function.
<b>Source MACs</b>	Optional setting	Define the filter rule with <b>Source MACs</b> , which means the source MAC address of packets. Packets which match the rule will be captured. Up to 10 MACs are supported, but they must be separated with “;”, e.g. AA:BB:CC:DD:EE:FF; 11:22:33:44:55:66 The packets will be captured when match any one MAC in the rule.

# M2M Cellular Gateway

<b>Source IPs</b>	Optional setting	Define the filter rule with <b>Source IPs</b> , which means the source IP address of packets. Packets which match the rule will be captured. Up to 10 IPs are supported, but they must be separated with “;”, e.g. 192.168.1.1; 192.168.1.2 The packets will be captured when match any one IP in the rule.
<b>Source Ports</b>	Optional setting	Define the filter rule with <b>Source Ports</b> , which means the source port of packets. The packets will be captured when match any port in the rule. Up to 10 ports are supported, but they must be separated with “;”, e.g. 80; 53 <b>Value Range:</b> 1 ~ 65535.
<b>Destination MACs</b>	Optional setting	Define the filter rule with <b>Destination MACs</b> , which means the destination MAC address of packets. Packets which match the rule will be captured. Up to 10 MACs are supported, but they must be separated with “;”, e.g. AA:BB:CC:DD:EE:FF; 11:22:33:44:55:66 The packets will be captured when match any one MAC in the rule.
<b>Destination IPs</b>	Optional setting	Define the filter rule with <b>Destination IPs</b> , which means the destination IP address of packets. Packets which match the rule will be captured. Up to 10 IPs are supported, but they must be separated with “;”, e.g. 192.168.1.1; 192.168.1.2 The packets will be captured when match any one IP in the rule.
<b>Destination Ports</b>	Optional setting	Define the filter rule with <b>Destination Ports</b> , which means the destination port of packets. The packets will be captured when match any port in the rule. Up to 10 ports are supported, but they must be separated with “;”, e.g. 80; 53 <b>Value Range:</b> 1 ~ 65535.

## Chapter 7 Service

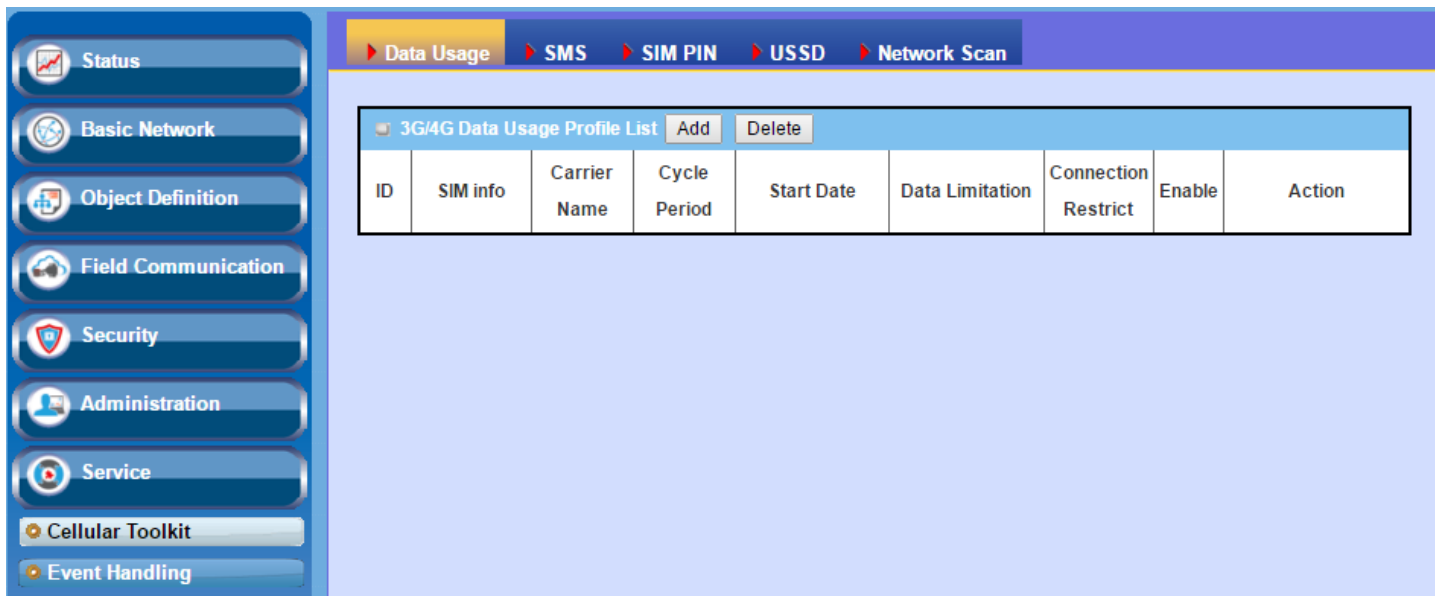

### 7.1 Cellular Toolkit

Besides cellular data connection, you may also like to monitor data usage of cellular WAN, sending text message through SMS, changing PIN code of SIM card, communicating with carrier/ISP by USSD command, or doing a cellular network scan for diagnostic purpose.

In Cellular Toolkit section, it includes several useful features that are related to cellular configuration or application. You can configure settings of Data Usage, SMS, SIM PIN, USSD, and Network Scan here. Please note at least a valid SIM card is required to be

inserted to device before you continue settings in this section.

# M2M Cellular Gateway

## 7.1.1 Data Usage

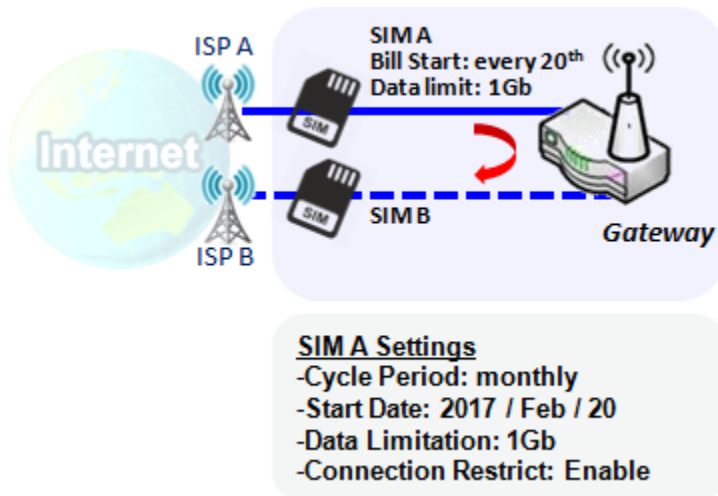

Most of data plan for cellular connection is with a limited amount of data usage. If data usage has been over limited quota, either you will get much lower data throughput that may affect your daily operation, or you will get a 'bill shock' in the next month because carrier/ISP charges a lot for the over-quota data usage.

With help from Data Usage feature, device will monitor cellular data usage continuously and take actions. If data usage reaches limited quota, device can be set to drop the cellular data connection right away. Otherwise, if secondary SIM card is inserted, device will switch to secondary SIM and establish another cellular data connection with secondary SIM automatically.

If Data Usage feature is enabled, all history of cellular data usage can be viewed at **Status > Statistics & Reports > Cellular Usage** tab.

3G/4G Data Usage Profile List <input type="button" value="Add"/> <input type="button" value="Delete"/>								
ID	SIM info	Carrier Name	Cycle Period	Start Date	Data Limitation	Connection Restrict	Enable	Action
1	3G/4G SIM A	ISP A	1 Monthly	Mon Feb 20 2017 00:00:00 GMT+0800	1GB	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="button" value="Edit"/> <input type="checkbox"/> Select

### 3G/4G Data Usage

Data Usage feature enabling gateway device to continuously monitor cellular data usage and take actions. In the diagram, quota limit of SIM A is **1Gb** per month and bill start date is **20<sup>th</sup>** of every month. The device is smart to start a new calculation of data usage on every 20<sup>th</sup> of month. Enable Connection Restrict will force gateway device to drop cellular connection of SIM A when data usage reaches quota limit (1Gb in this case). If SIM failover feature is configured in **Internet Setup**, then gateway will switch to SIM B and establish a new cellular data connection automatically.

# M2M Cellular Gateway

## Data Usage Setting

Go to **Service > Cellular Toolkit > Data Usage** tab.

Before finished settings for Data Usage, you need to know bill start date, bill period, and quota limit of data usage according to your data plan. You can ask this information from your carrier or ISP.

### Create / Edit 3G/4G Data Usage Profile

3G/4G Data Usage Profile List <input type="button" value="Add"/> <input type="button" value="Delete"/>								
ID	SIM info	Carrier Name	Cycle Period	Start Date	Data Limitation	Connection Restrict	Enable	Action

When **Add** button is applied, 3G/4G Data Usage Profile Configuration screen will appear. You can create up to four data usage profiles, one profile for each SIM card used in the Gateway.

3G/4G Data Usage Profile Configuration	
Item	Setting
▶ SIM Select	3G/4G ▼ SIM A ▼
▶ Carrier Name	<input type="text"/>
▶ Cycle Period	Days ▼ 90 <input type="text"/>
▶ Start Date	2016 ▼ / October ▼ / 11 ▼
▶ Data Limitation	<input type="text"/> KB ▼
▶ Connection Restrict	<input type="checkbox"/> Enable
▶ Enable	<input checked="" type="checkbox"/> Enable

3G/4G Data Usage Profile Configuration		
Item	Setting	Description
<b>SIM Select</b>	<b>3G/4G-1</b> and <b>SIM A</b> by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ), and a SIM card bound to the selected cellular interface to configure its data usage profile. <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
<b>Carrier Name</b>	It is an optional item.	Fill in the Carrier Name for the selected SIM card for identification.
<b>Cycle Period</b>	<b>Days</b> by default	The first box has three types for cycle period. They are <b>Days</b> , <b>Weekly</b> and <b>Monthly</b> . <b>Days:</b> For per Days cycle periods, you have to further specify the number of days in the second box. <b>Value Range:</b> 1 ~ 90 days. <b>Weekly, Monthly:</b> The cycle period is one week or one month.
<b>Start Date</b>	N/A	Specify the date to start measure network traffic. Please don't select the day before now, otherwise, the traffic statistics will be

# M2M Cellular Gateway

---

		incorrect.
<b>Data Limitation</b>	N/A	Specify the allowable data limitation for the defined cycle period.
<b>Connection Restrict</b>	Un-Checked by default.	Check the <b>Enable</b> box to activate the connection restriction function. During the specified cycle period, if the actual data usage exceeds the allowable data limitation, the cellular connection will be forced to disconnect.
<b>Enable</b>	Un-Checked by default.	Check the <b>Enable</b> box to activate the data usage profile.

# M2M Cellular Gateway

## 7.1.2 SMS

Short Message Service (SMS) is a text messaging service, which is used to be widely-used on mobile phones. It uses standardized communications protocols to allow mobile phones or cellular devices to exchange short text messages in an instant and convenient way.

### SMS Setting

Go to **Service > Cellular Toolkit > SMS** tab

With this gateway device, you can send SMS text messages or browse received SMS messages as you usually do on a cellular phone.

### Setup SMS Configuration

Configuration	
Item	Setting
▶ Physical Interface	3G/4G-1 ▼
▶ SMS	<input checked="" type="checkbox"/> Enable SIM Status: SIM_A
▶ SMS Storage	SIM Card Only ▼

Configuration		
Item	Value setting	Description
<b>Physical Interface</b>	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) for the following SMS function configuration. <b>Note: 3G/4G-2</b> is only available for for the product with dual cellular module.
<b>SMS</b>	The box is checked by default	This is the SMS switch. If the box checked that the SMS function enable, if the box unchecked that the SMS function disable.
<b>SIM Status</b>	N/A	Depend on currently SIM status. The possible value will be <b>SIM_A</b> or <b>SIM_B</b> .
<b>SMS Storage</b>	The box is <b>SIM Card Only</b> by default	This is the SMS storage location. Currently the option only <b>SIM Card Only</b> .
<b>Save</b>	N/A	Click the <b>Save</b> button to save the settings

# M2M Cellular Gateway

## SMS Summary

Show **Unread SMS**, **Received SMS**, **Remaining SMS**, and edit SMS context to send, read SMS from SIM card.

SMS Summary	
Item	Setting
▶ Unread SMS	1
▶ Received SMS	7
▶ Remaining SMS	12

SMS Summary		
Item	Value setting	Description
<b>Unread SMS</b>	N/A	If SIM card insert to router first time, unread SMS value is zero. When received the new SMS but didn't read, this value plus one.
<b>Received SMS</b>	N/A	This value record the existing SMS numbers from SIM card, When received the new SMS, this value plus one.
<b>Remaining SMS</b>	N/A	This value is SMS capacity minus received SMS, When received the new SMS, this value minus one.
<b>New SMS</b>	N/A	Click <b>New SMS</b> button, a <b>New SMS</b> screen appears. User can set the SMS setting from this screen. Refer to New SMS in the next page.
<b>SMS Inbox</b>	N/A	Click <b>SMS Inbox</b> button, a <b>SMS Inbox List</b> screen appears. User can read or delete SMS, reply SMS or forward SMS from this screen. Refer to SMS Inbox List in the next page.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to update the SMS summary immediately.

## New SMS

You can set the SMS setting from this screen.

New SMS	
Item	Setting
▶ Receivers	<input type="text"/> (Use '+' for International Format and ';' to Compose Multiple Receivers)
▶ Text Message	<div style="border: 1px solid gray; height: 100px; width: 100%;"></div> Length of Current Input : 0
▶ Result	

# M2M Cellular Gateway

New SMS		
Item	Value setting	Description
Receivers	N/A	Write the receivers to send SMS. User need to add the semicolon and compose multiple receivers that can group send SMS.
Text Message	N/A	Write the SMS context to send SMS. The router supports up to a maximum of 1023 character for SMS context length.
Send	N/A	Click the <b>Send</b> button, above text message will be sent as a SMS.
Result	N/A	If SMS has been sent successfully, it will show <b>Send OK</b> , otherwise <b>Send Failed</b> will be displayed.

## SMS Inbox List

You can read or delete SMS, reply SMS or forward SMS from this screen.

SMS Inbox List <span>Refresh</span> <span>Delete</span> <span>Close</span>				
ID	From Phone Number	Timestamp	SMS Text Preview	Actions

SMS Inbox List		
Item	Value setting	Description
ID	N/A	The number of SMS.
From Phone Number	N/A	What the phone number from SMS
Timestamp	N/A	What time receive SMS
SMS Text Preview	N/A	Preview the SMS text. Click the <b>Detail</b> button to read a certain message.
Action	The box is unchecked by default	Click the <b>Detail</b> button to read the SMS detail; Click the <b>Reply / Forward</b> button to reply/forward SMS. Besides, you can check the box(es), and then click the <b>Delete</b> button to delete the checked SMS(s).
Refresh	N/A	Refresh the SMS Inbox List.
Delete	N/A	Delete the SMS for all checked box from Action.
Close	N/A	Close the Detail SMS Message screen.

# M2M Cellular Gateway

## 7.1.3 SIM PIN

With most cases in the world, users need to insert a SIM card (a.k.a. UICC) into end devices to get on cellular network for voice service or data surfing. The SIM card is usually released by mobile operators or service providers. Each SIM card has a unique number (so-called ICCID) for network owners or service providers to identify each subscriber. As SIM card plays an important role between service providers and subscribers, some security mechanisms are required on SIM card to prevent any unauthorized access.

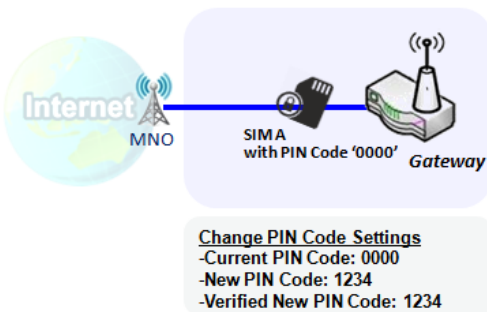

Enabling a PIN code in SIM card is an easy and effective way of protecting cellular devices from unauthorized access. This gateway device allows you to activate and manage PIN code on a SIM card through its web GUI.

### Activate PIN code on SIM Card

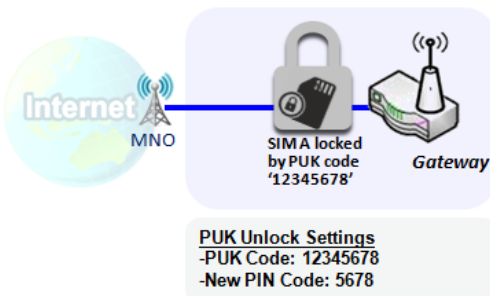

This gateway device allows you to activate PIN code on SIM card. This example shows how to activate PIN code on SIM-A for 3G/4G-1 with default PIN code “0000”.

### Change PIN code on SIM Card

This gateway device allows you to change PIN code on SIM card. Following the example above, you need to type original PIN code “0000”, and then type new PIN code with ‘1234’ if you like to set new PIN code as ‘1234’. To confirm the new PIN code you type is what you want, you need to type new PIN code ‘1234’ in Verified New PIN Code again.

### Unlock SIM card by PUK Code

If you entered incorrect PIN code at configuration page for 3G/4G-1 WAN over three times, and then it will cause SIM card to be locked by PUK code. Then you have to call service number to get a PUK code to unlock SIM card. In the diagram, the PUK code is “12345678” and new PIN code is “5678”.

# M2M Cellular Gateway

## SIM PIN Setting

Go to **Service > Cellular Toolkit > SIM PIN** Tab

With the SIM PIN Function window, it allows you to enable or disable SIM lock (which means protected by PIN code), or change PIN code. You can also see the information of remaining times of failure trials as we mentioned earlier. If you run out of these failure trials, you need to get a PUK code to unlock SIM card.

### Select a SIM Card

Configuration	
Item	Setting
▶ Physical Interface	3G/4G-1 ▼
▶ SIM Status	SIM-A Ready
▶ SIM Selection	SIM-A ▼ <input type="button" value="Switch"/>

Configuration Window		
Item	Value setting	Description
<b>Physical Interface</b>	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to change the SIM PIN setting for the selected SIM Card. <b>Note: 3G/4G-2</b> is only available for for the product with dual cellular module.
<b>SIM Status</b>	N/A	Indication for the selected SIM card and the SIM card status. The status could be <b>Ready</b> , <b>Not Insert</b> , or <b>SIM PIN</b> . <b>Ready</b> -- SIM card is inserted and ready to use. It can be a SIM card without PIN protection or that SIM card is already unlocked by correct PIN code. <b>Not Insert</b> -- No SIM card is inserted in that SIM slot. <b>SIM PIN</b> -- SIM card is protected by PIN code, and it's not unlocked by a correct PIN code yet. That SIM card is still at locked status.
<b>SIM Selection</b>	N/A	Select the SIM card for further SIM PIN configuration. Press the <b>Switch</b> button, then the Gateway will switch SIM card to another one. After that, you can configure the SIM card.

# M2M Cellular Gateway

## Enable / Change PIN Code

Enable or Disable PIN code (password) function, and even change PIN code function.

SIM function	
<input type="button" value="Save"/> <input type="button" value="Change PIN Code"/>	
Item	Setting
▶ SIM lock	<input type="checkbox"/> Enable PIN Code: <input type="text"/> (4~8 digits)
▶ Remaining times	3

SIM function Window		
Item Setting	Value setting	Description
<b>SIM lock</b>	Depend on SIM card	Click the <b>Enable</b> button to activate the SIM lock function. For the first time you want to enable the SIM lock function, you have to fill in the PIN code as well, and then click <b>Save</b> button to apply the setting.
<b>Remaining times</b>	Depend on SIM card	Represent the remaining trial times for the SIM PIN unlocking.
<b>Save</b>	N/A	Click the <b>Save</b> button to apply the setting.
<b>Change PIN Code</b>	N/A	Click the <b>Change PIN code</b> button to change the PIN code (password). If the <b>SIM Lock</b> function is not enabled, the <b>Change PIN code</b> button is disabled. In the case, if you still want to change the PIN code, you have to enable the SIM Lock function first, fill in the PIN code, and then click the <b>Save</b> button to enable. After that, You can click the <b>Change PIN code</b> button to change the PIN code.

When **Change PIN Code** button is clicked, the following screen will appear.

Item	Setting
▶ Current PIN Code	<input type="text"/> (4~8 digits)
▶ New PIN Code	<input type="text"/> (4~8 digits)
▶ Verified New PIN Code	<input type="text"/> (4~8 digits)

Item	Value Setting	Description
<b>Current PIN Code</b>	A Must filled setting	Fill in the current (old) PIN code of the SIM card.
<b>New PIN Code</b>	A Must filled setting	Fill in the new PIN Code you want to change.
<b>Verified New PIN Code</b>	A Must filled setting	Confirm the new PIN Code again.
<b>Apply</b>	N/A	Click the <b>Apply</b> button to change the PIN code with specified new PIN code.
<b>Cancel</b>	N/A	Click the <b>Cancel</b> button to cancel the changes and keep current PIN code.

**Note:** If you changed the PIN code for a certain SIM card, you must also change the corresponding PIN code

# M2M Cellular Gateway

specified in the **Basic Network > WAN & Uplink > Internet Setup > Connection with SIM Card** page. Otherwise, it may result in wrong SIM PIN trials with invalid (old) PIN code.

## Unlock with a PUK Code

The PUK Function window is only available for configuration if that SIM card is locked by PUK code. It means that SIM card is locked and needs additional PUK code to unlock. Usually it happens after too many trials of incorrect PIN code, and the remaining times in SIM Function table turns to 0. In this situation, you need to contact your service provider and request a PUK code for your SIM card, and try to unlock the locked SIM card with the provided PUK code. After unlocking a SIM card by PUK code successfully, the SIM lock function will be activated automatically.

<input type="checkbox"/> PUK function <input type="button" value="Save"/>	
Item	Setting
▶ PUK status	PUK unlock.
▶ Remaining times	N/A
▶ PUK Code	<input type="text"/> (8 digits)
▶ New PIN Code	<input type="text"/> (4~8 digits)

PUK Function Window		
Item	Value setting	Description
<b>PUK status</b>	<b>PUK Unlock / PUK Lock</b>	Indication for the PUK status. The status could be <b>PUK Lock</b> or <b>PUK Unlock</b> . As mentioned earlier, the SIM card will be locked by PUK code after too many trials of failure PIN code. In this case, the PUK Status will turns to <b>PUK Lock</b> . In a normal situation, it will display <b>PUK Unlock</b> .
<b>Remaining times</b>	Depend on SIM card	Represent the remaining trial times for the PUK unlocking. Note : <b>DO NOT make the remaining times down to zero, it will damage the SIM card FOREVER !</b> Call for your ISP's help to get a correct PUK and unlock the SIM if you don't have the PUK code.
<b>PUK Code</b>	A Must filled setting	Fill in the PUK code (8 digits) that can unlock the SIM card in PUK unlock status.
<b>New PIN Code</b>	A Must filled setting	Fill in the New PIN Code (4~8 digits) for the SIM card. You have to determine your new PIN code to replace the old, forgotten one. Keep the PIN code (password) in mind with care.
<b>Save</b>	N/A	Click the <b>Save</b> button to apply the setting.

**Note:** If you changed the PUK code and PIN code for a certain SIM card, you must also change the corresponding PIN code specified in the **Basic Network > WAN & Uplink > Internet Setup > Connection with SIM Card** page. Otherwise, it may result in wrong SIM PIN trials with invalid (old) PIN code.

# M2M Cellular Gateway

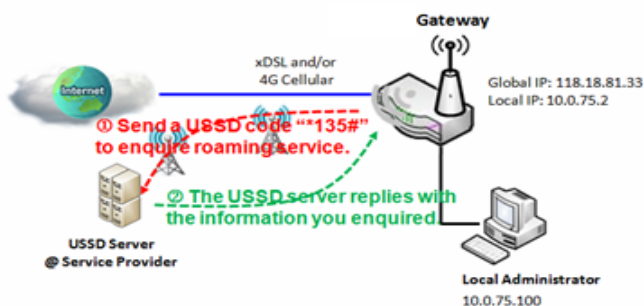

## 7.1.4 USSD

Unstructured Supplementary Service Data (USSD) is a protocol used by GSM cellular telephones to communicate with the service provider's computers. USSD can be used for WAP browsing, prepaid callback service, mobile-money services, location-based content services, menu-based information services, and as part of configuring the phone on the network.

An USSD message is up to 182 alphanumeric characters in length. Unlike Short Message Service (SMS) messages, USSD messages create a real-time connection during an USSD session. The connection remains open, allowing a two-way exchange of a sequence of data. This makes USSD more responsive than services that use SMS.

Configuration				
Item	Setting

USSD Profile	roaming setting			
USSD Command	*135#			
USSD Response	< ChungHwa Data Roaming Services> 1 Order 2 Query 3 Setting 4 使用中文			

### USSD Scenario

USSD allows you to have an instant bi-directional communication with carrier/ISP. In the diagram, the USSD command '\*135#' is referred to data roaming services. After sending that USSD command to carrier, you can get a response at window USSD Response. Please note the USSD command varies for different carriers/ISP.

# M2M Cellular Gateway

## USSD Setting

Go to **Service > Cellular Toolkit > USSD** tab.

In "USSD" page, there are four windows for the USSD function. The "Configuration" window can let you specify which 3G/4G module (physical interface) is used for the USSD function, and system will show which SIM card in the module is the current used one. The second window is the "USSD Profile List" and it shows all your defined USSD profiles that store pre-commands for activating an USSD session. An "Add" button in the window can let you add one new USSD profile and define the command for the profile in the third window, the "USSD Profile Configuration". When you want to start the activation of an USSD connection session to the USSD server, select the USSD profile or type in the correct pre-command, and then click on the "Send" button for the session. The responses from the USSD server will be displayed beneath the "USSD Command" line. When commands typed in the "USSD Command" field are sent, received responses will be displayed in the "USSD Response" blank space. User can communicate with the USSD server by sending USSD commands and getting USSD responses via the gateway.

## USSD Configuration

Configuration	
Item	Setting
Physical Interface	3G/4G-1 SIM Status: SIM_A

Configuration Item	Value setting	Description
Physical Interface	The box is <b>3G/4G-1</b> by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to configure the USSD setting for the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ). <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
SIM Status	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).

## Create / Edit USSD Profile

The cellular gateway allows you to custom your USSD profile. It supports up to a maximum of 35 USSD profiles.

USSD Profile List <span>Add</span> <span>Delete</span>				
ID	Profile Name	USSD Command	Comments	Actions

# M2M Cellular Gateway

When **Add** button is applied, **USSD Profile Configuration** screen will appear.

USSD Profile Configuration <span>Save</span>	
Item	Setting
▶ Profile Name	<input type="text"/>
▶ USSD Command	<input type="text"/>
▶ Comments	<input type="text"/>

USSD Profile Configuration		
Item	Value setting	Description
<b>Profile Name</b>	N/A	Enter a name for the USSD profile.
<b>USSD Command</b>	N/A	Enter the USSD command defined for the profile. Normally, it is a command string composed with numeric keypad "0~9", "*", and "#". The USSD commands are highly related to the cellular service, please check with your service provider for the details.
<b>Comments</b>	N/A	Enter a brief comment for the profile.

## Send USSD Request

When **send** the USSD command, the USSD Response screen will appear.

When click the **Clear** button, the USSD Response will disappear.

USSD Request <span>Send</span> <span>Clear</span>	
Item	Setting
▶ USSD Profile	<input type="text" value="--- Option ---"/>
▶ USSD Command	<input type="text"/>

USSD Request		
Item	Value setting	Description
<b>USSD Profile</b>	N/A	Select a USSD profile name from the dropdown list.
<b>USSD Command</b>	N/A	The USSD Command string of the selected profile will be shown here.
<b>USSD Response</b>	N/A	Click the <b>Send</b> button to send the USSD command, and the <b>USSD Response</b> screen will appear. You will see the response message of the corresponding service, receive the service SMS.

# M2M Cellular Gateway

## 7.1.5 Network Scan

"Network Scan" function can let administrator specify the device how to connect to the mobile system for data communication in each 3G/4G interface. For example, administrator can specify which generation of mobile system is used for connection, 2G, 3G or LTE. Moreover, he can define their connection sequence for the gateway device to connect to the mobile system automatically. Administrator also can scan the mobile systems in the air manually, select the target operator system and apply it. The manual scanning approach is used for problem diagnosis.

### Network Scan Setting

Go to **Service > Cellular Toolkit > Network Scan** tab.

In "Network Scan" page, there are two windows for the Network Scan function. The "Configuration" window can let you select which 3G/4G module (physical interface) is used to perform Network Scan, and system will show the current used SIM card in the module. You can configure each 3G/4G WAN interface by executing the network scanning one after another. You can also specify the connection sequence of the targeted generation of mobile system, 2G/3G/LTE.

### Network Scan Configuration

Configuration	
Item	Setting
▶ Physical Interface	3G/4G-1 ▼ SIM Status: SIM_A
▶ Network Type	Auto ▼
▶ Scan Approach	Auto ▼

Configuration		
Item	Value setting	Description
<b>Physical Interface</b>	The box is <b>3G/4G-1</b> by default	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) for the network scan function. <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
<b>SIM Status</b>	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).
<b>Network Type</b>	<b>Auto</b> is selected by default.	Specify the network type for the network scan function. It can be Auto, 2G Only, 2G prefer, 3G Only, 3G prefer, or LTE Only. When <b>Auto</b> is selected, the network will be register automatically; If the <b>prefer</b> option is selected, network will be register for your option first; If the <b>only</b> option is selected, network will be register for your option only.
<b>Scan Approach</b>	<b>Auto</b> is selected by default.	When <b>Auto</b> selected, cellular module register automatically. If the <b>Manually</b> option is selected, a <b>Network Provider List</b> screen appears. Press <b>Scan</b> button to scan for the nearest base stations. Select (check the box) the preferred base stations then click <b>Apply</b> button to apply settings.

# M2M Cellular Gateway

**Save** N/A Click **Save** to save the settings

The second window is the "Network Provider List" window and it appears when the **Manually** Scan Approach is selected in the Configuration window. By clicking on the "Scan" button and wait for 1 to 3 minutes, the found mobile operator system will be displayed for you to choose. Click again on the "Apply" button to drive system to connect to that mobile operator system for the dedicated 3G/4G interface.

Network Provider List <input type="button" value="Scan"/> <input type="button" value="Apply"/>			
Provider Name	Mobile System	Network Status	Action
Chunghwa Telecom	4G	Current	<input type="checkbox"/> Select
Far EasTone	3G	Forbidden	<input type="checkbox"/> Select

## 7.2 Event Handling

Event handling is the application that allows administrator to setup the pre-defined events, handlers, or response behavior with individual profiles. With properly configuring the event handling function, administrator can easily and remotely obtain the status and information via the purchased gateway.

The supported events are categorized into two groups: the **managing events** and **notifying events**.

The **managing events** are the events that are used to manage the gateway or change the setting / status of the specific functionality of the gateway. On receiving the managing event, the gateway will take action to change the functionality, and collect the required status for administration simultaneously.

The **notifying events** are the events that some related objects have been triggered and take corresponding actions on the occurrence of the events. It could be an event for alerting the administrator something happened with SMS message, Email, and SNMP Trap, etc...

For ease of configuration, administrator can create and edit the common pre-defined managing / notifying event profiles for taking instant reaction on a certain event or managing the devices for some advanced useful purposes. For example, sending/receiving remote managing SMS for the gateway's routine maintaining, and so on. All of such management and notification function can be realized effectively via the Event Handling feature.

The following is the summary lists for the provided profiles, and events:

- Profiles (Rules):
  - SMS Configuration and Accounts
  - Email Accounts
  
- Managing Events:
  - Trigger Type: SMS, SNMP Trap
  - Actions: Get the Network Status; or Configure the LAN/VLAN behavior, NAT behavior, Firewall behavior, VPN behavior, System Management, Administration.
  
- Notifying Events:
  - Trigger Type: Connection Change (WAN, LAN & VLAN, DDNS), Administration, and Data Usage.
  - Actions: Notify the administrator with SMS, Syslog, SNMP Trap or Email Alert.

To use the event handling function, First of all, you have to enable the event management setting and configure the event details with the provided profile settings. You can create or edit pre-defined profiles for individual managing / notifying events. The profile settings are separated into several items; they are the SMS Account Definition, and Email Service Definition. Then, you have to configure each managing / notifying event with identifying the event's trigger condition, and the corresponding actions (reaction for the event) for the event. For each event, more than one action can be activated simultaneously.

# M2M Cellular Gateway

## 7.2.1 Configuration

Go to **Service > Event Handling > Configuration** Tab.

Event handling is the service that allows administrator to setup the pre-defined events, handlers, or response behavior with individual profiles.

### Enable Event Management

Configuration	
Item	Setting
▶ Event Management	<input type="checkbox"/> Enable

Configuration		
Item	Value setting	Description
<b>Event Management</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Event Management function.

### Enable SMS Management

To use the SMS management function, you have to configure some important settings first.

SMS Configuration	
Item	Setting
▶ Message Prefix	<input type="checkbox"/> Enable & <input type="text"/>
▶ Physical Interface	<input type="text" value="3G/4G-1"/> SIM Status: SIM_A
▶ Delete Managed SMS after Processing	<input type="checkbox"/> Enable

SMS Configuration		
Item	Value setting	Description
<b>Message Prefix</b>	The box is unchecked by default	Click the <b>Enable</b> box to enable the SMS prefix for validating the received SMS. Once the function is enabled, you have to enter the prefix behind the checkbox. The received managing events SMS must have the designated prefix as an initial identifier, then corresponding handlers will become effective for further processing.

# M2M Cellular Gateway

<b>Physical Interface</b>	The box is 3G/4G-1 by default.	Choose a cellular interface ( <b>3G/4G-1</b> or <b>3G/4G-2</b> ) to configure the SMS management setting. <b>Note:</b> <b>3G/4G-2</b> is only available for for the product with dual cellular module.
<b>SIM Status</b>	N/A	Show the connected cellular service (identified with <b>SIM_A</b> or <b>SIM_B</b> ).
<b>Delete Managed SMS after Processing</b>	The box is unchecked by default	Check the <b>Enable</b> box to delete the received managing event SMS after it has been processed.

## Create / Edit SMS Account

Setup the SMS Account for managing the gateway through the SMS. It supports up to a maximum of 5 accounts.

SMS Account List <input type="button" value="Add"/> <input type="button" value="Delete"/>						
ID	Phone Number	Phone Description	Application	Send confirmed SMS	Enable	Actions

You can click the **Add / Edit** button to configure the SMS account.

SMS Account Configuration	
Item	Setting
▶ Phone Number	Specific Number ▼ <input type="text"/>
▶ Phone Description	<input type="text"/>
▶ Application	<input type="checkbox"/> Event Trigger <input type="checkbox"/> Notify Handle
▶ Send confirmed SMS	<input type="checkbox"/> Enable
▶ Enable	<input checked="" type="checkbox"/> Enable
<input type="button" value="Save"/>	

SMS Account Configuration		
Item	Value setting	Description
<b>Phone Number</b>	1. Mobile phone number format 2. A Must filled setting	Select the Phone number policy from the drop list, and specify a mobile phone number as the SMS account identifier if required. It can be <b>Specific Number</b> , or <b>Allow Any</b> . If <b>Specific Number</b> is selected, you have to specify the phone number as the SMS account identifier. <b>Value Range:</b> -1 ~ 32 digits.
<b>Phone Description</b>	1. Any text 2. An Optional setting	Specify a brief description for the SMS account.
<b>Application</b>	A Must filled setting	Specify the application type. It could be <b>Event Trigger</b> , <b>Notify Handle</b> , or <b>both</b> . If the Phone Number policy is <b>Allow Any</b> , the Noftify Handle will be unavailable.
<b>Send confirmed</b>	1. An Optional setting 2. The box is unchecked by	Click <b>Enable</b> box to active the SMS response function. The gateway will send a confirmed message back to the sender whenever it

# M2M Cellular Gateway

<b>SMS</b>	default.	received a SMS managing event. The confirmed message is similar to following format: "Device received a SMS with command xxxxx."
<b>Enable</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this account.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration.

## Create / Edit Email Service Account

Setup the Email Service Account for event notification. It supports up to a maximum of 5 accounts.

Email Service List <input type="button" value="Add"/> <input type="button" value="Delete"/>				
ID	Email Server	Email Addresses	Enable	Actions

You can click the **Add / Edit** button to configure the Email account.

Email Service Configuration	
Item	Setting
▶ Email Server	--- Option --- ▼
▶ Email Addresses	<input type="text"/>
▶ Enable	<input checked="" type="checkbox"/> Enable
<input type="button" value="Save"/>	

Email Service Configuration		
Item	Value setting	Description
<b>Email Server</b>	--- Option ---	Select an Email Server profile from <b>External Server</b> setting for the email account setting.
<b>Email Addresses</b>	1. Internet E-mail address format 2. A Must filled setting	Specify the Destination Email Addresses.
<b>Enable</b>	The box is unchecked by default.	Click <b>Enable</b> box to activate this account.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration

# M2M Cellular Gateway

## 7.2.2 Managing Events

Managing Events allow administrator to define the relationship (rule) among event trigger, handlers and response.

Go to **Service > Event Handling > Managing Events** Tab.

### Enable Managing Events

Configuration	
Item	Setting
▶ Managing Events	<input type="checkbox"/> Enable

Configuration		
Item	Value setting	Description
<b>Managing Events</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Managing Events function.

### Create / Edit Managing Event Rules

Setup the Managing Event rules. It supports up to a maximum of 128 rules.

Managing Event List <input type="button" value="Add"/> <input type="button" value="Delete"/>				
ID	Event	Description	Enable	Actions

When **Add** or **Edit** button is applied, the **Managing Event Configuration** screen will appear.

Managing Event Configuration	
Item	Setting
▶ Event	SMS <input type="text"/>
▶ Description	<input type="text"/>
▶ Action	<input type="checkbox"/> Network Status <input type="checkbox"/> LAN&VLAN <input type="checkbox"/> NAT <input type="checkbox"/> Firewall <input type="checkbox"/> VPN <input type="checkbox"/> GRE <input type="checkbox"/> System Manage <input type="checkbox"/> Administration <input type="checkbox"/> Digital Output
▶ Managing Event	<input checked="" type="checkbox"/> Enable
<input type="button" value="Save"/>	

Managing Event Configuration		
Item	Value setting	Description

# M2M Cellular Gateway

<b>Event</b>	<b>SMS</b> (or <b>SNMP Trap</b> ) by default	<p>Specify the Event type (<b>SMS</b>, <b>SNMP Trap</b>) and an event identifier / profile.</p> <p><b>SMS</b>: Select <b>SMS</b> and fill the message in the textbox to as the trigger condition for the event;</p> <p><b>SNMP</b>: Select <b>SNMP Trap</b> and fill the message in the textbox to specify SNMP Trap Event;</p> <p><i>Note: The available Event Type could be different for the purchased product.</i></p>
<b>Description</b>	String format : any text.	Enter a brief description for the Managing Event.
<b>Action</b>	All box is unchecked by default.	<p>Specify <b>Network Status</b>, or at least one rest action to take when the expected event is triggered.</p> <p><b>Network Status</b>: Select Network Status Checkbox to get the network status as the action for the event;</p> <p><b>LAN&amp;VLAN</b>: Select <b>LAN&amp;VLAN</b> Checkbox and the interested sub-items (Port link On/Off), the gateway will change the settings as the action for the event;</p> <p><b>NAT</b>: Select <b>NAT</b> Checkbox and the interested sub-items (Virtual Server Rule On/Off, DMZ On/Off), the gateway will change the settings as the action for the event;</p> <p><b>Firewall</b>: Select <b>Firewall</b> Checkbox and the interested sub-items (Remote Administrator Host ID On/Off), the gateway will change the settings as the action for the event;</p> <p><b>VPN</b>: Select <b>VPN</b> Checkbox and the interested sub-items (IPSec Tunnel ON/Off, PPTP Client On/Off, L2TP Client On/Off, OpenVPN Client On/Off), the gateway will change the settings as the action for the event;</p> <p><b>GRE</b>: Select <b>GRE</b> Checkbox and the interested sub-items (GRE Tunnel On/Off), the gateway will change the settings as the action for the event;</p> <p><b>System Manage</b>: Select <b>System Manage</b> Checkbox and the interested sub-items (WAN SSH Service On/Off, TR-069 On/Off), the gateway will change the settings as the action for the event;</p> <p><b>Administration</b>: Select <b>Administration</b> Checkbox and the interested sub-items (Backup Config, Restore Config, Reboot, Save Current Setting as Default), the gateway will change the settings as the action for the event;</p> <p><i>Note: The available Event Type could be different for the purchased product.</i></p>
<b>Managing Event</b>	The box is checked by default.	Click <b>Enable</b> box to activate this Managing Event setting.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration
<b>Undo</b>	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

# M2M Cellular Gateway

## 7.2.3 Notifying Events

Go to **Service > Event Handling > Notifying Events** Tab.

Notifying Events Setting allows administrator to define the relationship (rule) between event trigger and handlers.

### Enable Notifying Events

Configuration	
Item	Setting
▶ Notifying Events	<input checked="" type="checkbox"/> Enable

Item	Value setting	Description
<b>Notifying Events</b>	The box is unchecked by default	Check the <b>Enable</b> box to activate the Notifying Events function.

### Create / Edit Notifying Event Rules

Setup your Notifying Event rules. It supports up to a maximum of 128 rules.

Notifying Event List <input type="button" value="Add"/> <input type="button" value="Delete"/>					
ID	Event	Description	Action	Enable	Actions

When **Add** or **Edit** button is applied, the **Notifying Event Configuration** screen will appear.

Notifying Event Configuration	
Item	Setting

▶ Description	<input type="text"/>
▶ Action	<input type="checkbox"/> Digital Output <input type="checkbox"/> SMS <input type="checkbox"/> Syslog <input type="checkbox"/> SNMP Trap <input type="checkbox"/> Email Alert
▶ Time Schedule	(0) Always <input type="button" value="v"/>
▶ Notifying Events	<input checked="" type="checkbox"/> Enable
<input type="button" value="Save"/>	

Item	Value setting	Description
------	---------------	-------------

# M2M Cellular Gateway

<b>Event</b>	<b>Digital Input (or WAN)</b> by default	<p>Specify the Event type and corresponding event configuration. The supported Event Type could be:</p> <p><b>WAN:</b> Select <b>WAN</b> and a trigger condition to specify a certain WAN Event;</p> <p><b>LAN&amp;VLAN:</b> Select <b>LAN&amp;VLAN</b> and a trigger condition to specify a certain LAN&amp;VLAN Event;</p> <p><b>DDNS:</b> Select <b>DDNS</b> and a trigger condition to specify a certain DDNS Event;</p> <p><b>Administration:</b> Select <b>Administration</b> and a trigger condition to specify a certain Administration Event;</p> <p><b>Data Usage:</b> Select <b>Data Usage</b>, the SIM Card (Cellular Service) and a trigger condition to specify a certain Data Usage Event;</p> <p><i>Note: The available Event Type could be different for the purchased product.</i></p>
<b>Description</b>	String format : any text.	Enter a brief description for the Notifying Event.
<b>Action</b>	All box is unchecked by default.	<p>Specify at least one action to take when the expected event is triggered.</p> <p><b>SMS:</b> Select <b>SMS</b>, and the gateway will send out a SMS to all the defined SMS accounts as the action for the event;</p> <p><b>Syslog:</b> Select <b>Syslog</b> and select/unselect the Enable Checkbox to as the action for the event;</p> <p><b>SNMP Trap:</b> Select <b>SNMP Trap</b>, and the gateway will send out SNMP Trap to the defined SNMP Event Receivers as the action for the event;</p> <p><b>Email Alert:</b> Select <b>Email Alert</b>, and the gateway will send out an Email to the defined Email accounts as the action for the event;</p> <p><i>Note: The available Event Type could be different for the purchased product.</i></p>
<b>Time Schedule</b>	<b>(0) Always</b> is selected by default	Select a time scheduling rule for the Notifying Event.
<b>Notifying Events</b>	The box is checked by default.	Click <b>Enable</b> box to activate this Notifying Event setting.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration
<b>Undo</b>	NA	Click the <b>Undo</b> button to restore what you just configured back to the previous setting.

# M2M Cellular Gateway

## 7.3 Location Tracking

Location tracking applications are usually referred to applications that take benefits from Global Navigation Satellite System (GNSS). GNSS is the infrastructure that allows devices to determine its position, velocity, and time by processing satellites signals from outer space. GNSS includes varieties of satellite systems and Satellite-Based Augmentation Systems (SBAS). SBAS is usually used for improving positioning accuracy. The tables below show 4 major GNSS system in the world, and SBAS system in different areas.

### Major GNSS System in the world

GNSS System	Owner
GPS	USA
GLONASS	Russia
Galileo	European Union
BeiDou (COMPASS)	China

### Satellite-Based Augmentation System (SBAS)

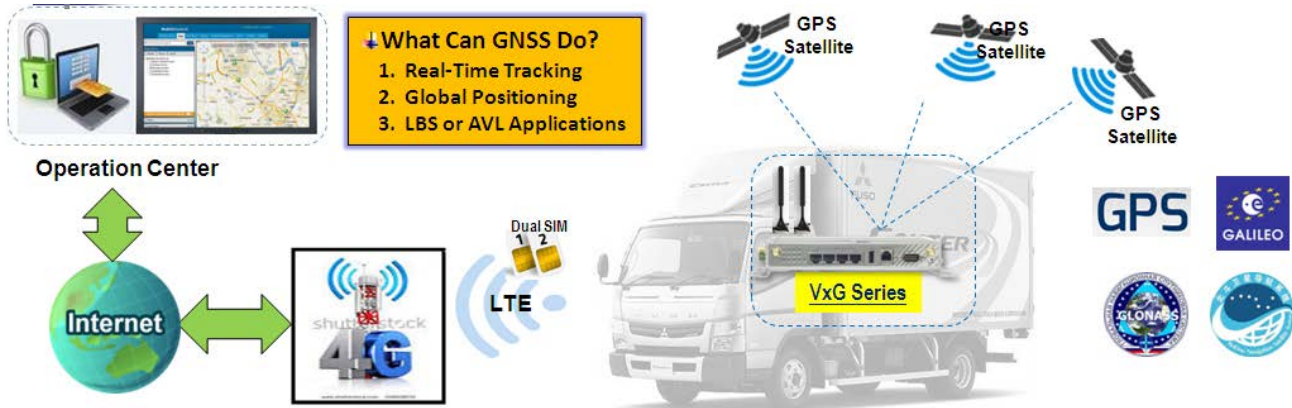

SBAS	Area Coverage
EGNOS	Europe
WAAS	North America
GAGAN	India
MSAS	Japan

Position applications are widely-used by varieties of industrial applications, including Location-Based Services (LBS), Automatic Vehicle Location (AVL), Fleet Management, or assets tracking. However, in most case, GNSS is a one-way communication. That means GNSS-compatible device can only locate its location by receiving GNSS signal, but it can't forward its location data to any other identity through GNSS system. According to this limitation by GNSS system, devices usually need to equip other technology to transmit their location data to back-end server for track or further analysis. Furthermore, as the position applications are more applied on moving objects, a kind of wireless technology would be more suitable to be adopted to transmit location data. Nowadays, thanks to popularity and wide coverage of cellular technology (GSM, 3G, 4G/LTE), transmitting location data to remote center in real time is no longer a hurdle. In addition, the data format of location data is NMEA 0183 compatible, so the back-end server will be easy to interpret the collected location data.

Hereunder are the main features of GNSS function in cellular gateway, if optional GNSS function is supported.

# M2M Cellular Gateway

- Retrieve GNSS data from satellites and send to remote operation center periodically or save in local storage.
- Global positioning with multiple GNSS systems, including GPS, and optional for GLONASS, Galileo, or BeiDou.
- Mandatory for varieties of LBS (Location-Based Service) applications, such as advertisement, emergent call.
- Easy integration with AVL (Automatic Vehicle Location) applications, for managing fleet of service vehicles.
- Other value-added applications, such as asset tracking, electronic toll collection, intelligent transport system.

## 7.3.1 GNSS

With GNSS configuration page, you can configure those functions that are mentioned above. Please note the available GNSS features on different models may be different. Please check product datasheet for details.

The configuration steps include following items.

- Activate GNSS feature in gateway and finish settings of cellular WAN.
- Support NMEA 0183 (compatible to 3.0) protocol, and allow customized prefix and suffix.
- Configurable GPS data logging on local microSD card storage for route record tracking.
- Indicate remote host, time interval, TCP/UDP, and type of GPS data that would be sent.

### ● GPS Message Type

This item shows all supported types of NMEA 0183 data format. NMEA 0183 data format was defined and maintained by National Marine Electronics Association (NMEA). Select one or more types that you want to use for transmitting GPS data. In most case, this configuration depends on which data format that your central server can recognize. Only select the type you need, otherwise it will consume unnecessary network bandwidth. The table below shows more information for different types of NMEA 0183 message.

Type	Description	Example
GGA	Fix Information	\$GPGGA,123519,4807.038,N,01131.000,E,1,08,0.9,545.4,M,46.9,M,,*47
GLL	Lat/Lon Data	\$GPGLL,4916.45,N,12311.12,W,225444,A,*1D
GSA	Overall Satellite Data	\$GPGSA,A,3,04,05,,09,12,,,24,,,,,2.5,1.3,2.1*39

# M2M Cellular Gateway

GSV	Detailed Satellite Data	\$GPGSV,2,1,08,01,40,083,46,02,17,308,41,12,07,344,39,14,22,228,45*75
RMC	Recommended Minimum Data	\$GPRMC,123519,A,4807.038,N,01131.000,E,022.4,084.4,230394,003.1,W*6A
VTG	Vector Track and Speed Over the Ground	\$GPVTG,054.7,T,034.4,M,005.5,N,010.2,K*48

Please note this option is hardware dependent. The available options of GPS message type show on this page is according to product specification. You may not see all options if your product doesn't support all of them.

## ● SBAS

SBAS is Satellite-Based Augmentation Systems that is used to improve accuracy of location data. There are several SBAS systems for different areas in the world.

SBAS	Area Coverage
EGNOS	Europe
WAAS	North America
GAGAN	India
MSAS	Japan

Please note this option is hardware dependent. You may not see this option if your product doesn't support it.

## ● Assisted GPS

Assisted GPS (as known as A-GPS) is used for speeding up location fix, especially when satellite signal is weak. If activating this option, gateway will download almanac data from A-GPS server through IP network instead of from satellite. You can also choose different valid period of almanac data. The shorter almanac data will get higher accuracy. However, the almanac data with shorter valid period needs to be updated more frequently. It will consume more network bandwidth. Please note this option is hardware dependent. You may not see this option if your product doesn't support it.

## ● Data to Storage

Besides transmitting location data to remote server, you can also store location data into internal storage (e.g. microSD card) or external storage (e.g. USB drive) if any. Regarding to data format, either can be NMEA 0183 raw data format or save it as GPX file format. The location data will be saved to a new file if the original file size is bigger than the pre-defined file size. The "Download log file" button allows you to browse all saved log files and download to your personal devices.

# M2M Cellular Gateway

## ➤ Scenario of location tracking for fleet management

A fleet owner would like to see the locations of his trucks in real time. He also likes to know where his trucks have been passed through with time information. In his operation office, there is a server (IP: 100.100.100.1) which can interpret NMEA RMC data format and shows truck's location and track on map. This server is listening on TCP port 888 to receive NMEA RMC packet from trucks. IMEI number will be added before NMEA RMC data for identification of each truck. Hereunder is the configuration on each truck.

### Basic Settings:

Configuration Path	[GNSS]-[Configuration]
GNSS	<i>Enable</i>
GNSS Type	<i>GPS</i>
GPS Message Types	<i>RMC</i>
SBAS	<i>Enable</i>
Assisted GPS	<i>Enable, 1</i>
Data to Storage	<i>Disable</i>

### Settings for Remote Host:

Configuration Path	[GNSS]-[Remote Host Configuration]
Host Name	<i>Truck-1</i>
Host IP	<i>100.100.100.1</i>
Protocol Type	<i>TCP</i>
Port Number	<i>888</i>
Interval(s)	<i>15</i>
Prefix Message	<i>123456789012345</i>
Suffix Message	<i>[blank]</i>
Enable Checkbox	<i>[Checked]</i>

# M2M Cellular Gateway

## GNSS Setting

Go to Service > Location Tracking > GNSS Tab.

The GNSS allows user to set the configuration of GNSS, log NMEA data to storage, and send data to remote host. Ensure GNSS is enabled and saved

### Setup GNSS Configuration

Configuration	
Item	Setting
▶ GNSS	<input type="checkbox"/> Enable
▶ GNSS Type	GPS ▾
▶ GNSS Message Types	<input type="checkbox"/> GGA <input type="checkbox"/> GLL <input type="checkbox"/> GSA <input type="checkbox"/> GSV <input type="checkbox"/> RMC <input type="checkbox"/> VTG
▶ SBAS	<input checked="" type="checkbox"/> Enable
▶ Assisted GPS	<input checked="" type="checkbox"/> Enable 1 ▾ day Differential Almanac Corrections
▶ Data to Storage	<input type="checkbox"/> Enable    Select Device: Internal ▾ Interval: 5 (s) Data format: GPX ▾ Data file name: GPX_YYYYMMDDHHMM Split file: <input type="checkbox"/> Enable    Size: 200 KB ▾ <input type="button" value="Download log file"/>

GNSS Configuration		
Item	Value setting	Description
<b>GNSS Enable</b>	The box is unchecked by default	Check <b>Enable</b> box to activate GNSS functions.
<b>GNSS Type</b>	<b>GPS</b> is selected by default	Select a <b>GNSS Type</b> (GNSS System) that you want to use. Please note this option is hardware dependent. The available options of GNSS type show on this page is according to product specification. You may not see all of these four options if your product doesn't support all of them.
<b>GNSS Message Types</b>	These box is unchecked by default.	Select one or more <b>GNSS Message Types</b> that you want to use for transmitting or recording GPS data. There are many sentences in the NMEA standard for selecting, <b>GGA, GLL, GSA, GSV, RMC and VTG</b> . <b>ALL Other</b> includes DTM, GNS, GRS, GST, ZDA, and GBS sentences. Only select the type you need, otherwise it will consume unnecessary network bandwidth.
<b>SBAS</b>	The box is unchecked by default	Check <b>Enable</b> box to activate satellite-based augmentation system ( <b>SBAS</b> ). Note: Some devices do not support this function.

# M2M Cellular Gateway

<b>Assisted GPS</b>	The box is checked by default	Check <b>Enable</b> box to activate Assisted GPS (A-GPS). Select the duration for downloading the <b>Differential Almanac Corrections</b> data from A-GPS server through IP network. Note: Some devices may not support this function.
<b>Data to Storage</b>	The box is unchecked by default	<ul style="list-style-type: none"> <li>● <b>Enable</b> (The box is unchecked by default) Check <b>Enable</b> box to activate data to storage function.</li> <li>● <b>Select Device</b> (A Must filled setting) Select <b>Internal</b> or <b>External</b> device to store log data.</li> <li>● <b>Interval</b> (A Must filled setting) Specify the time interval between two continuous data log. By default, 5 second is set. <i>Value Range: 5 ~ 60 seconds.</i></li> <li>● <b>Data Format</b> (A Must filled setting) Select data format (<b>RAW</b>, or <b>GPX</b>) to store.</li> <li>● <b>Data file name</b>(A Must filled setting) Define file name to store.</li> <li>● <b>Split Enable</b> Check <b>Enable</b> box to activate file splitting function.</li> <li>● <b>Split Size&amp; Unit</b> Define file size and unit for log file. By default, 200 KB is defined. <i>Value Range: &gt;= 10KB (Minimum file size is 10 KB).</i></li> <li>● <b>Download log file</b> Select a log file and Click <b>Download log file</b> to download through Web GUI. If the log format which is specified to download is GPX, we will convert standard GPX format for used.</li> </ul>
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration

## Create / Edit Remote Host

The Remote Host allows you to customize your rules for sending NMEA data to specific IP address and Port. The router supports up to a maximum of 10 rule sets.

Remote Host List									
ID	Host Name	Host IP	Protocol Type	Port Number	Interval(s)	Prefix Message	Suffix Message	Enable	Actions
<input type="button" value="Add"/> <input type="button" value="Delete"/>									

When **Add** button is applied, **Remote Host Configuration** screen will appear.

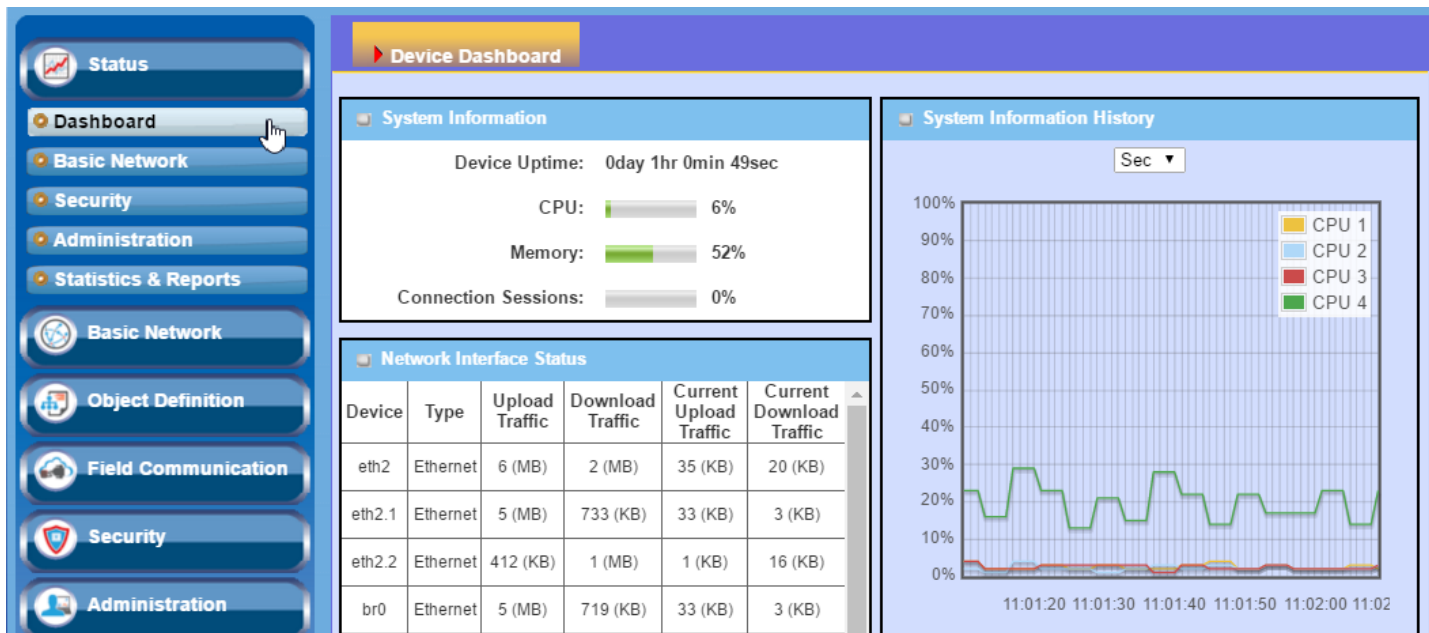

# M2M Cellular Gateway

Remote Host Configuration	
Item	Setting
▶ Host Name	<input type="text"/>
▶ Host IP	<input type="text"/>
▶ Protocol Type	TCP ▼
▶ Port Number	<input type="text"/>
▶ Interval(s)	<input type="text" value="1"/>
▶ Prefix Message	<input type="text"/>
▶ Suffix Message	<input type="text"/>
▶ Enable	<input type="checkbox"/>

Remote Host Configuration		
Item	Value setting	Description
<b>Host Name</b>	String format: any text	Enter the host name for the designated remote host. <b>Value Range:</b> -1 ~ 64 characters.
<b>Host IP</b>	A Must filled setting	Specify the <b>IP Address</b> of remote host. It will be use as destination IP for sending NMEA packets.
<b>Protocol Type</b>	TCP is selected by default	Specify the <b>Protocol (TCP or UDP)</b> to use for sending NMEA packets.
<b>Port Number</b>	A Must filled setting	Specify a <b>Port Number</b> as destination port for sending NMEA packets. <b>Value Range:</b> 1 ~ 65535.
<b>Interval(s)</b>	A Must filled setting	Specify the time <b>interval</b> (seconds) between two NMEA packets. <b>Value Range:</b> 1 ~255 seconds.
<b>Prefix Message</b>	String format: any text	Specify optional prefix string with specific information if your backend server can recognize. For example, you can input the IMEI code of this device here, and then your backend server can recognize this GPS data is sent from this device. You can also leave this field blank.
<b>Suffix Message</b>	String format: any text	Specify optional suffix string with specific information if your backend server can recognize.
<b>Enable</b>	The box is unchecked by default	Check <b>Enable</b> box to activate this remote host rule.
<b>Save</b>	NA	Click the <b>Save</b> button to save the configuration

## Chapter 8 Status

### 8.1 Dashboard

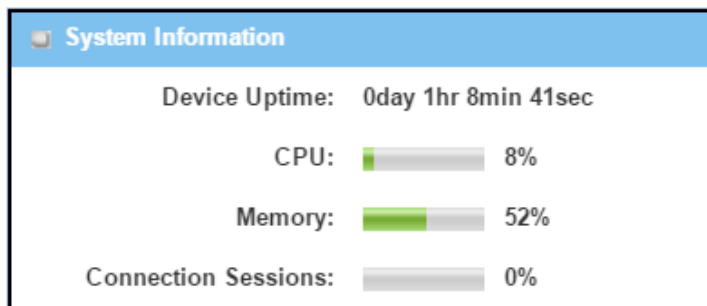

#### 8.1.1 Device Dashboard

The **Device Dashboard** window shows the current status in graph or tables for quickly understanding the operation status for the gateway. They are the System Information, System Information History, and Network Interface Status. The display will be refreshed once per second.

From the menu on the left, select **Status > Dashboard > Device Dashboard** tab.

#### System Information Status

The **System Information** screen shows the device Up-time and the resource utilization for the CPU, Memory, and Connection Sessions.

# M2M Cellular Gateway

## System Information History

The **System Information History** screen shows the statistic graphs for the CPU and memory.

## Network Interface Status

The **Network Interface Status** screen shows the statistic information for each network interface of the gateway. The statistic information includes the Interface Type, Upload Traffic, Download Traffic, and Current Upload / Download Traffic.

Device	Type	Upload Traffic	Download Traffic	Current Upload Traffic	Current Download Traffic
eth2	Ethernet	27 (MB)	15 (MB)	35 (KB)	19 (KB)
eth2.1	Ethernet	26 (MB)	2 (MB)	34 (KB)	3 (KB)
eth2.2	Ethernet	1 (MB)	12 (MB)	1 (KB)	15 (KB)
br0	Ethernet	26 (MB)	2 (MB)	33 (KB)	3 (KB)
ra0	Wireless LAN	0 (Bytes)	0 (Bytes)	0 (Bytes)	0 (Bytes)
rai0	Wireless LAN	0 (Bytes)	0 (Bytes)	0 (Bytes)	0 (Bytes)
ra7	Wireless LAN	0 (Bytes)	0 (Bytes)	0 (Bytes)	0 (Bytes)
	Wireless				

# M2M Cellular Gateway

## 8.2 Basic Network

### 8.2.1 WAN & Uplink Status

Go to **Status > Basic Network > WAN & Uplink** tab.

The **WAN & Uplink Status** window shows the current status for different network type, including network configuration, connecting information, modem status and traffic statistics. The display will be refreshed on every five seconds.

#### WAN interface IPv4 Network Status

**WAN interface IPv4 Network Status** screen shows status information for IPv4 network.

WAN Interface IPv4 Network Status										
ID	Interface	WAN Type	Network Type	IP Addr.	Subnet Mask	Gateway	DNS	MAC Address	Conn. Status	Action
WAN-1	3G/4G	3G/4G	NAT	0.0.0.0	0.0.0.0	0.0.0.0	0.0.0.0, 0.0.0.0	N/A	Disconnected	Edit
WAN-2		Disable								Edit

WAN interface IPv4 Network Status		
Item	Value setting	Description
<b>ID</b>	N/A	It displays corresponding WAN interface WAN IDs.
<b>Interface</b>	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
<b>WAN Type</b>	N/A	It displays the method which public IP address is obtained from your ISP. Depending on the model purchased, it can be Static IP, Dynamic IP, PPPoE, PPTP, L2TP, 3G/4G.
<b>Network Type</b>	N/A	It displays the network type for the WAN interface(s). Depending on the model purchased, it can be NAT, Routing, Bridge, or IP Pass-through.
<b>IP Addr.</b>	N/A	It displays the public IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
<b>Subnet Mask</b>	N/A	It displays the Subnet Mask for public IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
<b>Gateway</b>	N/A	It displays the Gateway IP address obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
<b>DNS</b>	N/A	It displays the IP address of DNS server obtained from your ISP for Internet connection. Default value is 0.0.0.0 if left unconfigured.
<b>MAC Address</b>	N/A	It displays the MAC Address for your ISP to allow you for Internet access. Note: Not all ISP may require this field.
<b>Conn. Status</b>	N/A	It displays the connection status of the device to your ISP.

# M2M Cellular Gateway

		Status are Connected or disconnected.
		This area provides functional buttons.
		<b>Renew</b> button allows user to force the device to request an IP address from the DHCP server. Note: <b>Renew</b> button is available when DHCP WAN Type is used and WAN connection is disconnected.
		<b>Release</b> button allows user to force the device to clear its IP address setting to disconnect from DHCP server. Note: <b>Release</b> button is available when DHCP WAN Type is used and WAN connection is connected.
<b>Action</b>	N/A	<p><b>Connect</b> button allows user to manually connect the device to the Internet. Note: Connect button is available when Connection Control in WAN Type setting is set to Connect Manually (Refer to <b>Edit</b> button in <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup</b>) and WAN connection status is disconnected.</p> <p><b>Disconnect</b> button allows user to manually disconnect the device from the Internet. Note: <b>Connect</b> button is available when Connection Control in WAN Type setting is set to Connect Manually (Refer to <b>Edit</b> button in <b>Basic Network &gt; WAN &amp; Uplink &gt; Internet Setup</b>) and WAN connection status is connected.</p>

## WAN interface IPv6 Network Status

WAN interface IPv6 Network Status screen shows status information for IPv6 network.

WAN Interface IPv6 Network Status						
ID	Interface	WAN Type	Link-local IP Address	Global IP Address	Conn. Status	Action
WAN-1	Ethernet	DHCPv6	fe80::250:18ff:fe16:1121	/64	Disconnected	Connect Edit

WAN interface IPv6 Network Status		
Item	Value setting	Description
<b>ID</b>	N/A	It displays corresponding WAN interface WAN IDs.
<b>Interface</b>	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
<b>WAN Type</b>	N/A	It displays the method which public IP address is obtained from your ISP. WAN type setting can be changed from <b>Basic Network &gt; IPv6 &gt; Configuration</b> .
<b>Link-local IP Address</b>	N/A	It displays the LAN IPv6 Link-Local address.
<b>Global IP Address</b>	N/A	It displays the IPv6 global IP address assigned by your ISP for your Internet connection.
<b>Conn. Status</b>	N/A	It displays the connection status. The status can be connected, disconnected and connecting.
<b>Action</b>	N/A	This area provides functional buttons.

# M2M Cellular Gateway

**Edit Button** when pressed, web-based utility will take you to the IPv6 configuration page. (**Basic Network > IPv6 > Configuration.**)

## LAN Interface Network Status

**LAN Interface Network Status** screen shows IPv4 and IPv6 information of LAN network.

LAN Interface Network Status					
IPv4 Address	IPv4 Subnet Mask	IPv6 Link-local Address	IPv6 Global Address	MAC Address	Action
192.168.123.254	255.255.255.0	fe80::250:18ff:fe00:ffe	/64	00:50:18:00:0F:FE	<input type="button" value="Edit IPv4"/> <input type="button" value="Edit IPv6"/>

LAN Interface Network Status		
Item	Value setting	Description
<b>IPv4 Address</b>	N/A	It displays the current IPv4 IP Address of the gateway This is also the IP Address user use to access Router's Web-based Utility.
<b>IPv4 Subnet Mask</b>	N/A	It displays the current mask of the subnet.
<b>IPv6 Link-local Address</b>	N/A	It displays the current LAN IPv6 Link-Local address. This is also the IPv6 IP Address user use to access Router's Web-based Utility.
<b>IPv6 Global Address</b>	N/A	It displays the current IPv6 global IP address assigned by your ISP for your Internet connection.
<b>MAC Address</b>	N/A	It displays the LAN MAC Address of the gateway
<b>Action</b>	N/A	This area provides functional buttons. <b>Edit IPv4 Button</b> when press, web-based utility will take you to the Ethernet LAN configuration page. ( <b>Basic Network &gt; LAN &amp; VLAN &gt; Ethernet LAN</b> tab). <b>Edit IPv6 Button</b> when press, web-based utility will take you to the IPv6 configuration page. ( <b>Basic Network &gt; IPv6 &gt; Configuration.</b> )

## 3G/4G Modem Status

**3G/4G Modem Status List** screen shows status information for 3G/4G WAN network(s).

3G/4G Modem Status List <input type="button" value="Refresh"/>					
Interface	Card Information	Link Status	Signal Strength	Network Name	Action
3G/4G	ME3620-J	Disconnected	N/A		<input type="button" value="Detail"/>

3G/4G Modem Status List		
Item	Value setting	Description
<b>Physical Interface</b>	N/A	It displays the type of WAN physical interface. Note: Some device model may support two 3G/4G modules. Their physical interface

# M2M Cellular Gateway

		name will be <b>3G/4G-1</b> and <b>3G/4G-2</b> .
<b>Card Information</b>	N/A	It displays the vendor's 3G/4G modem model name.
<b>Link Status</b>	N/A	It displays the 3G/4G connection status. The status can be Connecting, Connected, Disconnecting, and Disconnected.
<b>Signal Strength</b>	N/A	It displays the 3G/4G wireless signal level.
<b>Network Name</b>	N/A	It displays the name of the service network carrier.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to renew the information.
<b>Action</b>	N/A	This area provides functional buttons. <b>Detail Button</b> when press, windows of detail information will appear. They are the Modem Information, SIM Status, and Service Information. Refer to next page for more.

When the **Detail** button is pressed, 3G/4G modem information windows such as Modem Information, SIM Status, Service Information, Signal Strength / Quality, and Error Message will appear.

## Interface Traffic Statistics

Interface Traffic Statistics screen displays the Interface's total transmitted packets.

Interface Traffic Statistics			
ID	Interface	Received Packets(Mb)	Transmitted Packets(Mb)
WAN-1	3G/4G	0	0
WAN-2		-	-

Interface Traffic Statistics		
Item	Value setting	Description
<b>ID</b>	N/A	It displays corresponding WAN interface WAN IDs.
<b>Interface</b>	N/A	It displays the type of WAN physical interface. Depending on the model purchased, it can be Ethernet, 3G/4G, etc...
<b>Received Packets (Mb)</b>	N/A	It displays the downstream packets (Mb). It is reset when the device is rebooted.
<b>Transmitted Packets (Mb)</b>	N/A	It displays the upstream packets (Mb). It is reset when the device is rebooted.

# M2M Cellular Gateway

## 8.2.2 LAN & VLAN Status

Go to **Status > Basic Network > LAN & VLAN** tab.

### Client List

The **Client List** shows you the LAN Interface, IP address, Host Name, MAC Address, and Remaining Lease Time of each device that is connected to this gateway. The display will be refreshed on every five seconds.

LAN Client List				
LAN Interface	IP Address	Host Name	MAC Address	Remaining Lease Time
Ethernet	Dynamic / 192.168.1.100	amit-25611230-1	00-01-0A-10-0F-17	23:59:51

LAN Client List		
Item	Value setting	Description
<b>LAN Interface</b>	N/A	Client record of LAN Interface. String Format.
<b>IP Address</b>	N/A	Client record of IP Address Type and the IP Address. Type is String Format and the IP Address is IPv4 Format.
<b>Host Name</b>	N/A	Client record of Host Name. String Format.
<b>MAC Address</b>	N/A	Client record of MAC Address. MAC Address Format.
<b>Remaining Lease Time</b>	N/A	Client record of Remaining Lease Time. Time Format.

# M2M Cellular Gateway

---

## 8.2.3 WiFi Status (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 8.2.4 DDNS Status

Go to **Status > Basic Network > DDNS** tab.

The **DDNS Status** window shows the current DDNS service in use, the last update status, and the last update time to the DDNS service server.

### DDNS Status

DDNS Status List				
Host Name	Provider	Effective IP	Last Update Status	Last Update Time

DDNS Status		
Item	Value Setting	Description
<b>Host Name</b>	N/A	It displays the name you entered to identify DDNS service provider
<b>Provider</b>	N/A	It displays the DDNS server of DDNS service provider
<b>Effective IP</b>	N/A	It displays the public IP address of the device updated to the DDNS server
<b>Last Update Status</b>	N/A	It displays whether the last update of the device public IP address to the DDNS server has been successful (Ok) or failed (Fail).
<b>Last Update Time</b>	N/A	It displays time stamp of the last update of public IP address to the DDNS server.
<b>Refresh</b>	N/A	The <b>refresh</b> button allows user to force the display to refresh information.

# M2M Cellular Gateway

## 8.3 Security

### 8.3.1 VPN Status

Go to **Status > Security > VPN** tab.

The **VPN Status** window shows the overall VPN tunnel status. The display will be refreshed on every five seconds.

#### IPSec Tunnel Status

**IPSec Tunnel Status** windows show the configuration for establishing IPSec VPN connection and current connection status.

IPSec Tunnel Status <span>Edit</span>						
Tunnel Name	Tunnel Scenario	Local Subnets	Remote IP/FQDN	Remote Subnets	Conn. Time	Status

Item	Value setting	Description
<b>Tunnel Name</b>	N/A	It displays the tunnel name you have entered to identify.
<b>Tunnel Scenario</b>	N/A	It displays the Tunnel Scenario specified.
<b>Local Subnets</b>	N/A	It displays the Local Subnets specified.
<b>Remote IP/FQDN</b>	N/A	It displays the Remote IP/FQDN specified.
<b>Remote Subnets</b>	N/A	It displays the Remote Subnets specified.
<b>Conn. Time</b>	N/A	It displays the connection time for the IPSec tunnel.
<b>Status</b>	N/A	It displays the Status of the VPN connection. The status displays are Connected, Disconnected, Wait for traffic, and Connecting.

# M2M Cellular Gateway

<b>Edit Button</b>	N/A	Click on Edit Button to change IPSec setting, web-based utility will take you to the IPSec configuration page. ( <b>Security &gt; VPN &gt; IPSec</b> tab)
--------------------	-----	---

## OpenVPN Server Status

According to OpenVPN configuration, the **OpenVPN Server/Client Status** shows the status and statistics for the OpenVPN connection from the server side or client side.

OpenVPN Server Status		Edit		
User Name	Remote IP/FQDN	Virtual IP/Mac	Conn. Time	Status
<b>OpenVPN Server Status</b>				
Item	Value setting	Description		
<b>User Name</b>	N/A	It displays the Client name you have entered for identification.		
<b>Remote IP/FQDN</b>	N/A	It displays the public IP address (the WAN IP address) of the connected OpenVPN Client		
<b>Virtual IP/MAC</b>	N/A	It displays the virtual IP/MAC address assigned to the connected OpenVPN client.		
<b>Conn. Time</b>	N/A	It displays the connection time for the corresponding OpenVPN tunnel.		
<b>Status</b>	N/A	It displays the connection status of the corresponding OpenVPN tunnel. The status can be Connected, or Disconnected.		

## OpenVPN Client Status

OpenVPN Client Status										Edit
OpenVPN Client Name	Interface	Remote IP/FQDN	Remote Subnet	TUN/TAP Read(bytes)	TUN/TAP Write(bytes)	TCP/UDP Read(bytes)	TCP/UDP Write(bytes)	Conn. Time	Conn. Status	
<b>OpenVPN Client Status</b>										
Item	Value setting	Description								
<b>OpenVPN Client Name</b>	N/A	It displays the Client name you have entered for identification.								
<b>Interface</b>	N/A	It displays the WAN interface specified for the OpenVPN client connection.								
<b>Remote IP/FQDN</b>	N/A	It displays the peer OpenVPN Server's Public IP address (the WAN IP address) or FQDN.								
<b>Remote Subnet</b>	N/A	It displays the Remote Subnet specified.								
<b>TUN/TAP Read(bytes)</b>	N/A	It displays the TUN/TAP Read Bytes of OpenVPN Client.								
<b>TUN/TAP Write(bytes)</b>	N/A	It displays the TUN/TAP Write Bytes of OpenVPN Client.								
<b>TCP/UDP Read(bytes)</b>	N/A	It displays the TCP/UDP Read Bytes of OpenVPN Client.								
<b>TCP/UDP Write(bytes)</b>	N/A	It displays the TCP/UDP Write Bytes of OpenVPN Client. Connection								
<b>Conn. Time</b>	N/A	It displays the connection time for the corresponding OpenVPN tunnel.								
<b>Conn. Status</b>	N/A	It displays the connection status of the corresponding OpenVPN tunnel. The status can be Connected, or Disconnected.								

# M2M Cellular Gateway

## L2TP Server/Client Status

L2TP Server/Client Status shows the configuration for establishing L2TP tunnel and current connection status.

L2TP Server Status <span>Edit</span>					
User Name	Remote IP	Remote Virtual IP	Remote Call ID	Conn. Time	Status
<b>L2TP Server Status</b>					
Item	Value setting	Description			
User Name	N/A	It displays the login name of the user used for the connection.			
Remote IP	N/A	It displays the public IP address (the WAN IP address) of the connected L2TP client.			
Remote Virtual IP	N/A	It displays the IP address assigned to the connected L2TP client.			
Remote Call ID	N/A	It displays the L2TP client Call ID.			
Conn. Time	N/A	It displays the connection time for the L2TP tunnel.			
Status	N/A	It displays the Status of each of the L2TP client connection. The status displays Connected, Disconnect, Connecting			
Edit	N/A	Click on <b>Edit</b> Button to change L2TP server setting, web-based utility will take you to the L2TP server page. ( <b>Security &gt; VPN &gt; L2TP</b> tab)			

L2TP Client Status <span>Edit</span>							
L2TP Client Name	Interface	Virtual IP	Remote IP/FQDN	Default Gateway/Remote Subnet	Conn. Time	Status	
<b>L2TP Client Status</b>							
Item	Value setting	Description					
Client Name	N/A	It displays Name for the L2TP Client specified.					
Interface	N/A	It displays the WAN interface with which the gateway will use to request PPTP tunneling connection to the PPTP server.					
Virtual IP	N/A	It displays the IP address assigned by Virtual IP server of L2TP server.					
Remote IP/FQDN	N/A	It displays the L2TP Server's Public IP address (the WAN IP address) or FQDN.					
Default Gateway/Remote Subnet	N/A	It displays the specified IP address of the gateway device used to connect to the internet to connect to the L2TP server –the default gateway. Or other specified subnet if the default gateway is not used to connect to the L2TP server –the remote subnet.					
Conn. Time	N/A	It displays the connection time for the L2TP tunnel.					
Status	N/A	It displays the Status of the VPN connection. The status displays Connected, Disconnect, and Connecting.					
Edit	N/A	Click on <b>Edit</b> Button to change L2TP client setting, web-based utility will take you to the L2TP client page. ( <b>Security &gt; VPN &gt; L2TP</b> tab)					

# M2M Cellular Gateway

## PPTP Server/Client Status

PPTP Server/Client Status shows the configuration for establishing PPTP tunnel and current connection status.

PPTP Server Status <span>Edit</span>					
User Name	Remote IP	Remote Virtual IP	Remote Call ID	Conn. Time	Status

PPTP Server Status		
Item	Value setting	Description
User Name	N/A	It displays the login name of the user used for the connection.
Remote IP	N/A	It displays the public IP address (the WAN IP address) of the connected PPTP client.
Remote Virtual IP	N/A	It displays the IP address assigned to the connected PPTP client.
Remote Call ID	N/A	It displays the PPTP client Call ID.
Conn. Time	N/A	It displays the connection time for the PPTP tunnel.
Status	N/A	It displays the Status of each of the PPTP client connection. The status displays Connected, Disconnect, and Connecting.
Edit Button	N/A	Click on <b>Edit</b> Button to change PPTP server setting, web-based utility will take you to the PPTP server page. ( <b>Security &gt; VPN &gt; PPTP</b> tab)

PPTP Client Status <span>Edit</span>						
PPTP Client Name	Interface	Virtual IP	Remote IP/FQDN	Default Gateway/Remote Subnet	Conn. Time	Status

PPTP Client Status		
Item	Value setting	Description
Client Name	N/A	It displays Name for the PPTP Client specified.
Interface	N/A	It displays the WAN interface with which the gateway will use to request PPTP tunneling connection to the PPTP server.
Virtual IP	N/A	It displays the IP address assigned by Virtual IP server of PPTP server.
Remote IP/FQDN	N/A	It displays the PPTP Server's Public IP address (the WAN IP address) or FQDN.
Default Gateway / Remote Subnet	N/A	It displays the specified IP address of the gateway device used to connect to the internet to connect to the PPTP server –the default gateway. Or other specified subnet if the default gateway is not used to connect to the PPTP server –the remote subnet.
Conn. Time	N/A	It displays the connection time for the PPTP tunnel.
Status	N/A	It displays the Status of the VPN connection. The status displays Connected, Disconnect, and Connecting.
Edit Button	N/A	Click on <b>Edit</b> Button to change PPTP client setting, web-based utility will take you to the PPTP server page. ( <b>Security &gt; VPN &gt; PPTP</b> tab)

# M2M Cellular Gateway

## 8.3.2 Firewall Status

Go to **Status > Security > Firewall Status** Tab.

The **Firewall Status** provides user a quick view of the firewall status and current firewall settings. It also keeps the log history of the dropped packets by the firewall rule policies, and includes the administrator remote login settings specified in the Firewall Options. The display will be refreshed on every five seconds.

By clicking the icon [+], the status table will be expanded to display log history. Clicking the **Edit** button the screen will be switched to the configuration page.

### Packet Filter Status

Packet Filters <span>Edit</span> <span>[+]</span>			
Activated Filter Rule	Detected Contents	IP	Time

Packet Filter Status		
Item	Value setting	Description
Activated Filter Rule	N/A	This is the Packet Filter Rule name.
Detected Contents	N/A	This is the logged packet information, including the source IP, destination IP, protocol, and destination port –the TCP or UDP. String format: Source IP to Destination IP : Destination Protocol (TCP or UDP)
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

*Note: Ensure Packet Filter Log Alert is enabled.*

*Refer to **Security > Firewall > Packet Filter** tab. Check Log Alert and save the setting.*

### URL Blocking Status

URL Blocking <span>Edit</span> <span>[+]</span>			
Activated Blocking Rule	Blocked URL	IP	Time

URL Blocking Status		
Item	Value setting	Description
Activated Blocking Rule	N/A	This is the URL Blocking Rule name.

# M2M Cellular Gateway

<b>Blocked URL</b>	N/A	This is the logged packet information.
<b>IP</b>	N/A	The Source IP (IPv4) of the logged packet.
<b>Time</b>	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

*Note: Ensure URL Blocking Log Alert is enabled.*

*Refer to **Security > Firewall > URL Blocking** tab. Check Log Alert and save the setting.*

## Web Content Filter Status

Web Content Filters <span>Edit</span> <span>[ + ]</span>			
Activated Filter Rule	Detected Contents		Time
<b>Web Content Filter Status</b>			
Item	Value setting	Description	
<b>Activated Filter Rule</b>	N/A	Logged packet of the rule name. String format.	
<b>Detected Contents</b>	N/A	Logged packet of the filter rule. String format.	
<b>IP</b>	N/A	Logged packet of the Source IP. IPv4 format.	
<b>Time</b>	N/A	Logged packet of the Date Time. Date time format ("Month" "Day" "Hours":"Minutes":"Seconds")	

*Note: Ensure Web Content Filter Log Alert is enabled.*

*Refer to **Security > Firewall > Web Content Filter** tab. Check Log Alert and save the setting.*

# M2M Cellular Gateway

## MAC Control Status

MAC Control <span>Edit</span> <span>[+]</span>			
Activated Control Rule	Blocked MAC Addresses	IP	Time

MAC Control Status		
Item	Value setting	Description
Activated Control Rule	N/A	This is the MAC Control Rule name.
Blocked MAC Addresses	N/A	This is the MAC address of the logged packet.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure MAC Control Log Alert is enabled.

Refer to **Security > Firewall > MAC Control** tab. Check Log Alert and save the setting.

## Application Filters Status

Application Filters <span>Edit</span> <span>[+]</span>			
Filtered Application Category	Filtered Application Name	IP	Time

Application Filters Status		
Item	Value setting	Description
Filtered Application Category	N/A	The name of the Application Category being blocked.
Filtered Application Name	N/A	The name of the Application being blocked.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure Application Filter Log Alert is enabled.

Refer to **Security > Firewall > Application Filter** tab. Check Log Alert and save the setting.

# M2M Cellular Gateway

## IPS Status

IPS <span>Edit</span> <span>[+]</span>		
Detected Intrusion	IP	Time

IPS Firewall Status		
Item	Value setting	Description
Detected Intrusion	N/A	This is the intrusion type of the packets being blocked.
IP	N/A	The Source IP (IPv4) of the logged packet.
Time	N/A	The Date and Time stamp of the logged packet. Date & time format. ("Month" "Day" "Hours":"Minutes":"Seconds")

Note: Ensure IPS Log Alert is enabled.

Refer to **Security > Firewall > IPS** tab. Check Log Alert and save the setting.

## Firewall Options Status

Options <span>Edit</span> <span>[+]</span>			
Stealth Mode	SPI	Discard Ping from WAN	Remote Administrator Management

Firewall Options Status		
Item	Value setting	Description
Stealth Mode	N/A	Enable or Disable setting status of Stealth Mode on Firewall Options. String Format: Disable or Enable
SPI	N/A	Enable or Disable setting status of SPI on Firewall Options. String Format : Disable or Enable
Discard Ping from WAN	N/A	Enable or Disable setting status of Discard Ping from WAN on Firewall Options. String Format: Disable or Enable
Remote Administrator Management	N/A	Enable or Disable setting status of Remote Administrator. If Remote Administrator is enabled, it shows the currently logged in administrator's source IP address and login user name and the login time. Format: IP : "Source IP", User Name: "Login User Name", Time: "Date time" Example: IP: 192.168.127.39, User Name: admin, Time: Mar 3 01:34:13

Note: Ensure Firewall Options Log Alert is enabled.

Refer to **Security > Firewall > Options** tab. Check Log Alert and save the setting.

# M2M Cellular Gateway

## 8.4 Administration

### 8.4.1 Configure & Manage Status

Go to **Status > Administration > Configure & Manage** tab.

The **Configure & Manage Status** window shows the status for managing remote network devices. The type of management available in your device is depended on the device model purchased. The commonly used ones are the SNMP, TR-069, and UPnP. The display will be refreshed on every five seconds.

#### SNMP Linking Status

**SNMP Link Status** screen shows the status of current active SNMP connections.

SNMP Linking Status						
User Name	IP Address	Port	Community	Auth. Mode	Privacy Mode	SNMP Version

SNMP Link Status		
Item	Value setting	Description
User Name	N/A	It displays the user name for authentication. This is only available for SNMP version 3.
IP Address	N/A	It displays the IP address of SNMP manager.
Port	N/A	It displays the port number used to maintain connection with the SNMP manager.
Community	N/A	It displays the community for SNMP version 1 or version 2c only.
Auth. Mode	N/A	It displays the authentication method for SNMP version 3 only.
Privacy Mode	N/A	It displays the privacy mode for version 3 only.
SNMP Version	N/A	It displays the SNMP Version employed.

#### SNMP Trap Information

**SNMP Trap Information** screen shows the status of current received SNMP traps.

SNMP Trap Information		
Trap Level	Time	Trap Event

SNMP Trap Information		
Item	Value setting	Description
Trap Level	N/A	It displays the trap level.
Time	N/A	It displays the timestamp of trap event.

# M2M Cellular Gateway

<b>Trap Event</b>	N/A	It displays the IP address of the trap sender and event type.
-------------------	-----	---

## TR-069 Status

**TR-069 Status** screen shows the current connection status with the TR-068 server.

<b>TR-069 Status</b>
<b>Link Status</b>
Off

TR-069 Status Item	Value setting	Description
<b>Link Status</b>	N/A	It displays the current connection status with the TR-068 server. The connection status is either On when the device is connected with the TR-068 server or Off when disconnected.

# M2M Cellular Gateway

---

## 8.4.2 Log Storage Status

Go to **Status > Administration > Log Storage** tab.

The **Log Storage Status** screen shows the status for selected device storage.

### Log Storage Status

**Log Storage Status** screen shows the status of current the selected device storage. The status includes Device Select, Device Description, Usage, File System, Speed, and status

Storage Information					
Device Select	Device Description	Usage	File System	Speed	Status
Storage 1 ▼	USB Storage	0 / 3788 MB	FAT/FAT32	USB 2.0	Ready

# M2M Cellular Gateway

---

## 8.4.3 GNSS Status

Go to **Status > Administration > GNSS** tab.

The **GNSS Information** screen shows the status for current GNSS positioning information for the gateway.

GNSS Information						
Condition	No. of Satellites	Satellites ID / Signal Strength (dBm)	Position (Lat, Long)	Altitude (meters)	True Course	Ground Speed (km/h)
Not Fixed						

The available GNSS information includes GNSS Condition, No. of Satellites, Satellites ID / Signal Strength, Position (Lat., Long.), Altitude (meters), True Course, and the equivalent Ground Speed (km/h).

# M2M Cellular Gateway

## 8.5 Statistics & Report

### 8.5.1 Connection Session

Go to **Status > Statistics & Reports > Connection Session** tab.

**Internet Surfing Statistic** shows the connection tracks on this router.

Internet Surfing List (33 entries) <a href="#">Previous</a> <a href="#">Next</a> <a href="#">First</a> <a href="#">Last</a> <a href="#">Export (.xml)</a> <a href="#">Export (.csv)</a> <a href="#">Refresh</a>					
User Name	Protocol	Internal IP & Port	MAC	External IP &Port	Duration Time
	UDP	192.168.123.100:51736		192.168.123.254:53	2017/03/22 03:43~
	UDP	192.168.123.100:55986		192.168.123.254:53	2017/03/22 03:43~
	UDP	192.168.123.100:49548		192.168.123.254:53	2017/03/22 03:43~
	UDP	192.168.123.100:60969		192.168.123.254:53	2017/03/22 03:43~
	UDP	192.168.123.100:56053		192.168.123.254:53	2017/03/22 03:43~

Internet Surfing Statistic		
Item	Value setting	Description
<b>Previous</b>	N/A	Click the <b>Previous</b> button; you will see the previous page of track list.
<b>Next</b>	N/A	Click the <b>Next</b> button; you will see the next page of track list.
<b>First</b>	N/A	Click the <b>First</b> button; you will see the first page of track list.
<b>Last</b>	N/A	Click the <b>Last</b> button; you will see the last page of track list.
<b>Export (.xml)</b>	N/A	Click the <b>Export (.xml)</b> button to export the list to xml file.
<b>Export (.csv)</b>	N/A	Click the <b>Export (.csv)</b> button to export the list to csv file.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the list.

# M2M Cellular Gateway

---

## 8.5.2 Network Traffic (not supported)

Not supported feature for the purchased product, leave it as blank.

# M2M Cellular Gateway

## 8.5.3 Device Administration

Go to **Status > Statistics & Reports > Device Administration** tab.

**Device Administration** shows the login information.

Device Manager Login Statistics				
User Name	Protocol Type	IP Address	User Level	Duration Time
admin	http/https	192.168.123.100	Admin	2017/03/22 03:31~

Device Manager Login Statistic		
Item	Value setting	Description
<b>Previous</b>	N/A	Click the <b>Previous</b> button; you will see the previous page of login statistics.
<b>Next</b>	N/A	Click the <b>Next</b> button; you will see the next page of login statistics.
<b>First</b>	N/A	Click the <b>First</b> button; you will see the first page of login statistics.
<b>Last</b>	N/A	Click the <b>Last</b> button; you will see the last page of login statistics.
<b>Export (.xml)</b>	N/A	Click the <b>Export (.xml)</b> button to export the login statistics to xml file.
<b>Export (.csv)</b>	N/A	Click the <b>Export (.csv)</b> button to export the login statistics to csv file.
<b>Refresh</b>	N/A	Click the <b>Refresh</b> button to refresh the login statistics.

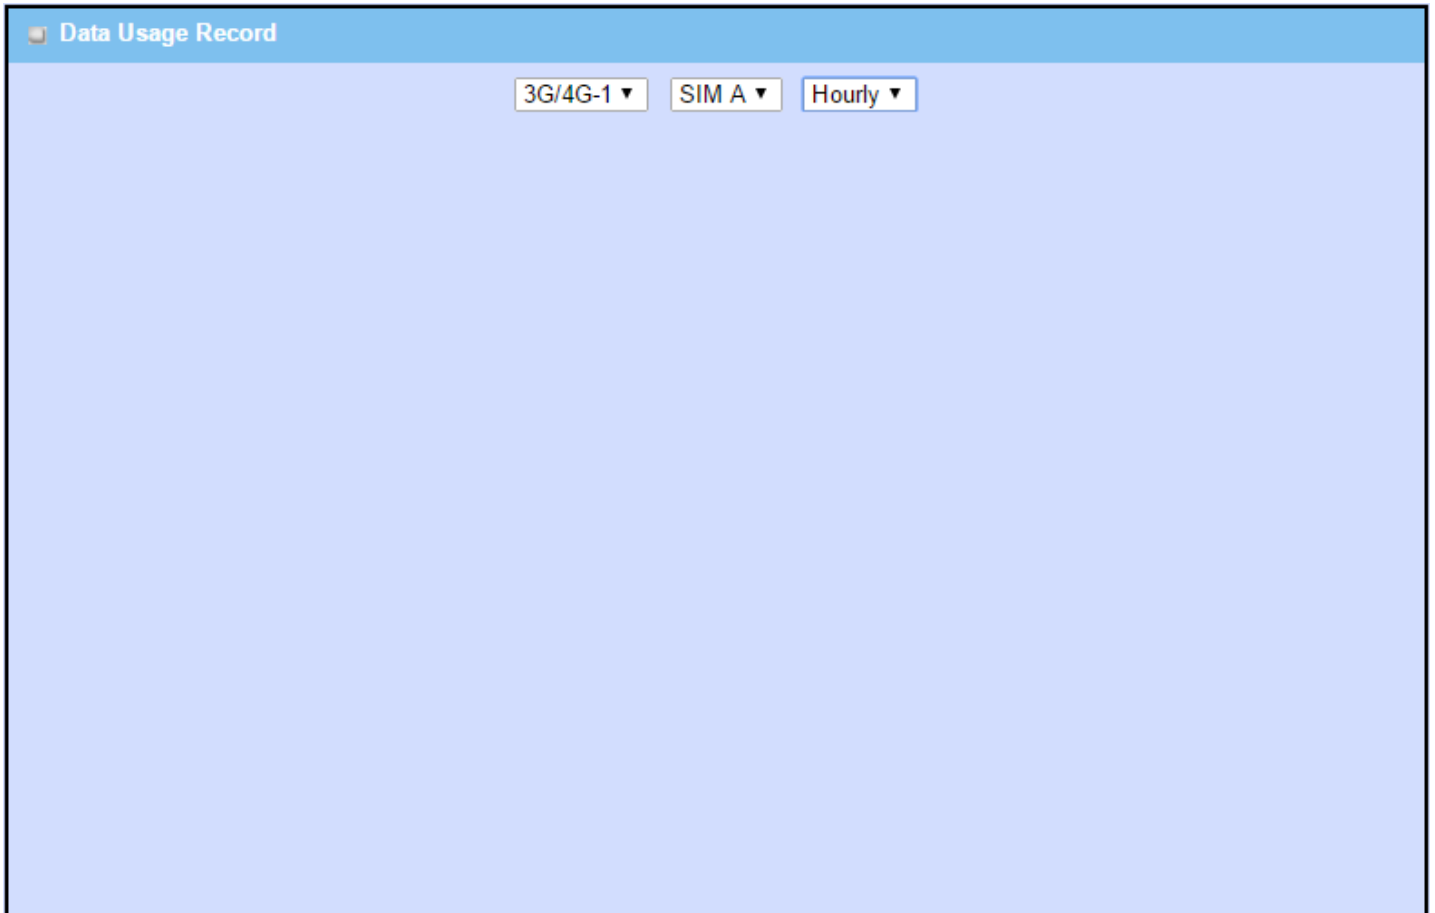

# M2M Cellular Gateway

---

## 8.5.4 Cellular Usage

Go to **Status > Statistics & Reports > Cellular Usage** tab.

**Cellular Usage** screen shows data usage statistics for the selected cellular interface. The cellular data usage can be accumulated per hour or per day.

# M2M Cellular Gateway

---
